Executive Summary

TIERS Limited is a proposed development project located at MIOSUMER BOULAVARD, Pakistan, within the ABC sector. The project encompasses construction, commissioning, operation, and eventual closure phases. Its primary objective is to establish the facility while managing and mitigating environmental and social impacts related to land use, resource consumption, emissions, waste generation, traffic, and community well-being throughout its lifecycle.

Assessment Scope and ApproachThe Environmental Impact Assessment (EIA) covers the full project lifecycle phases—construction, operation, and decommissioning—addressing potential interactions with environmental and social receptors. The scope includes evaluation of alternatives (no-project, site, design, technology, and process), baseline environmental and social conditions, impact identification and significance, mitigation measures, monitoring programs, cumulative effects, climate considerations, stakeholder engagement, and compliance obligations. The assessment methodology involves linking project activities to receptors, applying significance criteria considering magnitude, sensitivity, extent, duration, frequency, reversibility, likelihood, and confidence, and distinguishing pre-mitigation and residual effects.

Baseline ConditionsThe baseline study area includes the project footprint at MIOSUMER BOULAVARD, associated facilities, transport routes, and the wider zone potentially affected by indirect or cumulative impacts. Baseline data describe current land use, soils, water, air quality, noise levels, biodiversity, cultural heritage, material assets, and socio-economic conditions, including seasonal variations and identification of vulnerable receptors. Data sources comprise field surveys, laboratory analyses, specialist studies, and stakeholder consultations. However, specific quantitative baseline data, coordinates, and thresholds require confirmation against approved design data and authority requirements. Identified data gaps and survey limitations are acknowledged but not detailed in the provided material.

Key Environmental and Social Effects- Land disturbance and habitat alteration during construction

- Increased construction traffic impacting local transport and communities
- Resource consumption including water and energy use
- Emissions to air and potential noise pollution during construction and operation
- Waste generation and management challenges
- Impacts on biodiversity and ecosystem services
- Effects on social, health, cultural heritage, and land use aspects in the vicinity
- Potential risks from accidents and unplanned events during all project phases
- Cumulative impacts in combination with other developments
- Greenhouse gas emissions and climate resilience considerations

AlternativesThe assessment includes a comparative analysis of the no-project scenario and feasible alternatives concerning site location, layout, technology, construction methods, and operational processes. Each alternative is

evaluated consistently against criteria such as land take, proximity to sensitive receptors, resource efficiency, pollution potential, climate resilience, community effects, constructability, and cost. The preferred alternative is selected based on its superior ability to avoid or minimize adverse impacts prior to applying mitigation measures. Documentation of rejected options, decision-makers, consultation inputs, and dates of decisions are noted as necessary but specific details are not provided in the source material.

Mitigation and Monitoring Mitigation follows a hierarchical approach prioritizing avoidance, minimization, restoration, and where necessary, compensation for significant residual effects. Commitments are to be specific, measurable, and linked to responsible owners, implementation phases, completion dates, performance indicators, and corrective action triggers. Environmental and Social Management Plans (ESMPs) are to be developed, incorporating pollution control, habitat protection, community engagement, and grievance mechanisms. Monitoring programs are designed with defined indicators, methods, locations, thresholds, frequency, reporting protocols, and response actions to ensure compliance and adaptive management. However, detailed mitigation measures, monitoring parameters, and responsible parties are not explicitly detailed in the provided text and require confirmation against final project design and regulatory requirements.

Conclusion and Limitations The EIA concludes that TIERS Limited has identifiable potential environmental and social impacts primarily related to land disturbance, emissions, resource use, waste, biodiversity, and community effects. With the implementation of the preferred design, management measures, and mitigation hierarchy, residual impacts are expected to be controlled and minimized. The assessment emphasizes the necessity for final verification of design details, quantities, coordinates, and thresholds against approved data and applicable authority requirements. Limitations include unresolved regulatory applicability due to references to non-local standards (e.g., Kuwait KEPA and KOC), absence of specific quantitative data, and acknowledged data gaps and uncertainties. The report underscores the importance of completing technical, legal, and editorial quality assurance prior to final issuance and decision-making, ensuring traceability of evidence and transparency in addressing uncertainties.

1 EXECUTIVE SUMMARY

Structured EIA chapter

1.1 Non-Technical Executive Summary

Assessment responseDemonstration scope: This illustrative response addresses whether non-technical executive summary. It shows the expected structure and level of explanation; project-specific values require verification.

TIERS Limited is presented as a proposed development at Pakistan / MIOSUMER BOULAVARD. This demonstration assessment describes the construction, commissioning, operation and eventual closure activities that could interact with environmental and social receptors. The project need is to deliver the proposed facility while controlling land, resource, emissions, waste, traffic and community impacts through its full life cycle.

Information to include in the controlled issue- Confirm the final design basis, footprint, schedule and workforce profile.

- Insert approved layout drawings, access routes, utilities and temporary work areas.
- Quantify material, water, energy, waste, emission and traffic estimates by phase.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 1 — EXECUTIVE SUMMARY.

1.2 Key Impacts, Mitigation and Decision Readiness

Assessment responseDemonstration scope: This illustrative response addresses whether key impacts, mitigation and decision readiness. It shows the expected structure and level of explanation; project-specific values require verification.

TIERS Limited is presented as a proposed development at Pakistan / MIOSUMER BOULAVARD. This demonstration assessment describes the construction, commissioning, operation and eventual closure activities that could interact with environmental and social receptors. The project need is to deliver the proposed facility while controlling land, resource, emissions, waste, traffic and community impacts through its full life cycle.

Information to include in the controlled issue- Confirm the final design basis, footprint, schedule and workforce profile.

- Insert approved layout drawings, access routes, utilities and temporary work areas.
- Quantify material, water, energy, waste, emission and traffic estimates by phase.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 1 — EXECUTIVE SUMMARY.

2 PROJECT DESCRIPTION

Structured EIA chapter

2.1 Project Need, Objectives and Location

Assessment responseDemonstration scope: This illustrative response addresses whether project need, objectives and location. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be

the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

2.2 Project Components, Layout and Design

Assessment responseDemonstration scope: This illustrative response addresses whether project components, layout and design. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

2.3 Construction, Operation and Decommissioning

Assessment responseDemonstration scope: This illustrative response addresses whether construction, operation and decommissioning. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

2.4 Inputs, Outputs, Emissions, Waste and Resources

Assessment responseDemonstration scope: This illustrative response addresses whether inputs, outputs, emissions, waste and resources. It shows the expected structure and level of explanation; project-specific values

require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsWaste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

2.5 Programme, Workforce and Associated Facilities

Assessment responseDemonstration scope: This illustrative response addresses whether programme, workforce and associated facilities. It shows the expected structure and level of explanation; project-specific values require verification.

The alternatives assessment compares the no-project option with feasible site, layout, technology, construction and operating options. Each option should be assessed consistently for land take, sensitive receptors, resource efficiency, pollution, climate resilience, community effects, constructability and cost. The preferred option should be the one that best avoids impacts before relying on mitigation.

Information to include in the controlled issue- Add an alternatives matrix with consistent environmental and social criteria.

