## Executive Summary

TIERS Limited is a proposed development project located in the State of Kuwait, within the ABC sector. The project encompasses construction, commissioning, operation, and eventual closure phases. Its primary objective is to deliver the proposed facility while managing and controlling potential environmental and social impacts related to land use, resource consumption, emissions, waste generation, traffic, and community well-being throughout its lifecycle.

**Assessment Scope and Approach** The Environmental Impact Assessment (EIA) covers the full project lifecycle including construction, operation, and decommissioning phases. It assesses potential interactions with environmental and social receptors within the project footprint, associated facilities, transport routes, and the wider area potentially affected by indirect or cumulative effects. The assessment includes baseline studies, alternatives analysis, impact prediction, mitigation measures, monitoring programs, and compliance with applicable national and local regulations, international standards, and project commitments. The scope also addresses cumulative impacts, climate change considerations, stakeholder engagement, and decision readiness.

**Baseline Conditions** The baseline environment includes current land use, soils, water resources, air quality, noise levels, biodiversity and ecosystem services, cultural heritage, material assets, and socio-economic conditions, with attention to seasonal variations and vulnerable receptors. Data were collected through field surveys, specialist studies, and consultation records, covering the project footprint and surrounding areas. Sensitive receptors have been identified, and spatial and temporal boundaries for the baseline studies have been defined. However, final quantities, coordinates, and thresholds require confirmation against approved design data and authority requirements, indicating some data gaps and uncertainties remain.

**Key Environmental and Social Effects-** Land disturbance and habitat alteration during construction

- Increased traffic and associated emissions during construction and operation
- Resource consumption including water and energy use
- Generation of waste and emissions throughout project phases
- Potential impacts on biodiversity and ecosystem services
- Effects on nearby communities including social and health aspects
- Noise and air quality impacts during construction and operation
- Risks associated with decommissioning, accidents, and unplanned events

**Alternatives** The assessment includes a comprehensive alternatives analysis comparing the no-project scenario with feasible site locations, layout configurations, technologies, and operational processes. Each alternative was evaluated consistently against criteria such as land take, proximity to sensitive receptors, resource efficiency, pollution potential, climate resilience, community impacts, constructability, and cost. The preferred alternative was selected based on its ability to avoid or minimize environmental and social impacts prior to mitigation.

Documentation includes an alternatives matrix, reasons for rejecting options, and records of decision-maker inputs and consultation outcomes. Final design basis and layout remain to be confirmed for controlled issue.

**Mitigation and Monitoring** Mitigation follows a hierarchy of avoidance, minimization, restoration, and where necessary, compensation for residual significant effects. Specific, measurable commitments are linked to responsible parties, implementation phases, completion dates, performance indicators, and corrective action triggers. Measures include controlling land disturbance, managing emissions and waste, protecting biodiversity, minimizing traffic impacts, and engaging with communities. An Environmental and Social Management Plan (ESMP) outlines responsibilities, resources, and corrective actions. Monitoring programs define indicators, methods, locations, thresholds, frequency, reporting protocols, and response actions to ensure compliance and effectiveness of mitigation. The plan aligns with Kuwait Environment Public Authority regulations and other applicable legal requirements, subject to verification by qualified local professionals.

**Conclusion and Limitations** The EIA concludes that, with implementation of the preferred alternative and committed mitigation measures, residual environmental and social effects are expected to be manageable and within acceptable limits. The assessment supports decision-making by tracing conclusions to evidence and providing transparent documentation. Limitations include the need to confirm final design details, quantities, and thresholds against approved data and authority requirements. Data gaps and uncertainties have been identified and addressed where possible, but some residual uncertainty remains. The report emphasizes the importance of ongoing monitoring, stakeholder engagement, and adaptive management to address unforeseen impacts and ensure compliance throughout the project lifecycle.

# 1 EXECUTIVE SUMMARY

Structured EIA chapter

## 1.1 Non-Technical Executive Summary

**Assessment response**Demonstration scope: This illustrative response addresses whether non-technical executive summary. It shows the expected structure and level of explanation; project-specific values require verification.

TIERS Limited is presented as a proposed development at State of Kuwait / Kuwait. This demonstration assessment describes the construction, commissioning, operation and eventual closure activities that could interact with environmental and social receptors. The project need is to deliver the proposed facility while controlling land, resource, emissions, waste, traffic and community impacts through its full life cycle.

**Information to include in the controlled issue-** Confirm the final design basis, footprint, schedule and workforce profile.

- Insert approved layout drawings, access routes, utilities and temporary work areas.
- Quantify material, water, energy, waste, emission and traffic estimates by phase.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 1 — EXECUTIVE SUMMARY.

## 1.2 Key Impacts, Mitigation and Decision Readiness

**Assessment response**Demonstration scope: This illustrative response addresses whether key impacts, mitigation and decision readiness. It shows the expected structure and level of explanation; project-specific values require verification.

TIERS Limited is presented as a proposed development at State of Kuwait / Kuwait. This demonstration assessment describes the construction, commissioning, operation and eventual closure activities that could interact with environmental and social receptors. The project need is to deliver the proposed facility while controlling land, resource, emissions, waste, traffic and community impacts through its full life cycle.

**Information to include in the controlled issue-** Confirm the final design basis, footprint, schedule and workforce profile.

- Insert approved layout drawings, access routes, utilities and temporary work areas.
- Quantify material, water, energy, waste, emission and traffic estimates by phase.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 1 — EXECUTIVE SUMMARY.

# 2 PROJECT DESCRIPTION

Structured EIA chapter

## 2.1 Project Need, Objectives and Location

**Assessment response**Demonstration scope: This illustrative response addresses whether project need, objectives and location. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be

the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

## 2.2 Project Components, Layout and Design

Assessment responseDemonstration scope: This illustrative response addresses whether project components, layout and design. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

## 2.3 Construction, Operation and Decommissioning

Assessment responseDemonstration scope: This illustrative response addresses whether construction, operation and decommissioning. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

## 2.4 Inputs, Outputs, Emissions, Waste and Resources

Assessment responseDemonstration scope: This illustrative response addresses whether inputs, outputs, emissions, waste and resources. It shows the expected structure and level of explanation; project-specific values

require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsWaste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

## 2.5 Programme, Workforce and Associated Facilities

Assessment responseDemonstration scope: This illustrative response addresses whether programme, workforce and associated facilities. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

# 3 POLICY, LEGAL AND REGULATORY FRAMEWORK

Structured EIA chapter

## 3.1 Applicable National and Local Requirements

Assessment responseDemonstration scope: This illustrative response addresses whether applicable national and local requirements. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at State of Kuwait / Kuwait, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation

records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

### 3.2 International Standards and Project Commitments

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether international standards and project commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at State of Kuwait / Kuwait, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

**Evidence and limitations**  
Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

### 3.3 Permits, Approvals and Compliance Obligations

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether permits, approvals and compliance obligations. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at State of Kuwait / Kuwait, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

**Evidence and limitations**  
Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

## 4 ALTERNATIVES ASSESSMENT

Structured EIA chapter

### 4.1 No-Project Alternative

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether no-project alternative. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and

confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

## 4.2 Site, Design, Technology and Process Alternatives

Assessment responseDemonstration scope: This illustrative response addresses whether site, design, technology and process alternatives. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

## 4.3 Comparison and Selection of the Preferred Alternative

Assessment responseDemonstration scope: This illustrative response addresses whether comparison and selection of the preferred alternative. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

# 5 ENVIRONMENTAL AND SOCIAL BASELINE

## 5.1 Study Area, Methods, Sources and Limitations

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether study area, methods, sources and limitations. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

**Information to include in the controlled issue-** Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

**Evidence and limitations** Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

## 5.2 Physical Environment

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether physical environment. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

**Information to include in the controlled issue-** Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

**Evidence and limitations** Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

## 5.3 Biodiversity and Ecosystem Services

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether biodiversity and ecosystem services. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

**Information to include in the controlled issue-** Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

**Evidence and limitations** Seasonally appropriate ecological surveys, habitat maps, species records and conservation-status sources. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

## 5.4 Social, Health, Cultural Heritage and Land Use

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether social, health, cultural heritage and land use. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

**Information to include in the controlled issue-** Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

**Evidence and limitations** Census and livelihood data, stakeholder records, workforce estimates and grievance-management records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

## 5.5 Sensitive Receptors and Future Baseline

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether sensitive receptors and future baseline. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

**Information to include in the controlled issue-** Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

**Evidence and limitations** Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

# 6 IMPACT ASSESSMENT

Structured EIA chapter

## 6.1 Scoping and Assessment Methodology

**Assessment response**  
**Demonstration scope:** This illustrative response addresses whether scoping and assessment methodology. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at State of Kuwait / Kuwait. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

**Information to include in the controlled issue-** Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

## 6.2 Construction Impacts

Assessment response Demonstration scope: This illustrative response addresses whether construction impacts. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at State of Kuwait / Kuwait. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

## 6.3 Operational Impacts

Assessment response Demonstration scope: This illustrative response addresses whether operational impacts. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at State of Kuwait / Kuwait. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

## 6.4 Decommissioning, Accidents and Unplanned Events

Assessment response Demonstration scope: This illustrative response addresses whether decommissioning, accidents and unplanned events. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at State of Kuwait / Kuwait. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsWaste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

## 6.5 Impact Significance and Residual Effects

Assessment responseDemonstration scope: This illustrative response addresses whether impact significance and residual effects. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at State of Kuwait / Kuwait. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

# 7 MITIGATION AND ENVIRONMENTAL MANAGEMENT

Structured EIA chapter

## 7.1 Mitigation Hierarchy and Commitments

Assessment responseDemonstration scope: This illustrative response addresses whether mitigation hierarchy and commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The project is being assessed for the State of Kuwait. The regulatory register is anchored to official Kuwait Environment Public Authority sources, including Environmental Protection Law No. 42 of 2014 as amended by Law No. 99 of 2015 and the applicable KEPA executive regulations. Each requirement must be screened for project applicability and linked to source evidence, an assessment, identified gaps, actions and the authorised reviewer's decision before issue. KOC requirements apply only where the project, client or contract makes them applicable.

Information to include in the controlled issue- Confirm the current KEPA approval pathway, permits and executive regulations with a qualified Kuwait practitioner.

- Record why each KEPA, ministry, municipal or KOC requirement applies to the project.
- Complete the legal register with requirement, official source, version, evidence, assessment, gap, action and reviewer decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. The Kuwait legal register is a decision-support aid and must be verified by the authorised local professional before controlled issue.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

## 7.2 Environmental and Social Management Plan

Assessment responseDemonstration scope: This illustrative response addresses whether environmental and social management plan. It shows the expected structure and level of explanation; project-specific values require verification.