- Document the no-project scenario and reasons rejected options were not carried forward.
- Record the decision-makers, consultation inputs and date of the preferred-option decision.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 2 — PROJECT DESCRIPTION.

3 POLICY, LEGAL AND REGULATORY FRAMEWORK

Structured EIA chapter

3.1 Applicable National and Local Requirements

Assessment responseDemonstration scope: This illustrative response addresses whether applicable national and local requirements. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at Pakistan / MIOSUMER BOULAVARD, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation

records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

3.2 International Standards and Project Commitments

Assessment response
Demonstration scope: This illustrative response addresses whether international standards and project commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at Pakistan / MIOSUMER BOULAVARD, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

Evidence and limitations
Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

3.3 Permits, Approvals and Compliance Obligations

Assessment response
Demonstration scope: This illustrative response addresses whether permits, approvals and compliance obligations. It shows the expected structure and level of explanation; project-specific values require verification.

The baseline study area must cover the project footprint at Pakistan / MIOSUMER BOULAVARD, associated facilities, transport routes and the wider zone in which indirect or cumulative effects could occur. Baseline information should describe current land use, soils, water, air, noise, biodiversity, cultural heritage, material assets and socio-economic conditions, including seasonal variation and vulnerable receptors.

Information to include in the controlled issue- Add dated survey results, coordinates, maps and laboratory accreditation details.

- Identify sensitive receptors and explain the spatial and temporal study boundaries.
- List data gaps, survey limitations and the assumptions used to address them.

Evidence and limitations
Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 3 — POLICY, LEGAL AND REGULATORY FRAMEWORK.

4 ALTERNATIVES ASSESSMENT

Structured EIA chapter

4.1 No-Project Alternative

Assessment response
Demonstration scope: This illustrative response addresses whether no-project alternative. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and

confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

4.2 Site, Design, Technology and Process Alternatives

Assessment responseDemonstration scope: This illustrative response addresses whether site, design, technology and process alternatives. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

4.3 Comparison and Selection of the Preferred Alternative

Assessment responseDemonstration scope: This illustrative response addresses whether comparison and selection of the preferred alternative. It shows the expected structure and level of explanation; project-specific values require verification.

Potential effects are assessed by linking each project activity to an environmental or social receptor. Significance should consider magnitude, receptor sensitivity, geographic extent, duration, frequency, reversibility, likelihood and confidence. The assessment should cover direct, indirect, induced, cumulative, temporary, permanent, positive and adverse effects, with credible worst-case assumptions where uncertainty remains.

Information to include in the controlled issue- Add an impact register connecting activities, pathways, receptors and significance ratings.

- State the prediction method, assessment criteria and evidence for each material effect.
- Separate pre-mitigation effects from residual effects after committed measures.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 4 — ALTERNATIVES ASSESSMENT.

5 ENVIRONMENTAL AND SOCIAL BASELINE

5.1 Study Area, Methods, Sources and Limitations

Assessment responseDemonstration scope: This illustrative response addresses whether study area, methods, sources and limitations. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

Information to include in the controlled issue- Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

5.2 Physical Environment

Assessment responseDemonstration scope: This illustrative response addresses whether physical environment. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

Information to include in the controlled issue- Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

5.3 Biodiversity and Ecosystem Services

Assessment responseDemonstration scope: This illustrative response addresses whether biodiversity and ecosystem services. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

Information to include in the controlled issue- Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

Evidence and limitationsSeasonally appropriate ecological surveys, habitat maps, species records and conservation-status sources. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

5.4 Social, Health, Cultural Heritage and Land Use

Assessment responseDemonstration scope: This illustrative response addresses whether social, health, cultural heritage and land use. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

Information to include in the controlled issue- Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

Evidence and limitationsCensus and livelihood data, stakeholder records, workforce estimates and grievance-management records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

5.5 Sensitive Receptors and Future Baseline

Assessment responseDemonstration scope: This illustrative response addresses whether sensitive receptors and future baseline. It shows the expected structure and level of explanation; project-specific values require verification.

Mitigation should follow the hierarchy of avoidance, minimization, restoration and, where appropriate, compensation for significant residual effects. Each commitment should be specific, measurable and linked to an owner, implementation phase, completion date, performance indicator and corrective-action trigger.

Information to include in the controlled issue- Add a commitments register with accountable owners and implementation dates.

- Define monitoring locations, methods, frequency, thresholds and escalation actions.
- Explain residual effects and any impacts introduced by the mitigation itself.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 5 — ENVIRONMENTAL AND SOCIAL BASELINE.

6 IMPACT ASSESSMENT

Structured EIA chapter

6.1 Scoping and Assessment Methodology

Assessment responseDemonstration scope: This illustrative response addresses whether scoping and assessment methodology. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at Pakistan / MIOSUMER BOULAVARD. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

6.2 Construction Impacts

Assessment responseDemonstration scope: This illustrative response addresses whether construction impacts. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at Pakistan / MIOSUMER BOULAVARD. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

6.3 Operational Impacts

Assessment responseDemonstration scope: This illustrative response addresses whether operational impacts. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at Pakistan / MIOSUMER BOULAVARD. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

6.4 Decommissioning, Accidents and Unplanned Events

Assessment responseDemonstration scope: This illustrative response addresses whether decommissioning, accidents and unplanned events. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at Pakistan / MIOSUMER BOULAVARD. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsWaste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

6.5 Impact Significance and Residual Effects

Assessment responseDemonstration scope: This illustrative response addresses whether impact significance and residual effects. It shows the expected structure and level of explanation; project-specific values require verification.

In plain language, TIERS Limited is a proposed development at Pakistan / MIOSUMER BOULAVARD. Its principal potential effects relate to land disturbance, construction traffic, resource use, emissions, waste, biodiversity and nearby communities. The preferred design and management measures should avoid sensitive areas, control pollution, monitor performance and provide a route for concerns to be raised and resolved.

Information to include in the controlled issue- Add a simple location figure and project layout.

- Summarize the most important effects, mitigation and residual effects without technical jargon.
- Explain the approval process and how readers can access the full assessment and submit comments.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 6 — IMPACT ASSESSMENT.

7 MITIGATION AND ENVIRONMENTAL MANAGEMENT

Structured EIA chapter

7.1 Mitigation Hierarchy and Commitments

Assessment responseDemonstration scope: This illustrative response addresses whether mitigation hierarchy and commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The project record identifies Pakistan as the country. The imported checklist refers to Kuwait, KEPA and KOC requirements, which may not match the project jurisdiction. This demonstration therefore does not assert those requirements apply. Before issue, the legal register must be confirmed by a qualified local practitioner and aligned with permit conditions, applicable national law, international commitments and client standards.

Information to include in the controlled issue- Confirm the competent authority and governing EIA legislation for the actual project location.

- Replace inapplicable Kuwait/KOC references or document why they apply contractually.
- Add a legal register with requirement, source, version, applicability, evidence and responsible owner.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Regulatory applicability is unresolved and must be verified before this report is issued or relied upon.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

7.2 Environmental and Social Management Plan

Assessment responseDemonstration scope: This illustrative response addresses whether environmental and social management plan. It shows the expected structure and level of explanation; project-specific values require verification.

The project record identifies Pakistan as the country. The imported checklist refers to Kuwait, KEPA and KOC requirements, which may not match the project jurisdiction. This demonstration therefore does not assert those requirements apply. Before issue, the legal register must be confirmed by a qualified local practitioner and aligned

with permit conditions, applicable national law, international commitments and client standards.

Information to include in the controlled issue- Confirm the competent authority and governing EIA legislation for the actual project location.

- Replace inapplicable Kuwait/KOC references or document why they apply contractually.
- Add a legal register with requirement, source, version, applicability, evidence and responsible owner.

Evidence and limitations Census and livelihood data, stakeholder records, workforce estimates and grievance-management records. Regulatory applicability is unresolved and must be verified before this report is issued or relied upon.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

7.3 Responsibilities, Resources and Corrective Action

Assessment response Demonstration scope: This illustrative response addresses whether responsibilities, resources and corrective action. It shows the expected structure and level of explanation; project-specific values require verification.

The project record identifies Pakistan as the country. The imported checklist refers to Kuwait, KEPA and KOC requirements, which may not match the project jurisdiction. This demonstration therefore does not assert those requirements apply. Before issue, the legal register must be confirmed by a qualified local practitioner and aligned with permit conditions, applicable national law, international commitments and client standards.

Information to include in the controlled issue- Confirm the competent authority and governing EIA legislation for the actual project location.

- Replace inapplicable Kuwait/KOC references or document why they apply contractually.
- Add a legal register with requirement, source, version, applicability, evidence and responsible owner.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. Regulatory applicability is unresolved and must be verified before this report is issued or relied upon.

Section context: 7 — MITIGATION AND ENVIRONMENTAL MANAGEMENT.

8 MONITORING PROGRAMME

Structured EIA chapter

8.1 Monitoring Indicators, Methods and Locations

Assessment response Demonstration scope: This illustrative response addresses whether monitoring indicators, methods and locations. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitations Project design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 8 — MONITORING PROGRAMME.

8.2 Thresholds, Frequency, Reporting and Response

Assessment responseDemonstration scope: This illustrative response addresses whether thresholds, frequency, reporting and response. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 8 — MONITORING PROGRAMME.

9 CUMULATIVE IMPACTS

Structured EIA chapter

9.1 Other Developments and Valued Receptors

Assessment responseDemonstration scope: This illustrative response addresses whether other developments and valued receptors. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 9 — CUMULATIVE IMPACTS.

9.2 Cumulative Effects, Mitigation and Residual Risk

Assessment responseDemonstration scope: This illustrative response addresses whether cumulative effects, mitigation and residual risk. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 9 — CUMULATIVE IMPACTS.

10 CLIMATE, CARBON AND RESILIENCE

Structured EIA chapter

10.1 Greenhouse Gas Emissions and Mitigation

Assessment responseDemonstration scope: This illustrative response addresses whether greenhouse gas emissions and mitigation. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsWaste inventories, emissions calculations, safety studies, monitoring plans and licensed contractor records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 10 — CLIMATE, CARBON AND RESILIENCE.

10.2 Climate Risk, Adaptation and Resilience

Assessment responseDemonstration scope: This illustrative response addresses whether climate risk, adaptation and resilience. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 10 — CLIMATE, CARBON AND RESILIENCE.

11 STAKEHOLDER AND CONSULTATION RECORD

11.1 Stakeholder Identification and Engagement

Assessment responseDemonstration scope: This illustrative response addresses whether stakeholder identification and engagement. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

11.2 Issues Raised, Responses and Commitments

Assessment responseDemonstration scope: This illustrative response addresses whether issues raised, responses and commitments. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

11.3 Grievance and Ongoing Engagement

Assessment responseDemonstration scope: This illustrative response addresses whether grievance and ongoing engagement. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation

records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 11 — STAKEHOLDER AND CONSULTATION RECORD.

12 COMPLIANCE MATRIX

Structured EIA chapter

12.1 Requirement-to-Evidence Compliance Matrix

Assessment responseDemonstration scope: This illustrative response addresses whether requirement-to-evidence compliance matrix. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 12 — COMPLIANCE MATRIX.

12.2 Outstanding Obligations and Actions

Assessment responseDemonstration scope: This illustrative response addresses whether outstanding obligations and actions. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 12 — COMPLIANCE MATRIX.

13 ENVIRONMENTAL INTELLIGENCE AND QA

Structured EIA chapter

13.1 Evidence Traceability and Quality Assurance

Assessment responseDemonstration scope: This illustrative response addresses whether evidence traceability and quality assurance. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

Supporting evidence
EnviroQuant_EIA_Export_Template_Prototype.docx (supporting_evidence)

13.2 Data Gaps, Uncertainty and AI Transparency

Assessment responseDemonstration scope: This illustrative response addresses whether data gaps, uncertainty and ai transparency. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

13.3 Professional Review and Reviewer Decisions

Assessment responseDemonstration scope: This illustrative response addresses whether professional review and reviewer decisions. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and

applicable authority requirements.

Section context: 13 — ENVIRONMENTAL INTELLIGENCE AND QA.

14 CONCLUSIONS AND DECISION READINESS

Structured EIA chapter

14.1 Overall Conclusions and Residual Effects

Assessment responseDemonstration scope: This illustrative response addresses whether overall conclusions and residual effects. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 14 — CONCLUSIONS AND DECISION READINESS.

14.2 Conditions, Priority Actions and Decision Readiness

Assessment responseDemonstration scope: This illustrative response addresses whether conditions, priority actions and decision readiness. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: 14 — CONCLUSIONS AND DECISION READINESS.

A APPENDICES AND EVIDENCE REGISTER

Structured EIA chapter

A.1 Appendix Schedule

Assessment responseDemonstration scope: This illustrative response addresses whether appendix schedule. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

A.2 Evidence Register

Assessment responseDemonstration scope: This illustrative response addresses whether evidence register. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

A.3 Figures, Tables and Supporting Records

Assessment responseDemonstration scope: This illustrative response addresses whether figures, tables and supporting records. It shows the expected structure and level of explanation; project-specific values require verification.

The final report should read as one controlled document with consistent terminology, numbering and cross-references. Conclusions must trace to evidence, while detailed data, drawings, calculations and consultation records should be placed in clearly referenced appendices. Tables and figures should include titles, sources, dates, units, legends and accessible explanatory text.

Information to include in the controlled issue- Generate and verify the table of contents, lists of figures and tables, and appendix references.

- Run a final terminology, unit, citation and cross-reference consistency check.
- Complete technical, legal and editorial quality assurance before controlled issue.

Evidence and limitationsProject design drawings, field survey records, permits, specialist studies and consultation records. Final quantities, coordinates and thresholds must be confirmed against approved design data and applicable authority requirements.

Section context: A — APPENDICES AND EVIDENCE REGISTER.