The project is being assessed for the State of Kuwait. The regulatory register is anchored to official Kuwait Environment Public Authority sources, including Environmental Protection Law No. 42 of 2014 as amended by Law No. 99 of 2015 and the applicable KEPA executive regulations. Each requirement must be screened for project applicability and linked to source evidence, an assessment, identified gaps, actions and the authorised reviewer's decision before issue. KOC requirements apply only where the project, client or contract makes them applicable.

Information to include in the controlled issue- Confirm the current KEPA approval pathway, permits and executive regulations with a qualified Kuwait practitioner.

- Record why each KEPA, ministry, municipal or KOC requirement applies to the project.
- Complete the legal register with requirement, official source, version, evidence, assessment, gap, action and reviewer decision.

Evidence and limitations Census and livelihood data, stakeholder records, workforce estimates and grievance-management records. The Kuwait legal register is a decision-support aid and must be verified by the authorised local professional before controlled issue.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

### 7.3 Responsibilities, Resources and Corrective Action

Assessment response Demonstration scope: This illustrative response addresses whether responsibilities, resources and corrective action. It shows the expected structure and level of explanation; project-specific values require verification.

The project is being assessed for the State of Kuwait. The regulatory register is anchored to official Kuwait Environment Public Authority sources, including Environmental Protection Law No. 42 of 2014 as amended by Law No. 99 of 2015 and the applicable KEPA executive regulations. Each requirement must be screened for project applicability and linked to source evidence, an assessment, identified gaps, actions and the authorised reviewer's decision before issue. KOC requirements apply only where the project, client or contract makes them applicable.

Information to include in the controlled issue- Confirm the current KEPA approval pathway, permits and executive regulations with a qualified Kuwait practitioner.

- Record why each KEPA, ministry, municipal or KOC requirement applies to the project.
- Complete the legal register with requirement, official source, version, evidence, assessment, gap, action and reviewer decision.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. The Kuwait legal register is a decision-support aid and must be verified by the authorised local professional before controlled issue.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

## 8 MONITORING PROGRAMME

Structured EIA chapter

### 8.1 Monitoring Indicators, Methods and Locations

Assessment response Demonstration scope: This illustrative response addresses whether monitoring indicators, methods and locations. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.

- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 8 — MONITORING PROGRAMME.

## 8.2 Thresholds, Frequency, Reporting and Response

Assessment responseDemonstration scope: This illustrative response addresses whether thresholds, frequency, reporting and response. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 8 — MONITORING PROGRAMME.

# 9 CUMULATIVE IMPACTS

Structured EIA chapter

## 9.1 Other Developments and Valued Receptors

Assessment responseDemonstration scope: This illustrative response addresses whether other developments and valued receptors. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 9 — CUMULATIVE IMPACTS.

## 9.2 Cumulative Effects, Mitigation and Residual Risk

**Assessment response**Demonstration scope: This illustrative response addresses whether cumulative effects, mitigation and residual risk. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 9 — CUMULATIVE IMPACTS.

## 10 CLIMATE, CARBON AND RESILIENCE

Structured EIA chapter

### 10.1 Greenhouse Gas Emissions and Mitigation

**Assessment response**Demonstration scope: This illustrative response addresses whether greenhouse gas emissions and mitigation. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Waste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 10 — CLIMATE, CARBON AND RESILIENCE.

### 10.2 Climate Risk, Adaptation and Resilience

**Assessment response**Demonstration scope: This illustrative response addresses whether climate risk, adaptation and resilience. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 10 — CLIMATE, CARBON AND RESILIENCE.

## 11 STAKEHOLDER AND CONSULTATION RECORD

Structured EIA chapter

### 11.1 Stakeholder Identification and Engagement

Assessment responseDemonstration scope: This illustrative response addresses whether stakeholder identification and engagement. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

### 11.2 Issues Raised, Responses and Commitments

Assessment responseDemonstration scope: This illustrative response addresses whether issues raised, responses and commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

### 11.3 Grievance and Ongoing Engagement

Assessment responseDemonstration scope: This illustrative response addresses whether grievance and ongoing engagement. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

## 12 COMPLIANCE MATRIX

Structured EIA chapter

### 12.1 Requirement-to-Evidence Compliance Matrix

Assessment responseDemonstration scope: This illustrative response addresses whether requirement-to-evidence compliance matrix. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 12 — COMPLIANCE MATRIX.

### 12.2 Outstanding Obligations and Actions

Assessment responseDemonstration scope: This illustrative response addresses whether outstanding obligations and actions. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 12 — COMPLIANCE MATRIX.

## 13 ENVIRONMENTAL INTELLIGENCE AND QA

Structured EIA chapter

### 13.1 Evidence Traceability and Quality Assurance

**Assessment response**Demonstration scope: This illustrative response addresses whether evidence traceability and quality assurance. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

#### Supporting evidence

EnviroQuant\_EIA\_Export\_Template\_Prototype.docx (supporting\_evidence)

### 13.2 Data Gaps, Uncertainty and AI Transparency

**Assessment response**Demonstration scope: This illustrative response addresses whether data gaps, uncertainty and ai transparency. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

### 13.3 Professional Review and Reviewer Decisions

**Assessment response**Demonstration scope: This illustrative response addresses whether professional review and reviewer decisions. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

## 14 CONCLUSIONS AND DECISION READINESS

Structured EIA chapter

### 14.1 Overall Conclusions and Residual Effects

Assessment responseDemonstration scope: This illustrative response addresses whether overall conclusions and residual effects. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 14 — CONCLUSIONS AND DECISION READINESS.

### 14.2 Conditions, Priority Actions and Decision Readiness

Assessment responseDemonstration scope: This illustrative response addresses whether conditions, priority actions and decision readiness. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 14 — CONCLUSIONS AND DECISION READINESS.

## A APPENDICES AND EVIDENCE REGISTER

Structured EIA chapter

### A.1 Appendix Schedule

**Assessment response**Demonstration scope: This illustrative response addresses whether appendix schedule. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

### A.2 Evidence Register

**Assessment response**Demonstration scope: This illustrative response addresses whether evidence register. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

**Evidence and limitations**Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

### A.3 Figures, Tables and Supporting Records

**Assessment response**Demonstration scope: This illustrative response addresses whether figures, tables and supporting records. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

## EVIDENCE TRACEABILITY & COMPLIANCE

Requirement → Evidence → Assessment → Finding → Gap → Recommendation

| Requirement                                                                                                                                      | Source                                                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                              | Action                                                                                                                                                                                                                                                                                               | Decision |
|--------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| REG-KW-005-SAMPL E-TR Executive Regulation on Biodiversity, Decision No. 3 of 2017: Maintain traceability for authorised environmental sampling  | REG-KW-005-SAMPLE-TR                                     | Missing | Sampling records with approved locations and periods; Sample type and counts documentation; Collection methods description; Identification of responsible researchers and technicians; Supporting permits or correspondence for sampling activities; Traceability linkage between sampling evidence and authorised sources                       | Include detailed sampling records and documentation demonstrating compliance with Decision No. 3 of 2017 requirements for traceability of authorised environmental sampling. Provide permits, collection methods, personnel identification, and sample details to fully address this checklist item. | Pending  |
| 1.1.1 Are the need and objectives of the project explained?                                                                                      | 1.1.1; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Clear statement of the project need; Explicit objectives of the project; Rationale for undertaking the project; Contextual background supporting the need; Stakeholder or decision-maker inputs on project need and objectives                                                                                                                   | Include a dedicated section clearly outlining the project need and objectives, supported by rationale and decision-making documentation. This should precede or accompany the alternatives assessment to provide context for the project.                                                            | Pending  |
| 1.1.2 Is the programme for implementation described (timeline, start/finish dates for construction, operation, commissioning, including phases)? | 1.1.2                                                    | Missing | Timeline for project implementation; Start and finish dates for construction; Start and finish dates for operation; Start and finish dates for commissioning; Description of project phases                                                                                                                                                      | Include a detailed programme section specifying the timeline and key dates for construction, operation, commissioning, and any phased implementation to fully address this checklist item.                                                                                                           | Pending  |
| 1.1.3 Are all main components of the project described?                                                                                          | 1.1.3                                                    | Missing | Explicit description of all main components of the project; Details on project layout and design specific to the project; Information on construction, operation, and decommissioning components; Inputs, outputs, emissions, waste, and resource details related to project components; Programme, workforce, and associated facilities details | Include a detailed description of all main project components, including their functions, layout, design, and interrelations, supported by project design drawings and specialist studies to fully address this checklist item.                                                                      | Pending  |

| Requirement                                                                                                                                                    | Source                                                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                             | Action                                                                                                                                                                                                                                                                              | Decision |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.1.4 Is the location of each project component identified (maps, plans, diagrams)?                                                                            | 1.1.4; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Explicit maps, plans, or diagrams showing the location of each project component; Clear identification and labeling of project components on spatial documents; Verification that final coordinates and thresholds are confirmed against approved design data and authority requirements                                                                                                        | Include detailed maps, plans, or diagrams that clearly identify the location of each project component. Ensure these spatial documents are referenced in the project description and verified against approved design data and authority requirements.                              | Pending  |
| 1.1.5 Is the layout of the site(s) described (ground levels, buildings, structures, underground works, storage, water features, planting, access, boundaries)? | 1.1.5                                                    | Missing | Description of ground levels; Description of buildings and structures; Description of underground works; Description of storage areas; Description of water features; Description of planting; Description of access routes; Description of site boundaries                                                                                                                                     | Include a detailed description of the site layout covering ground levels, buildings, structures, underground works, storage, water features, planting, access, and boundaries. Provide supporting project design drawings and field survey records to substantiate the description. | Pending  |
| 1.1.6 For tunneling and earthworks - are activities properly described?                                                                                        | 1.1.6; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Description of tunneling activities including methods, extent, and location; Description of earthworks activities including excavation, fill, and site preparation; Details on construction techniques related to tunneling and earthworks; Information on equipment and workforce involved in tunneling and earthworks; Schedules or timelines specific to tunneling and earthworks activities | Include a detailed description of tunneling and earthworks activities in the project description section, covering methods, extent, equipment, workforce, and schedules to fully address this checklist item.                                                                       | Pending  |
| 1.1.7 Are all construction activities described?                                                                                                               | 1.1.7                                                    | Missing | Detailed description of all construction activities including types, sequences, and methods; Information on construction phases and timelines; Details on construction equipment and workforce involved; Descriptions of temporary facilities or infrastructure required during construction                                                                                                    | Include a comprehensive description of all construction activities, covering the scope, methods, equipment, workforce, and schedule to fully address this checklist item.                                                                                                           | Pending  |
| 1.1.8 Are all operation activities described?                                                                                                                  | 1.1.8                                                    | Missing | Detailed description of all operation activities; Specific operational procedures, schedules, and processes; Information on operational equipment and workforce roles during operation phase                                                                                                                                                                                                    | Include a comprehensive description of all operation activities, detailing procedures, schedules, equipment used, and workforce roles during the operation phase to fully address the checklist item.                                                                               | Pending  |