EVIDENCE TRACEABILITY & COMPLIANCE

Requirement → Evidence → Assessment → Finding → Gap → Recommendation

Requirement	Source	Finding	Gap	Action	Decision
1.1.2 Is the programme for implementation described (timeline, start/finish dates for construction, operation, commissioning, including phases)?	1.1.2	Missing	Timeline for project implementation; Start and finish dates for construction; Start and finish dates for operation; Start and finish dates for commissioning; Description of project phases	Include a dedicated subsection detailing the project implementation programme, specifying timelines, start and finish dates for construction, operation, commissioning, and any phased approach to the project.	Pending
1.1.3 Are all main components of the project described?	1.1.3	Missing	Specific descriptions of all main components of the project; Details on project layout and design specific to the project; Information on construction, operation, and decommissioning phases; Descriptions of inputs, outputs, emissions, waste, and resource use related to the project; Details on programme, workforce, and associated facilities	Include detailed, project-specific descriptions of all main components, supported by design drawings, field surveys, permits, and specialist studies to fully address this checklist item.	Pending
1.1.4 Is the location of each project component identified (maps, plans, diagrams)?	1.1.4; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Explicit maps, plans, or diagrams showing the location of each project component; Clear identification of project component locations with coordinates or spatial references; Reference to or inclusion of visual aids that locate project components within the project area	Include detailed maps, plans, or diagrams that clearly identify the location of each project component. Ensure these visuals are referenced in the project description sections and confirm that coordinates and spatial data are accurate and verified against approved design data.	Pending
1.1.5 Is the layout of the site(s) described (ground levels, buildings, structures, underground works, storage, water features, planting, access, boundaries)?	1.1.5	Missing	Description of ground levels; Description of buildings and structures; Description of underground works; Description of storage areas; Description of water features; Description of planting; Description of access routes; Description of site boundaries	Include a detailed description of the site layout covering ground levels, buildings, structures, underground works, storage, water features, planting, access, and boundaries. Provide supporting project design drawings and field survey records to substantiate the description.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.1.6 For tunneling and earthworks - are activities properly described?	1.1.6; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of tunneling activities including methods, extent, and location; Description of earthworks activities including scope, techniques, and volumes; Details on construction phases related to tunneling and earthworks; Supporting drawings or plans illustrating tunneling and earthworks; Information on equipment, workforce, and schedule for tunneling and earthworks	Include a dedicated subsection in the project description detailing tunneling and earthworks activities. Provide technical descriptions, drawings, and schedules to fully address this checklist item.	Pending
1.1.7 Are all construction activities described?	1.1.7	Missing	Detailed description of all construction activities; Specific construction phases and tasks; Construction methods and techniques; Construction schedule and sequencing; Equipment and machinery to be used during construction	Include a comprehensive description of all construction activities, covering phases, methods, equipment, and scheduling to fully address the checklist item.	Pending
1.1.8 Are all operation activities described?	1.1.8	Missing	Detailed description of all operation activities; Specific operational procedures and processes; Information on operational schedules, equipment, and workforce during operation phase	Include a comprehensive description of all operation activities, covering procedures, schedules, equipment used, and workforce roles during the operation phase to fully address this checklist item.	Pending
1.1.10 Are additional services required described (transport, water, sewerage, waste, electricity, telecoms, roads, harbors, power-lines, etc.)?	1.1.10	Missing	Description of additional services required including transport, water supply, sewerage, waste management, electricity, telecommunications, roads, harbors, power-lines, etc.; Assessment of how these services will be provided or upgraded; Identification of any new infrastructure or modifications to existing services; Potential impacts related to these additional services and their mitigation measures	Include a dedicated subsection in the project description that details all additional services required for the project, their current status, planned upgrades or new infrastructure, and associated environmental and social considerations.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.1.11 Are any developments likely to occur as a consequence of the project identified?	1.1.11	Missing	Identification of developments likely to occur as a consequence of the project; Assessment or discussion of induced or secondary developments; Evidence or references to potential follow-on projects or land use changes resulting from the project	Include a dedicated subsection that identifies and assesses any developments likely to occur as a consequence of the project, supported by evidence such as planning documents, consultation records, or specialist studies. This should be integrated within the cumulative impacts or project description sections.	Pending
1.1.12 Are existing activities which will alter or cease identified?	1.1.12	Missing	Identification of existing activities that will be altered or cease due to the project; Description of how these activities will be affected; Evidence or data supporting these identifications	Include a dedicated subsection in the project description that explicitly identifies existing activities on the project site or in the vicinity that will be altered or cease due to the project. Provide supporting evidence such as field surveys, stakeholder consultations, or permits to substantiate these changes.	Pending
1.1.13 Are other existing or planned developments with potential cumulative effects identified?	1.1.13	Missing	Identification of other existing developments near the project; Identification of planned developments in the project vicinity; Assessment or listing of potential cumulative effects from these developments; Reference to cumulative effects assessment methodology or data sources	Include a dedicated subsection or table listing other existing and planned developments in the project area that may contribute to cumulative effects. Provide analysis or discussion of their potential combined impacts with the project.	Pending
1.2.1 Is the area of land occupied by permanent components quantified and shown on scaled maps?	1.2.1	Missing	Quantification of land area occupied by permanent components; Scaled maps showing the land area occupied by permanent components; Specific project design drawings or maps confirming land take	Include detailed quantification of the land area occupied by permanent project components and provide scaled maps illustrating this information in the project description section.	Pending
1.3.1 Is the area of land required temporarily for construction quantified and mapped?	1.3.1; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Quantification of the temporary land area required for construction; Mapping or spatial representation of the temporary construction land area; Reference to project design drawings or field survey records showing temporary land use	Include detailed project design drawings or maps that specify the temporary land area required for construction, along with quantified measurements. This should be supported by field survey records or specialist studies to fully address the checklist item.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.3.2 Is restoration and after-use of temporarily occupied land described?	1.3.2	Missing	Description of restoration measures for temporarily occupied land; After-use plans for temporarily occupied land; Mitigation measures to restore land quality and function; Timelines and responsibilities for restoration activities; Monitoring and verification of restoration success	Include a dedicated subsection in the project description or construction /decommissioning sections that details the restoration and after-use plans for temporarily occupied land. This should cover methods, timelines, responsible parties, and monitoring to ensure land is returned to an acceptable condition.	Pending
1.3.4 Is the size of structures/works identified (floor area, height, excavations, embankments, stacks, water depth, etc.)?	1.3.4	Missing	Specific identification of sizes of structures or works including floor area, height, excavations, embankments, stacks, water depth, etc.; Project design drawings or descriptions detailing dimensions of project components.; Quantitative data or measurements related to structural sizes.	Include detailed descriptions and quantitative data on the size of all relevant structures and works in the project description section, supported by design drawings or technical specifications.	Pending
1.6.3 Locations for final disposal of solid wastes discussed?	1.6.3	Missing	Identification and description of final disposal locations for solid wastes; Assessment of environmental impacts related to solid waste disposal sites; Compliance with relevant regulations and permits for waste disposal; Alternatives considered for solid waste disposal locations; Mitigation measures for solid waste disposal impacts	Include a dedicated subsection in the project description or waste management section that clearly identifies and discusses the locations for final disposal of solid wastes, supported by relevant studies, permits, and assessments.	Pending
1.3.5 Is the form and appearance of structures described (materials, colors, design, plant species, etc.)?	1.3.5	Missing	Description of materials used in structures; Colors of structures; Design details of structures; Plant species proposed for landscaping or screening; Visual appearance and aesthetic considerations	Include a detailed description of the form and appearance of all project structures, specifying materials, colors, design features, and landscaping plant species to fully address this checklist item.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.3.6 For urban projects - numbers and characteristics of new populations/businesses described?	1.3.6; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of numbers of new populations expected due to the project; Characteristics of new populations (e.g., demographics, socio-economic status); Description of numbers of new businesses expected due to the project; Characteristics of new businesses (e.g., type, size, sector); Any projections or estimates related to population or business growth linked to the project	Include a detailed section in the project description that quantifies and characterizes the new populations and businesses expected as a result of the urban project. This should include demographic data, business types, sizes, and any relevant socio-economic characteristics to fully address the checklist item.	Pending
1.3.7 For displacement projects - numbers and characteristics of displaced people/businesses described?	1.3.7; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of displacement impacts; Numbers of displaced people and businesses; Characteristics of displaced people and businesses; Social impact assessment related to displacement; Mitigation measures for displacement	Include a dedicated subsection in the project description or social impact assessment that details the numbers and characteristics of displaced people and businesses, supported by field surveys, consultation records, and specialist studies.	Pending
1.3.8 For transport projects - type, volume, temporal pattern, and distribution of traffic described?	1.3.8	Missing	Description of traffic type (e.g., vehicle types); Traffic volume (e.g., number of vehicles); Temporal pattern of traffic (e.g., peak hours, seasonal variations); Distribution of traffic (e.g., routes, directions)	Include a dedicated subsection in the project description that details the type, volume, temporal pattern, and distribution of traffic associated with the transport project. This should be supported by traffic studies, surveys, or modeling data to fully address the checklist item.	Pending
1.4.1 Are all operating processes described (manufacturing, extraction, etc.)?	1.4.1	Missing	Detailed description of all operating processes (manufacturing, extraction, etc.); Process flow diagrams or stepwise explanation of operations; Information on technology or methods used in operations	Include a comprehensive description of all operating processes involved in the project, detailing manufacturing, extraction, or other relevant operational activities. Provide process flow diagrams or stepwise explanations to clarify the operations for environmental impact assessment.	Pending
1.4.2 Are types and quantities of outputs described?	1.4.2	Missing	Description of types of outputs produced by the project; Quantitative data on output volumes or amounts; Details linking outputs to environmental or social impacts	Include a dedicated subsection detailing the types and quantities of outputs generated by the project, supported by design data, calculations, or specialist studies to enable thorough impact assessment.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.4.3 Are types and quantities of raw materials and energy needed discussed?	1.4.3	Missing	Specific identification of raw materials required for the project; Quantities of each raw material needed; Types and quantities of energy sources required; Discussion or data on energy consumption during construction and operation phases; Supporting evidence such as inventories, calculations, or supplier information	Include a dedicated subsection or detailed content within section 2.4 or a related section that explicitly identifies and quantifies the raw materials and energy inputs required for the project. Provide supporting data, calculations, and references to design documents or supplier information to substantiate the quantities and types discussed.	Pending
1.4.4 Are environmental implications of sourcing raw materials discussed?	1.4.4	Missing	Discussion of environmental impacts related to raw material extraction and sourcing; Assessment of sustainability and environmental footprint of raw material supply chains; Consideration of alternatives or mitigation measures for raw material sourcing impacts; Evidence or data supporting the environmental implications of raw material procurement	Include a dedicated subsection in the project description or inputs/resources section that explicitly addresses the environmental implications of sourcing raw materials. This should cover extraction impacts, supply chain sustainability, alternatives considered, and mitigation measures. Supporting evidence such as specialist studies or supplier information should be incorporated.	Pending
1.4.5 Is efficiency in use of energy and raw materials discussed?	1.4.5	Missing	Discussion of energy efficiency measures or considerations in project design and operation; Assessment of raw material efficiency or resource optimization; Comparative analysis of alternatives based on energy and raw material efficiency; Quantitative or qualitative data on energy and raw material consumption and efficiency	Include a dedicated section or subsection that explicitly addresses efficiency in the use of energy and raw materials. This should cover design choices, operational practices, and alternatives assessment criteria related to resource efficiency.	Pending
1.5.1 Are hazardous materials identified and quantified (construction, operation, commissioning)?	1.5.1	Missing	Identification of hazardous materials used or generated during construction, operation, and commissioning; Quantification of hazardous materials including types, volumes, and concentrations; Safety and handling procedures related to hazardous materials; References to relevant permits, safety studies, or regulatory compliance regarding hazardous materials	Include a dedicated subsection in the project description or inputs/outputs section that explicitly identifies and quantifies hazardous materials associated with all project phases. Provide supporting evidence such as safety studies, inventories, and compliance documentation.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.5.2 Is transport of raw materials and traffic movements discussed?	1.5.2	Missing	Discussion of transport of raw materials including modes, routes, and volumes; Assessment of traffic movements during construction and operation phases; Traffic impact assessment including effects on local roads and communities; Mitigation measures for traffic and transport-related impacts; Evidence such as traffic studies, transport plans, or logistics assessments	Include a dedicated subsection in the project description addressing transport of raw materials and traffic movements. Provide detailed information on transport logistics, traffic volumes, routes, timing, and potential impacts. Conduct and include traffic impact assessments and propose mitigation measures to manage traffic-related effects.	Pending
1.5.3 Is employment created or lost discussed (by phase)?	1.5.3	Missing	Discussion of employment created or lost during construction phase; Discussion of employment created or lost during operation phase; Discussion of employment created or lost during decommissioning phase; Quantitative or qualitative estimates of workforce changes by phase; Consideration of local employment effects and skills requirements	Include a dedicated subsection within the project description or social impact assessment that details employment impacts by phase, supported by workforce estimates and analysis of local socio-economic effects.	Pending
1.5.4 Are access arrangements and worker/visitor traffic movements estimated?	1.5.4; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of access arrangements to the project site; Estimates or projections of worker and visitor traffic movements during construction and operation phases; Traffic management plans or strategies to handle worker/visitor movements; Evidence such as traffic studies, site plans showing access routes, or consultation records regarding traffic impacts	Include a dedicated subsection in the project description that details access arrangements and provides estimates of worker and visitor traffic movements. Support this with traffic studies, site layout plans, and any relevant consultation or permits related to traffic management.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.5.5 Is housing and services for employees discussed (if relevant)?	1.5.5; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Discussion of employee housing provisions; Description of services available to employees (e.g., healthcare, recreation, transport); Assessment of the adequacy and location of employee housing; Consideration of impacts related to employee accommodation and services; Alternatives or options regarding employee housing and services	Include a dedicated subsection in the project description or workforce section that details housing and services for employees, if relevant to the project. This should cover the type, location, capacity, and management of employee accommodation and associated services, along with any environmental or social impacts and mitigation measures.	Pending
1.5.6 Are types and quantities of solid waste identified (by phase)?	1.5.6	Missing	Identification of solid waste types generated during each project phase (construction, operation, decommissioning); Quantification of solid waste amounts by phase; Waste management plans or inventories related to solid waste; Supporting data such as waste inventories, calculations, or specialist studies	Include a detailed section specifying the types and quantities of solid waste expected to be generated during each project phase, supported by waste inventories or calculations. This should be integrated into the project description or waste management sections to fully address the checklist item.	Pending
1.6.1 Composition and hazards of solid wastes discussed?	1.6.1	Missing	Description of solid waste types generated by the project; Quantification of solid waste volumes; Identification of hazardous components in solid wastes; Assessment of potential hazards associated with solid wastes; Management and mitigation measures for solid waste hazards	Include a dedicated subsection detailing the composition and hazards of solid wastes generated by the project, supported by waste inventories, safety studies, and licensed contractor records as applicable.	Pending
1.6.2 Methods for collecting, storing, treating, transporting, and disposing of solid wastes described?	1.6.2	Missing	Description of methods for collecting solid wastes; Description of methods for storing solid wastes; Description of methods for treating solid wastes; Description of methods for transporting solid wastes; Description of methods for disposing of solid wastes	Include a dedicated subsection detailing the procedures and technologies for solid waste management throughout the project lifecycle, covering collection, storage, treatment, transportation, and disposal methods, supported by relevant permits and contractor information.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.6.4 Types and quantities of liquid effluents identified (by phase)?	1.6.4	Missing	Identification of types of liquid effluents generated during each project phase; Quantities or volumes of liquid effluents expected; Phase-specific effluent data (construction, operation, decommissioning); Description of effluent sources and characteristics; Supporting data such as calculations, monitoring plans, or specialist studies related to liquid effluents	Include a dedicated subsection detailing the types and quantities of liquid effluents expected from the project during each phase. Provide quantitative data supported by calculations or specialist studies. This information is essential for impact assessment and designing appropriate mitigation measures.	Pending
1.6.5 Composition and hazards of liquid effluents discussed?	1.6.5	Missing	Description of liquid effluent types generated by the project; Chemical and physical composition of liquid effluents; Identification of hazardous substances in liquid effluents; Assessment of potential environmental and health hazards from liquid effluents; Mitigation measures or management plans for liquid effluent discharge	Include a dedicated subsection detailing the composition and hazards of liquid effluents expected from the project. Provide chemical analyses, hazard identification, and proposed management or treatment measures to address potential impacts.	Pending
1.6.6 Methods for collecting, storing, treating, transporting, and disposing of liquid effluents described?	1.6.6	Missing	Description of methods for collecting liquid effluents; Description of methods for storing liquid effluents; Description of methods for treating liquid effluents; Description of methods for transporting liquid effluents; Description of methods for disposing of liquid effluents; Relevant permits or standards for liquid effluent management; Mitigation measures related to liquid effluent handling	Include a dedicated subsection detailing the methods for collecting, storing, treating, transporting, and disposing of liquid effluents. Provide supporting evidence such as design drawings, treatment technology descriptions, permits, and compliance with relevant environmental standards.	Pending
1.6.7 Locations for final disposal of liquid effluents discussed?	1.6.7	Missing	Identification and description of locations for final disposal of liquid effluents; Assessment of environmental impacts related to liquid effluent disposal sites; Compliance with regulatory requirements for effluent disposal; Mitigation measures for potential impacts from effluent disposal	Include a dedicated subsection detailing the locations for final disposal of liquid effluents, supported by design drawings, permits, and specialist studies. Assess environmental impacts and compliance with regulations, and describe mitigation measures to address potential risks.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.6.8 Types and quantities of gaseous and particulate emissions identified (by phase)?	1.6.8	Missing	Identification of types of gaseous emissions by project phase; Quantification of gaseous emissions by project phase; Identification of types of particulate emissions by project phase; Quantification of particulate emissions by project phase; Emissions calculations or inventories; Phase-specific emissions data (construction, operation, decommissioning)	Include detailed emissions inventories and calculations for gaseous and particulate emissions for each project phase (construction, operation, decommissioning). Provide specialist studies or monitoring plans that quantify these emissions to fully address the checklist item.	Pending
1.6.9 Composition and hazards of air emissions discussed?	1.6.9	Missing	Description of air emissions composition; Identification of hazardous air pollutants; Quantitative or qualitative data on air emissions; Assessment of hazards associated with air emissions; Mitigation measures for air emissions hazards	Include a dedicated subsection detailing the types and quantities of air emissions expected from the project, their hazardous properties, potential impacts, and proposed mitigation measures.	Pending
1.6.10 Methods for collecting, treating, and discharging air emissions described?	1.6.10; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of methods for collecting air emissions; Description of treatment technologies or processes for air emissions; Description of discharge methods or controls for air emissions; Supporting data or references for air emissions management	Include a dedicated subsection detailing the methods for collecting, treating, and discharging air emissions, supported by design drawings, permits, and specialist studies as applicable.	Pending
1.6.11 Locations and characteristics of air discharges identified (stack height, velocity, temperature)?	1.6.11	Missing	Identification of air discharge locations; Stack height specifications; Stack gas velocity data; Stack gas temperature data; Details on emission points and characteristics	Include detailed descriptions and specifications of all air discharge points, including stack height, velocity, and temperature, supported by design drawings and emission data to fully address this checklist item.	Pending
1.6.12 Potential for resource recovery from wastes discussed?	1.6.12	Missing	Discussion of potential for resource recovery from wastes; Waste management strategies including recovery, recycling, or reuse options; Assessment of waste types and quantities relevant to recovery potential; Mitigation or enhancement measures to maximize resource recovery	Include a dedicated subsection in the EIA report that evaluates the potential for resource recovery from wastes generated by the project, supported by waste inventories and recovery feasibility studies.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.6.13 Sources of noise, heat, light, or electromagnetic radiation identified and quantified?	1.6.13	Missing	Identification of noise sources during construction and operation phases; Quantification of noise levels and comparison with standards; Identification and quantification of heat emissions from project components; Assessment of light emissions and potential light pollution; Identification and quantification of electromagnetic radiation sources; Specialist studies or measurements related to noise, heat, light, and electromagnetic radiation; Mitigation measures for noise, heat, light, and electromagnetic radiation impacts	Include a dedicated section or subsection that identifies and quantifies sources of noise, heat, light, and electromagnetic radiation from the project during construction, operation, and decommissioning phases. Incorporate specialist studies or measurements and compare results with relevant standards or guidelines. Document mitigation measures to address potential impacts.	Pending
1.6.14 Methods for estimating residues/emissions and difficulties discussed?	1.6.14; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of methods used to estimate residues and emissions; Discussion of difficulties or uncertainties in estimating residues and emissions; Supporting data or references for estimation methods	Include a detailed description of the methods used to estimate residues and emissions, along with a discussion of any difficulties or uncertainties encountered in these estimations. Provide supporting data, calculations, or references to specialist studies to substantiate the methods.	Pending
1.6.15 Uncertainty attached to estimates discussed?	1.6.15	Missing	Discussion of uncertainty attached to estimates; Quantification or qualitative description of uncertainty or confidence in data; Explanation of how uncertainty affects project decisions or impact assessments; Inclusion of sensitivity analysis or error margins in estimates	Include a dedicated subsection discussing the uncertainty attached to key estimates in the project description and impact assessments. This should cover the nature and sources of uncertainty, methods used to quantify or qualify it, and implications for decision-making and risk management.	Pending
1.7.1 Are risks associated with the project discussed (hazardous materials, spills, fire, explosion, traffic, process failure, natural disasters)?	1.7.1	Missing	Discussion of hazardous materials risks; Assessment of spill risks; Fire and explosion risk analysis; Traffic risk considerations; Process failure risk evaluation; Natural disaster risk assessment; Mitigation measures for identified risks; Safety studies or risk management plans	Include a dedicated section or subsection that explicitly discusses all relevant project risks including hazardous materials, spills, fire, explosion, traffic, process failure, and natural disasters. Provide supporting evidence such as safety studies, risk assessments, and proposed mitigation measures to fully address this checklist item.	Pending