| Requirement                                                                                                                                      | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                              | Action                                                                                                                                                                                                                                                                                            | Decision |

| 1.2.1 Is the area of land occupied by permanent components quantified and shown on scaled maps?                             | 1.2.1                                                    | Missing | Quantification of land area occupied by permanent components; Scaled maps showing the land area occupied by permanent components; Specific data or figures related to land take for permanent infrastructure                                                                     | Include detailed quantification of the land area occupied by permanent project components and provide scaled maps illustrating these areas as part of the project description section.                                                                                                                                                     | Pending  |
| 1.3.1 Is the area of land required temporarily for construction quantified and mapped?                                      | 1.3.1; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Quantification of the area of land required temporarily for construction; Maps or drawings showing the temporary land use area during construction; Specific data or figures on land area measurements for construction activities                                               | Include detailed project design drawings or maps that clearly quantify and illustrate the temporary land area required for construction. Provide measurements and spatial data to support the assessment.                                                                                                                                  | Pending  |
| 1.3.7 For displacement projects - numbers and characteristics of displaced people/businesses described?                     | 1.3.7; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Description of displacement impacts; Numbers of displaced people and businesses; Characteristics of displaced people and businesses; Mitigation measures related to displacement                                                                                                 | Include a dedicated subsection in the project description or social impact assessment that details the numbers and characteristics of displaced people and businesses, if applicable. Provide evidence from surveys, consultations, or specialist studies to support this information.                                                     | Pending  |
| 1.3.2 Is restoration and after-use of temporarily occupied land described?                                                  | 1.3.2                                                    | Missing | Description of restoration measures for temporarily occupied land; After-use plans for temporarily occupied land; Mitigation measures to restore land post-construction; Timelines and responsibilities for land restoration; Monitoring and maintenance plans for restored land | Include a dedicated subsection in the project description or construction /decommissioning sections that details the restoration and after-use plans for temporarily occupied land. This should cover the methods, timelines, responsible parties, and monitoring to ensure land is returned to a suitable condition after temporary use.  | Pending  |
| 1.3.4 Is the size of structures/works identified (floor area, height, excavations, embankments, stacks, water depth, etc.)? | 1.3.4                                                    | Missing | Explicit identification of floor area for structures; Height measurements of buildings or stacks; Details on excavations and embankments dimensions; Water depth specifications where applicable; Quantitative size data or design drawings referencing these sizes              | Include detailed descriptions and quantitative data on the size of all relevant structures and works in the project description section. Provide design drawings or tables specifying floor areas, heights, excavation volumes, embankment dimensions, stack heights, and water depths as applicable to fully address this checklist item. | Pending  |

| Requirement                                                                                                | Source                                                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                         | Action                                                                                                                                                                                                                                                                                                                                       | Decision |
|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.3.5 Is the form and appearance of structures described (materials, colors, design, plant species, etc.)? | 1.3.5                                                    | Missing | Description of materials used in structures; Colors of structures; Design details of structures; Plant species to be used in landscaping or around structures                                                                                                                                                                                                               | Include a detailed description of the form and appearance of all project structures, specifying materials, colors, design features, and landscaping plant species to fully address this checklist item.                                                                                                                                      | Pending  |
| 1.3.6 For urban projects - numbers and characteristics of new populations/businesses described?            | 1.3.6; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Description of numbers of new populations associated with the project; Characteristics of new populations (e.g., demographics, socio-economic status); Description of numbers of new businesses associated with the project; Characteristics of new businesses (e.g., type, size, sector); Any projections or estimates of population or business growth due to the project | Include a dedicated subsection in the project description that quantifies and characterizes the new populations and businesses expected to be introduced or affected by the urban project. This should include demographic data, business types, sizes, and any relevant socio-economic characteristics to fully address the checklist item. | Pending  |
| 1.3.8 For transport projects - type, volume, temporal pattern, and distribution of traffic described?      | 1.3.8                                                    | Missing | Description of traffic type (e.g., vehicle types); Traffic volume (e.g., number of vehicles); Temporal pattern of traffic (e.g., peak hours, seasonal variations); Distribution of traffic (e.g., spatial distribution, routes)                                                                                                                                             | Include a dedicated subsection in the project description that details the type, volume, temporal pattern, and distribution of traffic associated with the transport project. This should be supported by traffic studies, surveys, or modeling data to fully address the checklist item.                                                    | Pending  |
| 1.4.1 Are all operating processes described (manufacturing, extraction, etc.)?                             | 1.4.1                                                    | Missing | Detailed description of all operating processes (manufacturing, extraction, etc.); Process flow diagrams or stepwise explanation of operations; Information on technology or methods used in operations; Details on operational parameters and controls                                                                                                                     | Include a dedicated subsection that thoroughly describes all operating processes involved in the project, supported by process flow diagrams and technical details to fully address this checklist item.                                                                                                                                     | Pending  |
| 1.4.2 Are types and quantities of outputs described?                                                       | 1.4.2                                                    | Missing | Description of types of outputs; Quantities of outputs produced by the project; Supporting data or calculations for output quantities                                                                                                                                                                                                                                       | Include a detailed description of the types and quantities of outputs expected from the project, supported by data or calculations, to fully address this checklist item.                                                                                                                                                                    | Pending  |

| Requirement                                                                  | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                         | Action                                                                                                                                                                                                                                                                                                                                                                                   | Decision |
|------------------------------------------------------------------------------|--------|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.4.3 Are types and quantities of raw materials and energy needed discussed? | 1.4.3  | Missing | Identification and quantification of raw materials required; Identification and quantification of energy sources and amounts needed; Discussion of raw material sourcing and consumption rates; Energy consumption estimates during construction and operation phases                                                                                                                                       | Include a dedicated subsection or detailed content within the project description that specifies the types and quantities of raw materials and energy required for the project. This should include estimates for construction and operational phases, sources of materials and energy, and any relevant efficiency or conservation measures.                                            | Pending  |
| 1.4.4 Are environmental implications of sourcing raw materials discussed?    | 1.4.4  | Missing | Discussion of raw material types and quantities to be sourced; Assessment of environmental impacts from raw material extraction and transportation; Consideration of sustainable sourcing options or alternatives; Mitigation measures to reduce environmental impacts from raw material sourcing; Evidence such as supplier information, sourcing locations, or specialist studies on raw material impacts | Include a dedicated subsection in the project description or inputs section that addresses the sourcing of raw materials. This should cover types and quantities of raw materials, environmental impacts of their extraction and transport, alternatives considered, and mitigation strategies. Supporting evidence such as supplier data and specialist assessments should be provided. | Pending  |
| 1.4.5 Is efficiency in use of energy and raw materials discussed?            | 1.4.5  | Missing | Discussion of energy efficiency measures in project design and operation; Assessment of raw material efficiency and conservation strategies; Comparative analysis of alternatives based on resource efficiency; Quantitative or qualitative data on energy and raw material consumption and savings; Mitigation or enhancement measures to improve efficiency                                               | Include a dedicated subsection in the project description or inputs/outputs section that explicitly discusses energy and raw material efficiency. Provide data, analysis, and alternatives comparison focused on resource efficiency to fully address this checklist item.                                                                                                               | Pending  |

| Requirement                                                                                       | Source                                                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                  | Action                                                                                                                                                                                                                                                                                                                                                                      | Decision |
|---------------------------------------------------------------------------------------------------|----------------------------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.5.1 Are hazardous materials identified and quantified (construction, operation, commissioning)? | 1.5.1                                                    | Missing | Identification of hazardous materials used or stored during construction, operation, and commissioning; Quantification of hazardous materials including types, volumes, and concentrations; Safety studies or risk assessments related to hazardous materials; Documentation or inventories of hazardous substances; Mitigation measures or management plans for hazardous materials | Include a dedicated section or subsection in the project description that explicitly identifies and quantifies hazardous materials associated with all project phases. Provide inventories, safety assessments, and management plans to fully address this checklist item.                                                                                                  | Pending  |
| 1.5.2 Is transport of raw materials and traffic movements discussed?                              | 1.5.2                                                    | Missing | Discussion of transport of raw materials; Traffic movement assessment during construction and operation; Traffic impact mitigation measures; Details on transport routes, vehicle types, frequency, and timing; Assessment of potential impacts on local traffic and communities                                                                                                     | Include a dedicated subsection within the project description or construction and operation sections that details the transport of raw materials and associated traffic movements. This should cover transport routes, vehicle types and numbers, timing, potential impacts on local traffic and communities, and proposed mitigation measures to minimize adverse effects. | Pending  |
| 1.5.3 Is employment created or lost discussed (by phase)?                                         | 1.5.3                                                    | Missing | Discussion of employment created or lost during construction phase; Discussion of employment created or lost during operation phase; Discussion of employment created or lost during decommissioning phase; Quantitative or qualitative data on workforce changes by phase; Assessment of social impacts related to employment changes                                               | Include a dedicated subsection in the project description or programme section that explicitly discusses employment impacts by phase, supported by quantitative or qualitative data and analysis.                                                                                                                                                                           | Pending  |
| 1.5.4 Are access arrangements and worker/visitor traffic movements estimated?                     | 1.5.4; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Description of access arrangements to the project site; Estimates or projections of worker traffic movements during construction and operation; Estimates or projections of visitor traffic movements; Traffic management plans or assessments related to worker/visitor movements                                                                                                   | Include a dedicated subsection detailing access arrangements and provide quantitative or qualitative estimates of worker and visitor traffic movements during all project phases. Incorporate traffic management measures if applicable.                                                                                                                                    | Pending  |

| Requirement                                                          | Source                                                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Action                                                                                                                                                                                                                                                                                                           | Decision |
|----------------------------------------------------------------------|----------------------------------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.5.5 Is housing and services for employees discussed (if relevant)? | 1.5.5; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Discussion of employee housing provisions; Description of services available to employees (e.g., healthcare, recreation, transport); Assessment of relevance of employee housing to the project; Alternatives or options considered for employee housing and services; Consultation or stakeholder input regarding employee housing and services                                                                                                                           | Include a dedicated subsection in the project description or workforce and associated facilities section that explicitly addresses housing and services for employees, supported by relevant design documents, consultation records, and assessments of alternatives if applicable.                              | Pending  |
| 1.5.6 Are types and quantities of solid waste identified (by phase)? | 1.5.6                                                    | Missing | Identification of solid waste types generated during construction phase; Quantities of solid waste expected during construction phase; Identification of solid waste types generated during operation phase; Quantities of solid waste expected during operation phase; Identification of solid waste types generated during decommissioning phase; Quantities of solid waste expected during decommissioning phase; Waste classification and handling procedures by phase | Include a detailed inventory of solid waste types and quantities expected during each project phase (construction, operation, decommissioning). This should be supported by waste management plans and aligned with regulatory requirements to ensure proper assessment and mitigation of waste-related impacts. | Pending  |
| 1.6.5 Composition and hazards of liquid effluents discussed?         | 1.6.5                                                    | Missing | Description of liquid effluent types generated by the project; Chemical and physical composition of liquid effluents; Identification of hazardous substances in effluents; Assessment of potential environmental and health hazards from effluents; Mitigation measures for managing effluent hazards; Monitoring plans for effluent quality                                                                                                                               | Include a dedicated subsection detailing the composition and hazards of liquid effluents expected from the project. Provide chemical analyses, hazard identification, and risk assessments. Outline mitigation and monitoring strategies to manage effluent impacts.                                             | Pending  |

| Requirement                                                                                             | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                               | Action                                                                                                                                                                                                                                                                                                 | Decision |

| 1.6.1 Composition and hazards of solid wastes discussed?                                                | 1.6.1  | Missing | Description of solid waste types generated by the project; Characterization of hazardous properties of solid wastes; Quantities and composition of solid wastes; Potential environmental and health hazards from solid wastes; Management and mitigation measures for solid wastes                                                                                                                                | Include a dedicated subsection detailing the types, quantities, and hazardous characteristics of solid wastes generated by the project, along with proposed management and mitigation strategies to address associated risks.                                                                          | Pending  |
| 1.6.2 Methods for collecting, storing, treating, transporting, and disposing of solid wastes described? | 1.6.2  | Missing | Description of methods for collecting solid wastes; Description of methods for storing solid wastes; Description of methods for treating solid wastes; Description of methods for transporting solid wastes; Description of methods for disposing of solid wastes                                                                                                                                                 | Include a dedicated subsection detailing the procedures and methods for solid waste management throughout the project lifecycle, covering collection, storage, treatment, transportation, and disposal, supported by relevant permits, contractor records, and compliance with authority requirements. | Pending  |
| 1.6.3 Locations for final disposal of solid wastes discussed?                                           | 1.6.3  | Missing | Identification and description of final disposal locations for solid wastes; Assessment of suitability and environmental impact of disposal sites; Compliance with regulatory requirements for waste disposal; Plans or measures for managing solid waste disposal                                                                                                                                                | Include a dedicated subsection detailing the locations for final disposal of solid wastes, including site descriptions, environmental assessments, and compliance with relevant regulations.                                                                                                           | Pending  |
| 1.6.4 Types and quantities of liquid effluents identified (by phase)?                                   | 1.6.4  | Missing | Identification of types of liquid effluents by project phase; Quantities of liquid effluents expected during construction phase; Quantities of liquid effluents expected during operation phase; Quantities of liquid effluents expected during decommissioning phase; Description of effluent sources and characteristics; Supporting data such as calculations, measurements, or estimates for effluent volumes | Include a dedicated subsection detailing the types and quantities of liquid effluents expected during each project phase, supported by quantitative data and references to design or specialist studies.                                                                                               | Pending  |

| Requirement                                                                                                 | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                | Action                                                                                                                                                                                                                                                                                                                                                                                                             | Decision |
|-------------------------------------------------------------------------------------------------------------|--------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.6.6 Methods for collecting, storing, treating, transporting, and disposing of liquid effluents described? | 1.6.6  | Missing | Description of methods for collecting liquid effluents; Description of methods for storing liquid effluents; Description of methods for treating liquid effluents; Description of methods for transporting liquid effluents; Description of methods for disposing of liquid effluents                                                                                                              | Include a dedicated subsection in the project description or inputs/outputs section detailing the methods for collecting, storing, treating, transporting, and disposing of liquid effluents. This should include technical descriptions, equipment used, treatment processes, storage facilities, transportation logistics, disposal methods, and compliance with relevant environmental regulations.             | Pending  |
| 1.6.7 Locations for final disposal of liquid effluents discussed?                                           | 1.6.7  | Missing | Identification and description of locations for final disposal of liquid effluents; Assessment of environmental impacts related to effluent disposal sites; Alternatives analysis for effluent disposal locations; Compliance with regulatory requirements for effluent disposal; Mitigation measures for effluent disposal impacts; Consultation or stakeholder input regarding effluent disposal | Include a dedicated subsection in the EIA report that identifies and describes the locations for final disposal of liquid effluents. This should cover site selection rationale, environmental impact assessment of disposal methods and locations, alternatives considered, regulatory compliance, and proposed mitigation measures. Consultation records related to effluent disposal should also be documented. | Pending  |
| 1.6.8 Types and quantities of gaseous and particulate emissions identified (by phase)?                      | 1.6.8  | Missing | Identification of types of gaseous emissions by project phase; Quantification of gaseous emissions by project phase; Identification of types of particulate emissions by project phase; Quantification of particulate emissions by project phase; Emissions calculations or inventories; Supporting specialist studies or monitoring plans related to emissions                                    | Include a dedicated subsection detailing the types and quantities of gaseous and particulate emissions expected during each project phase (construction, operation, decommissioning). Provide emissions inventories, calculations, or specialist study summaries to support the assessment. Ensure data is verified against approved design and regulatory requirements.                                           | Pending  |

| Requirement                                                                                              | Source | Finding | Gap                                                                                                                                                                                                                                                                                                            | Action                                                                                                                                                                                                                                                                                                                                                   | Decision |
|----------------------------------------------------------------------------------------------------------|--------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.6.9 Composition and hazards of air emissions discussed?                                                | 1.6.9  | Missing | Identification and quantification of air emissions; Description of the chemical composition of air emissions; Assessment of hazards associated with air emissions; Mitigation measures for air emissions hazards; Supporting data such as emissions calculations or specialist air quality studies             | Include a dedicated subsection detailing the composition and hazards of air emissions, supported by emissions inventories, specialist studies, and hazard assessments to fully address this checklist item.                                                                                                                                              | Pending  |
| 1.6.11 Locations and characteristics of air discharges identified (stack height, velocity, temperature)? | 1.6.11 | Missing | Identification of air discharge locations; Stack height specifications; Stack gas velocity data; Stack gas temperature data; Description of air emission points and characteristics                                                                                                                            | Include detailed descriptions and specifications of all air discharge points, including stack height, velocity, and temperature, supported by design drawings and emission data to enable proper air quality impact assessment.                                                                                                                          | Pending  |
| 1.6.12 Potential for resource recovery from wastes discussed?                                            | 1.6.12 | Missing | Discussion of potential for resource recovery from wastes; Identification of waste streams suitable for recovery; Assessment of technologies or methods for resource recovery; Evaluation of environmental benefits of resource recovery; Plans or commitments for implementing resource recovery measures     | Include a dedicated subsection in the EIA report that evaluates the potential for resource recovery from project-generated wastes, supported by waste inventories and relevant studies.                                                                                                                                                                  | Pending  |
| 1.6.13 Sources of noise, heat, light, or electromagnetic radiation identified and quantified?            | 1.6.13 | Missing | Identification of noise sources; Quantification of noise levels; Identification of heat sources; Quantification of heat emissions; Identification of light sources; Quantification of light emissions; Identification of electromagnetic radiation sources; Quantification of electromagnetic radiation levels | Include a dedicated section or subsection in the project description or environmental baseline that identifies and quantifies all sources of noise, heat, light, and electromagnetic radiation associated with the project during construction, operation, and decommissioning phases. Use specialist studies or measurements to support quantification. | Pending  |

| Requirement                                                                                                                                        | Source                                                    | Finding | Gap                                                                                                                                                                                                                                                                      | Action                                                                                                                                                                                                                                                                                                                                                                                 | Decision |

| 1.6.14 Methods for estimating residues/emissions and difficulties discussed?                                                                       | 1.6.14; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing | Description of methods used to estimate residues and emissions; Discussion of difficulties or uncertainties in estimating residues and emissions; Supporting data or references for estimation methods                                                                   | Include a detailed section describing the methods used for estimating residues and emissions, along with a discussion of any difficulties or uncertainties encountered. Provide supporting data, calculations, or references to specialist studies to substantiate the methods and address potential limitations.                                                                      | Pending  |
| 1.6.15 Uncertainty attached to estimates discussed?                                                                                                | 1.6.15                                                    | Missing | Discussion of uncertainty attached to estimates; Quantification or qualitative description of uncertainty; Sensitivity analysis or confidence intervals; Limitations of data or assumptions in estimates; Reference to uncertainty in specialist studies or calculations | Include a dedicated subsection discussing the uncertainty attached to key estimates in the project description and related assessments. This should cover the nature and sources of uncertainty, methods used to quantify or qualify it, and implications for decision-making.                                                                                                         | Pending  |
| 1.7.1 Are risks associated with the project discussed (hazardous materials, spills, fire, explosion, traffic, process failure, natural disasters)? | 1.7.1                                                     | Missing | Discussion of hazardous materials risks; Assessment of spill risks; Fire and explosion risk analysis; Traffic risk considerations; Process failure risks; Natural disaster risk assessment and mitigation measures                                                       | Include a dedicated subsection within the project description or a related section that explicitly identifies and discusses all relevant project risks, including hazardous materials, spills, fire, explosion, traffic, process failure, and natural disasters. Provide evidence such as safety studies, risk assessments, and mitigation plans to fully address this checklist item. | Pending  |
| 1.7.2 Are measures to prevent and respond to accidents described (prevention, training, contingency, emergency plans)?                             | 1.7.2                                                     | Missing | Description of accident prevention measures; Training programs for accident prevention and response; Contingency plans for potential accidents; Emergency response plans and procedures                                                                                  | Include a dedicated subsection detailing accident prevention measures, training protocols, contingency planning, and emergency response plans to fully address checklist item 1.7.2.                                                                                                                                                                                                   | Pending  |

| Requirement                                                                                              | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                                 | Action                                                                                                                                                                                                                                                                                                                                     | Decision |
|----------------------------------------------------------------------------------------------------------|--------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 2.1 Is the process by which the project was developed described, and are alternatives considered?        | 2.1    | Needs Improvement | Description of the process by which the project was developed; Identification and description of specific alternatives considered (including no-project alternative); Comparison of alternatives with rationale for selection of preferred alternative; Evidence such as project design drawings, specialist studies, consultation records specific to this project | Include a detailed narrative describing how the project was developed, the alternatives considered (site, design, technology, process, and no-project), and the rationale for selecting the preferred alternative. Provide supporting evidence such as design documents, studies, and consultation records to substantiate the assessment. | Pending  |
| 2.2 Are the alternatives realistic and genuine?                                                          | 2.2    | Needs Improvement | Specific description of alternatives considered; Evidence of feasibility and realism of each alternative; Demonstration that alternatives are genuine options rather than token choices; Comparative analysis showing meaningful differences among alternatives; Stakeholder consultation or expert input validating alternatives                                   | Include detailed descriptions and evaluations of each alternative demonstrating their realism and genuineness, supported by evidence such as feasibility studies, stakeholder input, and comparative analysis.                                                                                                                             | Pending  |
| 2.3 Are the main reasons for choice of the proposed project explained (including environmental reasons)? | 2.3    | Needs Improvement | Explicit explanation of main reasons for choosing the proposed project; Inclusion of environmental reasons for project selection; Comparison summary highlighting why the preferred alternative was selected over others                                                                                                                                            | Include a clear and detailed explanation of the main reasons for selecting the proposed project, explicitly addressing environmental factors and how they influenced the decision. Provide a comparative summary of alternatives to justify the choice.                                                                                    | Pending  |