Requirement	Source	Finding	Gap	Action	Decision
1.7.2 Are measures to prevent and respond to accidents described (prevention, training, contingency, emergency plans)?	1.7.2	Missing	Description of accident prevention measures; Training programs for accident prevention and response; Contingency plans for potential accidents; Emergency response plans and procedures	Include a dedicated subsection detailing accident prevention measures, training protocols, contingency planning, and emergency response plans to fully address this checklist item.	Pending
2.1 Is the process by which the project was developed described, and are alternatives considered?	2.1	Needs Improvement	Description of the process by which the project was developed; Identification and description of specific alternatives considered; Rationale for selecting or rejecting alternatives; Comparative analysis of alternatives with respect to environmental and social factors; Evidence such as design documents, consultation records, or specialist studies supporting alternatives assessment	Include a detailed narrative describing the project development process and the specific alternatives considered, supported by evidence such as design documents and consultation records. Provide a comparative analysis of alternatives and rationale for the preferred option to fully address the checklist item.	Pending
2.2 Are the alternatives realistic and genuine?	2.2	Needs Improvement	Project-specific descriptions of alternatives considered; Feasibility analysis demonstrating realism of alternatives; Justification for why alternatives are genuine and viable options; Comparative analysis showing alternatives are meaningfully different and implementable	Include detailed, project-specific descriptions and feasibility assessments of each alternative to demonstrate their realism and genuineness. Provide justification and comparative analysis to support the selection of alternatives.	Pending
2.3 Are the main reasons for choice of the proposed project explained (including environmental reasons)?	2.3	Needs Improvement	Explicit explanation of main reasons for choosing the proposed project; Inclusion of environmental reasons influencing project choice; Comparison summary highlighting why the preferred alternative was selected	Include a clear narrative explaining the main reasons for selecting the proposed project, emphasizing environmental considerations and how alternatives were comparatively evaluated leading to the preferred choice.	Pending