| Requirement                                                                                    | Source                                                   | Finding             | Gap                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Action                                                                                                                                                                                                                                                                                                                                                                | Decision |
|------------------------------------------------------------------------------------------------|----------------------------------------------------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 2.4 Are the main environmental effects of the alternatives compared with the proposed project? | 2.4                                                      | Partially Compliant | Project-specific impact register linking activities, pathways, receptors, and significance ratings for each alternative and the proposed project; Explicit comparative analysis of main environmental effects across alternatives and the proposed project; Quantitative or qualitative data supporting the comparison; Clear statement of prediction methods and assessment criteria applied consistently across alternatives; Separation of pre-mitigation and residual effects for all alternatives and the proposed project | Incorporate detailed, project-specific comparative data on environmental effects of each alternative and the proposed project, including impact registers and significance ratings. Ensure consistent application of prediction methods and assessment criteria, and clearly distinguish pre- and post-mitigation effects to fully satisfy the checklist requirement. | Pending  |
| 3.1.1 Existing land uses and people using the land described?                                  | 3.1.1; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing             | Description of existing land uses in the project area; Identification and characterization of people using the land; Supporting data such as maps, census data, or stakeholder consultation results related to land use                                                                                                                                                                                                                                                                                                         | Include a detailed description of existing land uses and the people using the land within the project area, supported by relevant data such as census information, livelihood data, stakeholder consultation records, and land use maps.                                                                                                                              | Pending  |
| 3.1.2 Topography, geology, and soils described?                                                | 3.1.2                                                    | Missing             | Description of topography including landforms and terrain features; Geological information such as rock types, structures, and geotechnical conditions; Soil types, properties, distribution, and any relevant soil surveys or classifications; Maps or figures illustrating topography, geology, and soils; References to field surveys, specialist studies, or authoritative sources on these topics                                                                                                                          | Include a dedicated subsection describing the topography, geology, and soils of the project area, supported by relevant maps, field survey data, and specialist reports to fully address this checklist item.                                                                                                                                                         | Pending  |

| Requirement                                                                                                                   | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                  | Action                                                                                                                                                                                                                                                                                                                                            | Decision |
|-------------------------------------------------------------------------------------------------------------------------------|--------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 3.1.3 Significant topographic/geological features and soil conditions (quality, stability, erosion, contamination) described? | 3.1.3  | Missing | Description of significant topographic features; Description of significant geological features; Assessment of soil quality; Assessment of soil stability; Information on soil erosion potential; Information on soil contamination status                                                                                                                           | Include a dedicated subsection detailing the significant topographic and geological features of the project area, along with comprehensive information on soil conditions including quality, stability, erosion risks, and contamination status. This should be supported by field survey data, specialist studies, and relevant maps or reports. | Pending  |
| 3.1.4 Fauna, flora, and habitats described and mapped?                                                                        | 3.1.4  | Missing | Descriptions of fauna present in the study area; Descriptions of flora present in the study area; Habitat descriptions relevant to the project area; Maps illustrating the distribution of fauna, flora, and habitats; Seasonally appropriate ecological survey data; Species records and conservation status information                                            | Include detailed descriptions and mapped data of fauna, flora, and habitats based on ecological surveys and species records to fully address this checklist item.                                                                                                                                                                                 | Pending  |
| 3.1.5 Species populations and protected areas/species defined?                                                                | 3.1.5  | Missing | Identification and description of species populations in the study area; Definition and mapping of protected areas relevant to the project; Listing or description of protected species potentially affected; Specific survey or study results on species populations and protected areas; Commitments or mitigation measures related to species and protected areas | Include detailed, project-specific information on species populations and protected areas/species, supported by ecological surveys, habitat maps, and conservation status data. Define protected areas and species clearly and link to mitigation commitments.                                                                                    | Pending  |
| 3.1.6 Water environment described?                                                                                            | 3.1.6  | Missing | Description of surface water bodies (rivers, lakes, wetlands) in the study area; Hydrological characteristics and flow regimes; Water quality baseline data; Aquatic ecosystem and habitat information; Potential water-related receptors and uses; Relevant permits or regulatory standards for water environment                                                   | Include a dedicated subsection describing the water environment within the study area, supported by field surveys, hydrological data, water quality measurements, and relevant regulatory context. Add commitments for monitoring and mitigation related to water resources.                                                                      | Pending  |

| Requirement                                                           | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                  | Action                                                                                                                                                                                                                                                  | Decision |
|-----------------------------------------------------------------------|--------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 3.1.7 Hydrology, water quality, and water uses described?             | 3.1.7  | Missing | Description of hydrology including surface and groundwater features; Water quality data and baseline conditions; Current water uses by communities or industries; Potential impacts on water resources; Monitoring plans for hydrology and water quality                                                                                                                                             | Include a dedicated subsection describing the hydrology of the project area, baseline water quality data, and current water uses. Add relevant monitoring and mitigation commitments linked to water resources.                                         | Pending  |
| 3.1.8 Local climate, meteorology, and air quality described?          | 3.1.8  | Missing | Description of local climate characteristics (temperature, precipitation, seasonal patterns); Meteorological data including wind patterns, humidity, atmospheric pressure; Baseline air quality data including pollutant concentrations and sources; Assessment of air quality trends or issues in the project area; References to relevant meteorological or air quality studies or monitoring data | Include a dedicated subsection in the environmental baseline describing local climate, meteorology, and air quality. This should incorporate relevant data, monitoring results, and analysis to establish the baseline conditions for the project area. | Pending  |
| 3.1.9 Existing noise climate described?                               | 3.1.9  | Missing | Description of existing noise climate including ambient noise levels; Noise measurement data or survey results; Identification of noise sources in the study area; Baseline noise monitoring locations and methods; Analysis of noise sensitive receptors in relation to noise climate                                                                                                               | Include a dedicated subsection describing the existing noise climate with baseline noise measurements, sources, and monitoring methodology to fully address this checklist item.                                                                        | Pending  |
| 3.1.10 Existing light, heat, and electromagnetic radiation described? | 3.1.10 | Missing | Description of existing ambient light levels; Description of existing heat conditions or thermal environment; Description of existing electromagnetic radiation levels; Baseline measurements or monitoring data for light, heat, and electromagnetic radiation; References to specialist studies or surveys addressing these parameters                                                             | Include a dedicated subsection describing baseline conditions of ambient light, heat, and electromagnetic radiation in the study area, supported by field measurements or specialist studies. Define monitoring methods and thresholds if applicable.   | Pending  |

| Requirement                                                                                                | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                 | Action                                                                                                                                                                                                                                                                                      | Decision |
|------------------------------------------------------------------------------------------------------------|--------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 3.1.11 Material assets (buildings, minerals, water resources) described?                                   | 3.1.11 | Missing | Description of existing buildings and infrastructure within the project area; Identification and description of mineral resources present; Assessment and description of water resources (surface and groundwater) in the study area; Relevant data sources or surveys related to material assets; Commitments or mitigation measures related to material assets                                    | Include a dedicated subsection describing material assets in the environment likely to be affected, covering buildings, minerals, and water resources. Use relevant surveys, maps, and data to support the description. Link this information to potential impacts and mitigation measures. | Pending  |
| 3.2.1 Archaeological, historic, architectural, or cultural features described (including protected sites)? | 3.2.1  | Missing | Description of archaeological features in the study area; Description of historic features and sites; Description of architectural features and heritage buildings; Identification and description of protected cultural sites; Specialist studies or surveys on cultural heritage; Consultation records with heritage authorities or communities; Mitigation measures related to cultural heritage | Include a dedicated subsection describing archaeological, historic, architectural, and cultural heritage features, supported by specialist surveys and consultation records. Provide details on protected sites and outline mitigation commitments with accountable owners and timelines.   | Pending  |
| 3.2.2 Demographic, social, and socio-economic conditions described?                                        | 3.2.2  | Missing | Demographic data for the study area; Social conditions description; Socio-economic conditions description; Relevant census or livelihood data; Stakeholder and community profiles                                                                                                                                                                                                                   | Include detailed demographic, social, and socio-economic baseline information for the study area, supported by relevant data sources such as census data, livelihood studies, and stakeholder consultations to fully address this checklist item.                                           | Pending  |
| 3.2.3 Future changes in the environment without the project (No Project / Moving Baseline) described?      | 3.2.3  | Missing | Description of future environmental changes expected without the project (no project scenario); Analysis or projection of moving baseline conditions; Specific information on how the environment is likely to evolve over time without the project intervention                                                                                                                                    | Include a dedicated subsection or content explicitly describing the future baseline scenario, detailing expected environmental changes without the project, supported by relevant data or projections.                                                                                      | Pending  |

| Requirement                                                      | Source                                                   | Finding           | Gap                                                                                                                                                                                                                                                                    | Action                                                                                                                                                                                                                                                                                                                                            | Decision |
|------------------------------------------------------------------|----------------------------------------------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 3.3.1 Study area defined widely enough?                          | 3.3.1                                                    | Missing           | Explicit definition of the study area boundaries; Justification or rationale for the chosen study area extent; Description of how the study area encompasses all relevant environmental and social receptors; Evidence supporting the adequacy of the study area scope | Include a clear and detailed description of the study area boundaries and provide justification for why the area is defined widely enough to capture all potential impacts. Add supporting evidence such as maps, coordinates, and references to relevant guidelines or standards.                                                                | Pending  |
| 3.3.2 All relevant agencies contacted?                           | 3.3.2                                                    | Missing           | Explicit identification and listing of all relevant agencies contacted; Documentation or records of agency consultations; Details on the scope and outcomes of agency engagement; Commitments or follow-up actions resulting from agency input                         | Include a dedicated subsection or detailed statements confirming that all relevant agencies have been contacted, supported by consultation records and documentation. Specify which agencies were involved, the nature of their input, and any commitments arising from these consultations to strengthen the environmental baseline description. | Pending  |
| 3.3.3 Sources of data adequately referenced?                     | 3.3.3                                                    | Needs Improvement | Explicit citations or references to data sources used in the assessment; A bibliography or reference list of data sources; Clear linkage between data presented and their sources                                                                                      | Include explicit citations and references for all data sources used in the environmental baseline description. Provide a bibliography or reference list and ensure all data and evidence are clearly linked to their sources to fully address this checklist item.                                                                                | Pending  |
| 3.3.4 Survey methods, difficulties, and uncertainties described? | 3.3.4                                                    | Missing           | Description of specific survey methods employed; Discussion of difficulties encountered during surveys; Explanation of uncertainties related to survey data and methods                                                                                                | Include detailed descriptions of the survey methodologies used, document any challenges or difficulties encountered during the surveys, and explicitly discuss uncertainties or limitations in the survey data to fully address this checklist item.                                                                                              | Pending  |
| 3.3.5 Methods appropriate for the purpose?                       | 3.3.5; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing           | Description of specific methods used for environmental baseline studies; Justification of method appropriateness for the project context; Details on data sources and their relevance; Explanation of any limitations or uncertainties in methods used                 | Include a detailed description of the methods used to characterize the environment likely to be affected, explaining why these methods are appropriate for the project context. Provide information on data sources, timing, and any limitations or uncertainties associated with the methods.                                                    | Pending  |

| Requirement                                                               | Source                                                   | Finding           | Gap                                                                                                                                                                                                                                                                                                                       | Action                                                                                                                                                                                                                                                                                                                                                | Decision |
|---------------------------------------------------------------------------|----------------------------------------------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 3.3.6 Important data gaps identified and how they were handled explained? | 3.3.6                                                    | Missing           | Identification of important data gaps in the environmental baseline; Explanation of how identified data gaps were handled or mitigated; Discussion of limitations related to data gaps and their potential impact on assessment outcomes                                                                                  | Include a dedicated subsection or explicit statements within the environmental baseline sections that identify any important data gaps encountered during data collection and explain the methods or approaches used to address or mitigate these gaps. This should enhance transparency and improve the robustness of the environmental description. | Pending  |
| 4.1.1 Scoping process described?                                          | 4.1.1                                                    | Missing           | Description of the scoping process; Identification of key issues and boundaries for assessment; Stakeholder involvement in scoping; Methodology used to define scope; Documentation of scoping outcomes                                                                                                                   | Include a dedicated section describing the scoping process, detailing how the scope was established, who participated, key issues identified, and how the scope guided the assessment.                                                                                                                                                                | Pending  |
| 4.1.2 Systematic approach to scoping evident?                             | 4.1.2                                                    | Needs Improvement | Explicit description of the scoping process and methodology; Criteria or framework used to identify and prioritize significant effects; Documentation of stakeholder involvement in scoping; Clear linkage between scoping outcomes and assessment focus areas; Evidence of iterative review or refinement of scope       | Include a detailed description of the scoping process, including methods, criteria, and stakeholder engagement. Provide documentation or references to how scoping outcomes guided the assessment focus to demonstrate a systematic approach.                                                                                                         | Pending  |
| 4.1.3 Full consultation carried out during scoping?                       | 4.1.3; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing           | Description of consultation activities during scoping; List of stakeholders consulted; Records or summaries of consultation meetings or communications; Evidence of how consultation feedback influenced the scoping or assessment; Details on methods used to ensure full consultation (e.g., public notices, workshops) | Include a dedicated section detailing the consultation process carried out during scoping, including stakeholder identification, engagement methods, records of consultation, and how feedback was incorporated into the assessment.                                                                                                                  | Pending  |

| Requirement                                       | Source | Finding | Gap                                                                                                                                                                                                                                                                                            | Action                                                                                                                                                                                                                                                                                                               | Decision |
|---------------------------------------------------|--------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 4.1.4 Comments and views of consultees presented? | 4.1.4  | Missing | Presentation of comments and views from consultees; Summary or discussion of how consultee feedback was considered or incorporated; References to consultation records or stakeholder engagement outcomes                                                                                      | Include a dedicated subsection or content that clearly presents the comments and views of consultees, summarizing key points raised and how these have been addressed in the EIA. Provide references to consultation records and demonstrate responsiveness to stakeholder input.                                    | Pending  |
| 4.4.1 Secondary effects described?                | 4.4.1  | Missing | Description and analysis of secondary effects (indirect or induced impacts) of the project; Identification of pathways or mechanisms for secondary effects; Mitigation measures or management plans for secondary effects; Evidence or studies supporting secondary effects assessment         | Include a dedicated section or subsection explicitly describing secondary effects, their significance, and any mitigation or management measures. Provide supporting evidence such as specialist studies or consultation records addressing secondary effects.                                                       | Pending  |
| 4.4.2 Temporary/short-term effects described?     | 4.4.2  | Missing | Explicit description of temporary or short-term effects during construction or other phases; Assessment of the duration and nature of temporary impacts; Mitigation measures specific to temporary or short-term effects; Summary of residual temporary effects after mitigation               | Include a dedicated subsection or paragraphs explicitly describing temporary and short-term effects, their significance, mitigation measures, and residual impacts to fully address this checklist item.                                                                                                             | Pending  |
| 4.4.3 Permanent effects described?                | 4.4.3  | Missing | Description of permanent effects of the project; Summary of the nature and extent of permanent impacts; Mitigation measures for permanent effects; Evidence or data supporting assessment of permanent effects                                                                                 | Include a dedicated subsection or content explicitly describing the permanent effects of the project, summarizing their significance, mitigation, and residual impacts, supported by relevant evidence and data.                                                                                                     | Pending  |
| 4.4.4 Long-term effects described?                | 4.4.4  | Missing | Explicit description of long-term effects of the project; Assessment of the duration and persistence of impacts; Discussion of potential cumulative or residual long-term impacts; Mitigation measures specific to long-term effects; Evidence or data supporting long-term impact predictions | Include a dedicated section or subsection that explicitly describes the long-term effects of the project, supported by evidence and analysis. This should cover the duration, persistence, and significance of impacts beyond the construction and operational phases, including any cumulative or residual effects. | Pending  |

| Requirement                                                                         | Source | Finding | Gap                                                                                                                                                                                                                                                                                                                                                     | Action                                                                                                                                                                                                                                                                                                                   | Decision |
|-------------------------------------------------------------------------------------|--------|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 4.4.5 Ancillary activities effects described?                                       | 4.4.5  | Missing | Description of ancillary activities associated with the project; Assessment of likely significant effects from ancillary activities; Mitigation measures for ancillary activities impacts; Evidence such as drawings, studies, or consultation records related to ancillary activities                                                                  | Include a dedicated subsection describing ancillary activities and their potential environmental and social effects. Provide assessment of these effects, mitigation measures, and supporting evidence to fully address this checklist item.                                                                             | Pending  |
| 4.4.6 Indirect/consequential development effects described?                         | 4.4.6  | Missing | Identification and description of indirect or consequential development effects; Assessment of how these indirect effects may arise from the project; Mitigation measures or management plans for indirect effects; Evidence or studies supporting the assessment of indirect effects                                                                   | Include a dedicated section or subsection that identifies and describes indirect or consequential development effects associated with the project. Provide assessment methodology, evidence, and any proposed mitigation measures. Ensure this is integrated into the impact assessment and cumulative effects sections. | Pending  |
| 4.4.7 Cumulative effects with other developments described (including worst-case)?  | 4.4.7  | Missing | Identification and description of other developments in the area; Assessment of cumulative effects combining the project with other developments; Consideration of worst-case cumulative impact scenarios; Mitigation measures for cumulative effects; Supporting evidence such as studies, data, or consultation records related to cumulative impacts | Include a dedicated section analyzing cumulative effects with other developments, incorporating worst-case scenarios, supported by relevant data and consultation. Ensure this analysis is integrated into the impact assessment and mitigation planning.                                                                | Pending  |
| 4.4.8 Geographic extent, duration, frequency, reversibility, probability described? | 4.4.8  | Missing | Description of geographic extent of effects; Description of duration of effects; Description of frequency of effects; Description of reversibility of effects; Description of probability of effects                                                                                                                                                    | Include detailed descriptions and analyses of the geographic extent, duration, frequency, reversibility, and probability of the project's likely significant effects in the impact assessment sections to fully address this checklist item.                                                                             | Pending  |

| Requirement                                                                             | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                                                      | Action                                                                                                                                                                                                                                                                                                                                                              | Decision |
|-----------------------------------------------------------------------------------------|--------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 4.5.1 Primary and secondary effects on human health and welfare described/quantified?   | 4.5.1  | Needs Improvement | Specific description of primary effects on human health and welfare; Quantification or estimation of these effects; Description and quantification of secondary effects on human health and welfare; Details on how impacts on nearby communities translate into health and welfare outcomes; Evidence from specialist studies or health risk assessments supporting the analysis        | Include a dedicated section that explicitly describes and quantifies the primary and secondary effects on human health and welfare, supported by specialist studies or health risk assessments. Provide clear summaries of potential health impacts during construction, operation, and decommissioning phases, and explain mitigation measures and residual risks. | Pending  |
| 4.5.2 Impacts on biodiversity, climate change, and sustainable development discussed?   | 4.5.2  | Needs Improvement | Explicit assessment of impacts on biodiversity; Detailed discussion of climate change impacts and mitigation; Consideration of sustainable development principles and impacts; Project-specific data and analysis related to these topics; Mitigation measures and residual effects for biodiversity and climate change                                                                  | Include detailed, project-specific assessments of impacts on biodiversity, climate change, and sustainable development. Provide mitigation measures and discuss residual effects. Integrate sustainable development considerations explicitly.                                                                                                                      | Pending  |
| 4.6.1 Significance discussed in terms of legal compliance and sensitivity of receptors? | 4.6.1  | Missing           | Discussion of legal compliance related to environmental standards and regulations; Identification and characterization of sensitive receptors; Assessment of impact significance based on receptor sensitivity; Explanation of how legal thresholds influence significance determination; Integration of legal and receptor sensitivity considerations in impact significance evaluation | Include a dedicated subsection that explicitly discusses impact significance in terms of applicable legal requirements and the sensitivity of environmental and social receptors. Provide evidence of legal standards considered and receptor sensitivity assessments to support significance conclusions.                                                          | Pending  |