Requirement	Source	Finding	Gap	Action	Decision
2.4 Are the main environmental effects of the alternatives compared with the proposed project?	2.4	Partially Compliant	Project-specific comparative analysis of main environmental effects of each alternative versus the proposed project; Impact register connecting activities, pathways, receptors, and significance ratings for all alternatives and the proposed project; Explicit statement of prediction methods, assessment criteria, and evidence for each material effect across alternatives; Separation of pre-mitigation and residual effects for alternatives and the proposed project; Summary comparison highlighting differences in environmental effects among alternatives and the proposed project	Incorporate project-specific data and a clear comparative analysis of the main environmental effects of each alternative relative to the proposed project. Include detailed impact registers, assessment criteria, and separate pre- and post-mitigation effects to fully address the checklist item.	Pending
3.1.1 Existing land uses and people using the land described?	3.1.1; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of existing land uses within the project area; Identification and characterization of people using the land (e.g., residents, farmers, indigenous groups); Data sources or survey results detailing land use patterns and user activities; Maps or spatial data illustrating land use distribution; Discussion of land tenure or ownership relevant to land use	Include a dedicated subsection detailing existing land uses and the people using the land, supported by relevant data such as census information, stakeholder consultations, land use maps, and livelihood studies. This should be integrated into the social and land use baseline section to fully address the checklist item.	Pending
3.1.2 Topography, geology, and soils described?	3.1.2	Missing	Description of topography of the project area; Description of geology of the project area; Description of soils in the project area; Relevant maps or survey data supporting topography, geology, and soils; Specialist studies or field survey records related to physical environment	Include a dedicated subsection describing the topography, geology, and soils of the project area, supported by field surveys, maps, and specialist studies as appropriate. This should provide baseline data necessary for impact assessment and mitigation planning.	Pending

Requirement	Source	Finding	Gap	Action	Decision
3.1.3 Significant topographic/geological features and soil conditions (quality, stability, erosion, contamination) described?	3.1.3	Missing	Description of significant topographic features; Description of significant geological features; Assessment of soil quality; Assessment of soil stability; Assessment of soil erosion potential; Assessment of soil contamination	Include a dedicated subsection describing the significant topographic and geological features of the project area, along with detailed information on soil conditions including quality, stability, erosion risks, and contamination status. Support this with relevant field survey data, specialist studies, and maps.	Pending
3.1.4 Fauna, flora, and habitats described and mapped?	3.1.4	Missing	Description of fauna species present in the study area; Description of flora species present in the study area; Description of habitats present in the study area; Maps illustrating the distribution of fauna, flora, and habitats; Seasonally appropriate ecological survey data supporting descriptions; Species records and conservation status information	Include detailed descriptions and mapping of fauna, flora, and habitats based on seasonally appropriate ecological surveys and species records. Provide habitat maps and conservation status information to fully address the checklist item.	Pending
3.1.5 Species populations and protected areas/species defined?	3.1.5	Missing	Identification and description of species populations in the project area; Definition and mapping of protected areas within or near the project area; Listing of protected species potentially affected by the project; Conservation status and population trends of relevant species; Supporting ecological survey data or specialist studies specific to species and protected areas	Include detailed ecological survey results and mapping that identify species populations and protected areas/species relevant to the project. Provide conservation status and any relevant protection designations to fully address this checklist item.	Pending
3.1.6 Water environment described?	3.1.6	Missing	Description of surface water bodies and hydrology; Groundwater conditions and aquifers; Water quality baseline data; Identification of water-dependent ecosystems or receptors; Potential impacts on water environment from the project; Mitigation measures related to water environment; Monitoring plans for water quality and hydrology	Include a dedicated subsection describing the water environment baseline conditions, potential impacts, and mitigation measures. Provide relevant data, maps, and references to specialist studies or surveys on water resources.	Pending

Requirement	Source	Finding	Gap	Action	Decision
3.1.7 Hydrology, water quality, and water uses described?	3.1.7	Missing	Description of hydrology including surface and groundwater features; Water quality data and parameters relevant to the project area; Current water uses and users in the project vicinity; Assessment of potential impacts on hydrology and water quality; Mitigation measures related to water resources	Include a dedicated subsection describing the hydrology, water quality, and water uses in the project area, supported by relevant data and studies. Add commitments and monitoring plans related to water resources as per the general guidance in the draft.	Pending
3.1.8 Local climate, meteorology, and air quality described?	3.1.8	Missing	Description of local climate characteristics (temperature, precipitation, seasonal variations); Meteorological data (wind speed and direction, humidity, atmospheric pressure); Air quality baseline data (pollutant concentrations, sources, monitoring results); Discussion of how local climate and meteorology may influence project impacts or mitigation measures	Include a dedicated subsection in the environmental baseline that provides detailed descriptions and data on local climate, meteorology, and air quality. Incorporate relevant monitoring data, specialist studies, and authoritative sources to support the assessment. Define commitments for ongoing monitoring and management of air quality and meteorological factors.	Pending
3.1.9 Existing noise climate described?	3.1.9	Missing	Description of existing noise climate including baseline noise levels; Noise measurement data or survey results; Identification of noise sources in the study area; Analysis of temporal and spatial noise variations; Relevant noise standards or guidelines referenced; Commitments or monitoring plans related to noise	Include a dedicated subsection describing the existing noise climate with baseline noise measurements, sources, and relevant standards. Add commitments for noise monitoring and mitigation as appropriate.	Pending
3.1.10 Existing light, heat, and electromagnetic radiation described?	3.1.10	Missing	Description of existing ambient light levels; Description of existing heat emissions or thermal environment; Description of existing electromagnetic radiation levels; Baseline measurements or survey data for light, heat, and electromagnetic radiation; Identification of sources contributing to these environmental parameters	Include a dedicated subsection in the environmental baseline describing existing conditions of light, heat, and electromagnetic radiation, supported by field measurements or credible data sources. This should cover ambient levels, sources, spatial and temporal variations, and relevance to sensitive receptors.	Pending