| Requirement                                                    | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                  | Action                                                                                                                                                                                                                                                                                                                                                                      | Decision |
|----------------------------------------------------------------|--------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 4.6.2 Appropriate standards and guidance used?                 | 4.6.2  | Missing           | Identification and citation of relevant environmental standards and guidelines used in the assessment methodology; Explanation of how these standards and guidance informed the assessment process; Reference to regulatory or industry best practices applied; Demonstration of compliance with applicable authority requirements through standards | Include explicit references to the environmental standards, guidelines, and regulatory frameworks used to guide the assessment methodology and impact evaluations. Provide explanations of how these standards were applied to ensure the assessment's appropriateness and credibility.                                                                                     | Pending  |
| 4.6.3 Positive effects described as well as negative?          | 4.6.3  | Needs Improvement | Explicit description of positive effects or benefits of the project; Balanced discussion of both positive and negative effects; Summary of positive residual effects after mitigation                                                                                                                                                                | Include a clear and explicit section or statements describing the positive effects and benefits of the project alongside the negative effects and mitigation measures to provide a balanced impact assessment.                                                                                                                                                              | Pending  |
| 4.6.4 Significance of each effect clearly explained?           | 4.6.4  | Needs Improvement | Clear explanation of the significance of each identified effect; Criteria or thresholds used to determine significance; Summary of significance for each effect individually; Discussion of magnitude, duration, and likelihood of effects; Clear statements on which effects are significant and which are not                                      | Include a dedicated section or subsection that clearly explains the significance of each identified effect using defined criteria. Provide summaries that are accessible to non-technical readers, explicitly stating which effects are significant and why. Ensure that the assessment covers magnitude, duration, and likelihood to support the significance conclusions. | Pending  |
| 4.7.1 Methods used to predict effects described and justified? | 4.7.1  | Needs Improvement | Explicit description of methods used to predict effects; Justification for the choice of prediction methods; Details on modeling or analytical techniques applied; Explanation of assumptions and limitations of methods; References to guidelines or standards followed                                                                             | Include a dedicated subsection detailing the specific methods used for effect prediction, with clear justification for their selection, description of procedures, assumptions, and limitations. Reference relevant standards or guidelines to support methodological choices.                                                                                              | Pending  |

| Requirement                                          | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                                    | Action                                                                                                                                                                                                                                                                                                                            | Decision |
|------------------------------------------------------|--------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 4.7.2 Worst-case predictions used where uncertain?   | 4.7.2  | Missing           | Explanation or demonstration of using worst-case predictions in the assessment where uncertainty exists; Description of methods or models that incorporate worst-case scenarios; Evidence of conservative assumptions or safety margins in impact predictions; Discussion on uncertainty analysis and how it informs worst-case scenario selection                     | Include a clear statement and explanation on the use of worst-case predictions in the impact assessment methodology, especially where uncertainty is present. Provide examples or references to models or assumptions that reflect worst-case scenarios to ensure conservative and precautionary evaluation of potential effects. | Pending  |
| 4.7.3 Difficulties in data compilation acknowledged? | 4.7.3  | Missing           | Explicit acknowledgment of difficulties or limitations in data compilation; Discussion of data gaps or uncertainties encountered; Explanation of how data limitations were addressed or mitigated                                                                                                                                                                      | Include a dedicated subsection or statements within the impact assessment sections that explicitly acknowledge any difficulties or limitations encountered during data compilation. This should cover data gaps, uncertainties, and how these were managed to ensure transparency and credibility of the assessment.              | Pending  |
| 4.7.4 Level of treatment appropriate to importance?  | 4.7.4  | Needs Improvement | Explicit explanation of how the level of treatment is determined based on the importance of effects; Justification or rationale for the chosen assessment scope and depth; Criteria or thresholds used to decide assessment rigor; Examples or evidence of tailoring assessment effort to significant effects; Discussion of proportionality in assessment methodology | Include a dedicated subsection that explicitly explains the methodology for determining the level of treatment appropriate to the importance of effects. Provide criteria, rationale, and examples demonstrating proportionality and focus on significant issues.                                                                 | Pending  |
| 4.7.5 Emphasis given to most severe effects?         | 4.7.5  | Needs Improvement | Explicit identification and emphasis on the most severe effects; Clear prioritization or ranking of effects by severity; Summary sections that highlight the most critical impacts distinctly from others; Explanation of how emphasis on severe effects informs decision-making or mitigation planning                                                                | Include a clear section or summary that explicitly identifies and emphasizes the most severe environmental effects of the project. Provide prioritization or ranking of impacts by their significance to guide mitigation and decision-making processes.                                                                          | Pending  |

| Requirement                                                                                   | Source | Finding | Gap                                                                                                                                                                                                                                                                                                      | Action                                                                                                                                                                                                                                                                               | Decision |
|-----------------------------------------------------------------------------------------------|--------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5.1 Significant adverse effects and potential for mitigation discussed?                       | 5.1    | Missing | Identification of significant adverse environmental and social effects; Discussion of potential mitigation measures for these effects; Linkage of mitigation measures to specific adverse effects; Evidence or examples of mitigation commitments or hierarchy applied to significant effects            | Include a dedicated subsection that explicitly identifies significant adverse effects anticipated from the project and discusses corresponding mitigation measures. Provide evidence linking mitigation commitments to these effects, supported by project-specific data or studies. | Pending  |
| 5.2 Effect of mitigation on magnitude and significance explained?                             | 5.2    | Missing | Explanation of how mitigation measures reduce impact magnitude; Assessment of changes in impact significance due to mitigation; Quantitative or qualitative evidence showing mitigation effectiveness; Clear linkage between identified impacts and mitigation outcomes                                  | Include a dedicated subsection that explicitly explains the effect of each mitigation measure on the magnitude and significance of environmental impacts, supported by evidence or assessment results.                                                                               | Pending  |
| 5.3 Reasons for choosing proposed mitigation explained?                                       | 5.3    | Missing | Explanation of reasons for choosing each proposed mitigation measure; Justification linking mitigation measures to identified impacts or regulatory requirements; Assessment of alternatives or mitigation options considered; Rationale demonstrating effectiveness or suitability of chosen mitigation | Include a dedicated subsection or narrative that clearly explains the rationale behind selecting each proposed mitigation measure, referencing impact assessments, regulatory requirements, and alternatives considered to fully address this checklist item.                        | Pending  |
| 5.4 Full range of mitigation approaches considered (avoid, reduce, remedy, compensate, etc.)? | 5.4    | Missing | Explicit consideration and evaluation of all mitigation approaches: avoidance, reduction, remedy, compensation; Examples or descriptions of how each mitigation approach is applied or considered; Linkage of mitigation approaches to specific impacts or project phases                                | Include a dedicated subsection or detailed content explicitly describing the full range of mitigation approaches considered, with examples and rationale for their selection or rejection, to fully address this checklist item.                                                     | Pending  |

| Requirement                                                                      | Source                                                 | Finding             | Gap                                                                                                                                                                                                                                                                                                                    | Action                                                                                                                                                                                                                                                                                                           | Decision |
|----------------------------------------------------------------------------------|--------------------------------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 5.5 Arrangements to monitor and manage residual impacts proposed?                | 5.5                                                    | Needs Improvement   | Specific arrangements or plans to monitor residual impacts; Details on management measures for residual impacts; Monitoring indicators and thresholds related to residual impacts; Reporting and response mechanisms for residual impacts; Assignment of responsibilities and resources for residual impact management | Include explicit, project-specific arrangements for monitoring and managing residual impacts, detailing indicators, thresholds, reporting protocols, and responsible parties to fully address this checklist item.                                                                                               | Pending  |
| 5.6 Any negative effects of the proposed mitigation described?                   | 5.6                                                    | Missing             | Description or identification of any negative effects or unintended consequences of the proposed mitigation measures; Assessment or discussion of the significance of such negative effects; Measures to manage or minimize any negative effects of mitigation                                                         | Include a dedicated subsection or content within the mitigation description that explicitly identifies and evaluates any negative effects of the proposed mitigation measures. This should cover potential residual impacts, trade-offs, or unintended consequences, supported by evidence or expert assessment. | Pending  |
| 6.1 Does the EIA include a Non-Technical Summary?                                | 6.1; ShipStation_V2_Inventory_API_Support_Summary.docx | Partially Compliant | Final project-specific Non-Technical Summary with confirmed design basis and data; Approved layout drawings and access routes specific to the project; Quantified material, water, energy, waste, emission, and traffic estimates by phase with verified values                                                        | Include a finalized, project-specific Non-Technical Summary with confirmed design details, approved drawings, and quantified environmental data to fully address this checklist item.                                                                                                                            | Pending  |
| 6.2 Is it concise but comprehensive (project, environment, effects, mitigation)? | 6.2                                                    | Partially Compliant | Project-specific values and data; Quantified environmental and social effects; Detailed mitigation measures; Clear summary of decision readiness and residual impacts                                                                                                                                                  | Incorporate project-specific data and quantified impacts to enhance comprehensiveness. Include detailed mitigation measures and a clear summary of decision readiness to fully address the checklist item.                                                                                                       | Pending  |
| 6.3 Does it explain the development consent process and role of EIA?             | 6.3                                                    | Missing             | Explanation of the development consent process; Description of the role and importance of the EIA in the consent process; Information on how the EIA influences decision-making and approvals                                                                                                                          | Include a clear, concise explanation of the development consent process and explicitly describe the role of the EIA in that process within the non-technical summary section to meet the checklist requirement.                                                                                                  | Pending  |

| Requirement                                                                                               | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                                                                     | Action                                                                                                                                                                                                                                                                                                                                   | Decision |
|-----------------------------------------------------------------------------------------------------------|--------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 6.4 Does it provide an overview of the assessment approach?                                               | 6.4    | Needs Improvement | Explicit description of the assessment approach; Methodologies used for impact assessment; Assessment criteria and process overview                                                                                                                                                                                                                                                                     | Include a clear and concise overview of the assessment approach in the non-technical summary, detailing the methodologies, criteria, and process steps used to evaluate environmental and social impacts.                                                                                                                                | Pending  |
| 6.5 Is it written in non-technical language?                                                              | 6.5    | Needs Improvement | Explicit confirmation that the summary is written in non-technical, accessible language; Examples or evidence of simplified language avoiding technical jargon; Statements or feedback confirming readability by non-expert audiences                                                                                                                                                                   | Include explicit statements confirming the use of non-technical language in the summary and provide examples or readability assessments to demonstrate accessibility to non-expert readers.                                                                                                                                              | Pending  |
| 7.1 Relevant Kuwait regulations (KEPA, Ministry of Oil, etc.) provided?                                   | 7.1    | Missing           | Identification and listing of relevant Kuwait regulations (e.g., KEPA, Ministry of Oil); Specific references to applicable Kuwait laws, regulations, or standards; Evidence of permits or approvals from Kuwait authorities; Demonstration of compliance obligations specific to Kuwait                                                                                                                 | Include a detailed list and discussion of relevant Kuwait regulations, including those from KEPA and the Ministry of Oil, with references to specific laws, permits, and compliance obligations applicable to the project. Provide evidence of consultation with these authorities and incorporation of their requirements into the EIA. | Pending  |
| 7.2 Applicable environmental standards discussed (Noise, Air, Effluent, Waste, Soil, Biodiversity, etc.)? | 7.2    | Needs Improvement | Explicit listing and discussion of applicable environmental standards for noise, air, effluent, waste, soil, biodiversity, etc.; Reference to national or international standards or guidelines relevant to these environmental parameters.; Details on how these standards are integrated into project design or compliance monitoring.; Evidence of permits or approvals referencing these standards. | Include a dedicated subsection that explicitly lists and discusses the applicable environmental standards relevant to the project, referencing national and international regulations and guidelines. Provide evidence of how these standards are incorporated into project design and compliance obligations.                           | Pending  |
| 7.3 KOC HSE MS Policy, Vision & Mission clearly described?                                                | 7.3    | Missing           | Description of KOC HSE MS Policy; Description of KOC HSE MS Vision; Description of KOC HSE MS Mission; Evidence or references supporting the policy, vision, and mission statements                                                                                                                                                                                                                     | Include a dedicated subsection clearly describing the KOC HSE MS Policy, Vision, and Mission with supporting evidence or references to official documents to fully address this checklist item.                                                                                                                                          | Pending  |

| Requirement                                               | Source | Finding             | Gap                                                                                                                                                                                                                                                                                                                                                     | Action                                                                                                                                                                                                                                                                                            | Decision |
|-----------------------------------------------------------|--------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 7.4 Applicable features of KOC EIA Procedure implemented? | 7.4    | Missing             | Specific identification of KOC EIA Procedure requirements relevant to the project; Demonstration or description of how KOC EIA Procedure features have been implemented; Evidence such as permits, approvals, or compliance documents referencing KOC EIA Procedure; Cross-references to KOC EIA Procedure within the EIA report sections               | Include a dedicated section or detailed explanation demonstrating how the applicable features of the KOC EIA Procedure have been identified and implemented in the project EIA. Provide supporting evidence such as permits, approvals, or compliance documentation referencing KOC requirements. | Pending  |
| 7.5 Relevant HSE MS Procedures utilized or referenced?    | 7.5    | Missing             | Identification and description of relevant HSE MS procedures utilized or referenced in the project; References or citations to specific HSE MS documents or standards; Explanation of how HSE MS procedures are integrated into project planning and execution; Evidence such as procedural documents, manuals, or compliance records related to HSE MS | Include a dedicated subsection or content that explicitly identifies and references the relevant HSE MS procedures applied to the project. Provide evidence of their utilization and integration into project management and compliance processes.                                                | Pending  |
| 8.1 Information available in clearly defined document(s)? | 8.1    | Partially Compliant | Explicit confirmation that all required information is compiled into clearly defined, well-structured documents; Direct statements or examples demonstrating clarity and organization of the EIA documents; Project-specific finalized documents or summaries showing clear presentation of information                                                 | Include explicit statements or examples confirming that the EIA information is compiled into clearly defined and well-structured documents. Provide finalized document excerpts or summaries demonstrating clarity and organization to fully address this checklist item.                         | Pending  |
| 8.2 Logically organized and clearly structured?           | 8.2    | Partially Compliant | Explicit statement or evidence of logical organization and clear structure beyond section headings; Project-specific content to verify logical flow and clarity; Table of contents or navigation aids; Cross-references or summaries to guide the reader; Complete draft to assess full document structure                                              | Complete the draft with project-specific data and verify logical flow throughout. Include navigation aids such as a table of contents and cross-references to improve clarity. Provide explicit statements on document organization and structure in the presentation quality section.            | Pending  |

| Requirement                                                                       | Source                                                    | Finding             | Gap                                                                                                                                                                                                                                                                                                                    | Action                                                                                                                                                                                                                                                                      | Decision |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1.6.10 Methods for collecting, treating, and discharging air emissions described? | 1.6.10; ShipStation_V2_Inventory_API_Support_Summary.docx | Missing             | Description of methods for collecting air emissions; Description of treatment technologies or processes for air emissions; Description of discharge methods or controls for air emissions; Supporting data or references for air emissions management                                                                  | Include a detailed section describing the methods for collecting, treating, and discharging air emissions associated with the project. Provide technical details, technologies used, and any relevant permits or standards to demonstrate compliance and impact mitigation. | Pending  |
| 8.3 Table of contents present?                                                    | 8.3                                                       | Missing             | Explicit inclusion or reference to a table of contents in the EIA document; Evidence or statement confirming the presence of a table of contents                                                                                                                                                                       | Include a clear and complete table of contents in the EIA document and reference it in the submission to demonstrate compliance with checklist item 8.3.                                                                                                                    | Pending  |
| 8.4 Clear description of process followed?                                        | 8.4                                                       | Missing             | Clear step-by-step description of the process followed in the assessment; Explanation of methodologies used; Details on data collection and analysis procedures; Information on stakeholder engagement process; Timeline or sequence of assessment activities                                                          | Include a dedicated subsection clearly outlining the process followed in the EIA, detailing methodologies, data collection, analysis, and stakeholder engagement to improve clarity and transparency.                                                                       | Pending  |
| 8.5 Comprehensive but concise?                                                    | 8.5                                                       | Partially Compliant | Explicit confirmation or demonstration that the presentation is concise and avoids unnecessary detail; Clear guidance or examples on how to balance comprehensiveness with conciseness in the EIA presentation; Project-specific values and data to verify the adequacy of content length and detail                   | Include explicit statements or examples demonstrating how the EIA presentation maintains conciseness while being comprehensive. Verify project-specific data to ensure the final document is not overly detailed or verbose.                                                | Pending  |
| 8.6 Effective use of tables, figures, maps, photos?                               | 8.6                                                       | Missing             | Examples or references to tables used to summarize data; Inclusion of figures or charts illustrating key information; Maps showing project location, footprint, or sensitive receptors; Photographs supporting baseline or impact descriptions; Discussion or evaluation of the effectiveness of these visual elements | Include and clearly reference tables, figures, maps, and photos throughout the EIA to enhance clarity and support the textual information. Provide examples and explanations of how these visuals aid understanding and decision-making.                                    | Pending  |

| Requirement                                                  | Source | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                  | Action                                                                                                                                                                                                                                                                                                                                                                               | Decision |
|--------------------------------------------------------------|--------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 8.7 Effective use of annexes/appendices?                     | 8.7    | Missing           | Reference to annexes or appendices in the EIA report;<br>Demonstration of how annexes/appendices support the main text;<br>Examples or descriptions of annexes/appendices contents; Explanation of the organization and accessibility of annexes/appendices                                                                                          | Include a dedicated section or references within the EIA report that clearly identify annexes or appendices. Ensure these supplementary materials are well-organized, relevant, and effectively support the main report content to enhance clarity and completeness.                                                                                                                 | Pending  |
| 8.8 All analyses and conclusions supported by evidence?      | 8.8    | Needs Improvement | Explicit citations or references linking analyses and conclusions to specific evidence; Examples of data or study results supporting key conclusions; Clear demonstration that all claims are backed by documented evidence; Verification that final quantities and thresholds are confirmed against approved design data and authority requirements | Include explicit references and citations within the EIA text that link each analysis and conclusion to the supporting evidence such as survey data, specialist studies, and permits. Provide examples or summaries of key data underpinning conclusions to strengthen the evidential basis. Ensure final design data and authority approvals are clearly documented and referenced. | Pending  |
| 8.9 Consistent terminology used?                             | 8.9    | Missing           | Statement or policy on consistent terminology use; Glossary of terms or definitions; Examples of consistent terminology application across sections; Quality control or review process for terminology consistency                                                                                                                                   | Include a dedicated section or statement confirming the use of consistent terminology throughout the EIA document, supported by a glossary of terms and evidence of quality control measures to ensure consistency.                                                                                                                                                                  | Pending  |
| 8.10 Reads as a single document with good cross-referencing? | 8.10   | Needs Improvement | Explicit cross-referencing between sections; Navigation aids such as a table of contents or internal links; Narrative or textual cues linking sections to each other; Evidence that the document reads as a single cohesive document rather than separate parts                                                                                      | Include explicit cross-references between sections, such as references to related sections or figures, and ensure the document reads as a cohesive whole. Adding a table of contents and internal links would improve navigation and presentation quality.                                                                                                                           | Pending  |

| Requirement                                                                                                               | Source             | Finding           | Gap                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Action                                                                                                                                                                                                                                                                                                                        | Decision |
|---------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 8.11 Presentation fair, impartial, and objective?                                                                         | 8.11               | Needs Improvement | Explicit statement or evidence that the presentation is fair, impartial, and objective; Description of measures taken to ensure impartiality and objectivity in the EIA presentation; Any review or quality assurance process confirming fairness and objectivity; Discussion of potential biases and how they are mitigated in the presentation                                                                                                                                                                                                                                    | Include explicit statements and evidence demonstrating that the EIA presentation is fair, impartial, and objective. Add descriptions of quality assurance or review processes that ensure impartiality. Address potential biases and how they are mitigated in the presentation.                                              | Pending  |
| REG-KW-001-ART-100 Kuwait Environmental Protection Law No. 42 of 2014: Protect threatened terrestrial and marine wildlife | REG-KW-001-ART-100 | Needs Improvement | Identification of threatened terrestrial and marine wildlife potentially affected by the project; Assessment of project activities that could hunt, kill, capture, collect, harm, possess or transport threatened wildlife; Evaluation of disturbance to young, eggs, nests or body parts of threatened species; Evidence of KEPA authorisations and controls for any proposed collection or handling of wildlife; Specific mitigation measures to protect threatened wildlife during all project phases; Baseline survey data and specialist studies focused on threatened species | Include detailed baseline surveys and impact assessments specifically addressing threatened terrestrial and marine wildlife. Document any KEPA permits or authorisations related to wildlife protection. Clearly describe mitigation measures to avoid harm or disturbance to these species throughout the project lifecycle. | Pending  |
| REG-KW-002-ART-101 Kuwait Environmental Protection Law No. 42 of 2014: Prevent trade in threatened wildlife               | REG-KW-002-ART-101 | Missing           | Identification of threatened wildlife species potentially affected by the project; Assessment of risks related to trade in threatened wildlife through procurement or workforce activities; Mitigation measures to prevent trade or handling of threatened wildlife specimens; Contractor and workforce training or compliance requirements regarding wildlife protection; Monitoring and enforcement mechanisms to ensure no trade in threatened wildlife occurs                                                                                                                   | Include a dedicated section assessing the risk of trade in threatened wildlife related to the project, detailing mitigation measures, compliance protocols, and monitoring plans to demonstrate adherence to Kuwait Environmental Protection Law No. 42 of 2014.                                                              | Pending  |

| Requirement                                                                                                                                                                                 | Source                   | Finding | Gap                                                                                                                                                                                                                                                                                                                                                                                                                                             | Action                                                                                                                                                                                                                                                                                                                            | Decision |