Requirement	Source	Finding	Gap	Action	Decision
3.1.11 Material assets (buildings, minerals, water resources) described?	3.1.11	Missing	Description of buildings within the project area; Description of mineral resources present or potentially affected; Description of water resources including surface and groundwater relevant to the project area; Assessment of the condition and significance of these material assets; Evidence such as maps, surveys, or studies documenting these assets	Include a dedicated subsection describing material assets (buildings, minerals, water resources) within the project area, supported by relevant surveys, maps, and studies to fully address this checklist item.	Pending
3.2.1 Archaeological, historic, architectural, or cultural features described (including protected sites)?	3.2.1	Missing	Description of archaeological features in the study area; Description of historic features in the study area; Description of architectural features in the study area; Identification and description of protected cultural heritage sites; Specialist studies or surveys related to cultural heritage; Consultation records with heritage authorities or local communities	Include a dedicated subsection describing archaeological, historic, architectural, and cultural features within the project area, supported by specialist surveys and consultation with relevant authorities. Provide details on protected sites and their status, and incorporate commitments for mitigation and monitoring as appropriate.	Pending
3.2.2 Demographic, social, and socio-economic conditions described?	3.2.2	Missing	Demographic data (population size, density, age distribution); Social conditions (community structure, social cohesion, vulnerable groups); Socio-economic conditions (employment, income levels, livelihoods, economic activities); Relevant baseline statistics or survey results; Analysis of social and economic context of the study area	Include a dedicated subsection or content that provides detailed demographic, social, and socio-economic baseline information for the study area, supported by relevant data sources such as census data, livelihood surveys, and stakeholder consultations.	Pending
3.2.3 Future changes in the environment without the project (No Project / Moving Baseline) described?	3.2.3	Missing	Explicit description of future environmental changes expected without the project (no project scenario); Analysis or projection of moving baseline conditions; Discussion of how the environment is likely to evolve absent the project; Supporting evidence or references for future baseline conditions without the project	Include a dedicated subsection that explicitly describes the future environmental conditions expected without the project, supported by relevant data or projections. This should cover anticipated changes due to natural processes, other developments, or trends, to establish a moving baseline for impact assessment.	Pending

Requirement	Source	Finding	Gap	Action	Decision
3.3.1 Study area defined widely enough?	3.3.1	Missing	Explicit definition of the study area boundaries; Justification or rationale for the study area extent; Evidence that the study area covers all relevant environmental and social receptors; Maps or coordinates delineating the study area; Discussion of how the study area relates to potential project impacts	Include a clear and detailed description of the study area boundaries with justification for their extent to ensure it is sufficiently wide to capture all relevant environmental and social factors potentially affected by the project. Provide maps or coordinates and explain how the study area relates to the project footprint and potential impact zones.	Pending
3.3.2 All relevant agencies contacted?	3.3.2	Missing	Explicit identification and listing of all relevant agencies contacted; Documentation or records of communication with these agencies; Confirmation that agency feedback has been incorporated or considered	Include a dedicated section or appendix listing all relevant agencies contacted, dates and methods of contact, and summaries of their input or responses to demonstrate compliance with this checklist item.	Pending
3.3.3 Sources of data adequately referenced?	3.3.3	Needs Improvement	Explicit citations or references to data sources used in the environmental description; A bibliography or reference list of data sources; Clear linkage between data presented and their sources	Include explicit citations and references for all data sources used in the environmental baseline description to ensure transparency and verifiability.	Pending
3.3.4 Survey methods, difficulties, and uncertainties described?	3.3.4	Missing	Description of survey methods used; Discussion of difficulties encountered during surveys; Explanation of uncertainties in survey data or results	Include a dedicated subsection detailing the survey methods employed, any difficulties or limitations experienced during data collection, and an assessment of uncertainties affecting the survey findings to fully address checklist item 3.3.4.	Pending
3.3.5 Methods appropriate for the purpose?	3.3.5; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of specific methods used for environmental baseline assessment; Justification or rationale for method selection demonstrating appropriateness; Details on how methods align with project scope and environmental context; Information on any limitations or constraints of the methods used; Evidence of method validation or specialist input	Include a detailed description of the methods used for environmental baseline studies, explaining why they are appropriate for the project context and objectives. Provide justification for method selection, any limitations encountered, and how these methods ensure reliable and relevant data collection.	Pending

Requirement	Source	Finding	Gap	Action	Decision
3.3.6 Important data gaps identified and how they were handled explained?	3.3.6	Missing	Identification of important data gaps in environmental baseline data; Explanation of how identified data gaps were addressed or managed; Discussion of limitations related to data gaps and their implications on the assessment	Include a dedicated subsection or statements within the environmental baseline description that explicitly identify any important data gaps encountered during data collection and explain the methods or approaches used to handle these gaps (e.g., additional surveys, expert judgment, assumptions). This will improve transparency and robustness of the baseline assessment.	Pending
4.1.1 Scoping process described?	4.1.1	Needs Improvement	Explicit description of the scoping process undertaken; Identification of key issues and valued components during scoping; Stakeholder involvement in the scoping process; Criteria or rationale used to define the scope of the assessment; Documentation or records of scoping decisions	Include a detailed description of the scoping process, including how key issues were identified, stakeholder engagement during scoping, and the rationale for defining the scope of the assessment. Provide supporting documentation or references to consultation records to demonstrate a robust scoping process.	Pending
4.1.2 Systematic approach to scoping evident?	4.1.2	Needs Improvement	Explicit description of the scoping methodology; Criteria or process for identifying significant effects; Documentation of scoping steps or decisions; Integration of stakeholder input in scoping; Clear linkage between scoping and assessment boundaries	Include a dedicated subsection explicitly describing the systematic scoping approach, detailing methods, criteria, and decision-making processes used to define the scope of the assessment. Provide evidence of how scoping was conducted and refined, including stakeholder involvement if applicable.	Pending
4.1.3 Full consultation carried out during scoping?	4.1.3; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Description of consultation activities during scoping; Records or summaries of stakeholder engagement during scoping; Evidence of issues raised and responses during scoping; Details on how consultation was conducted and documented	Include a dedicated section detailing the consultation process carried out during the scoping phase, including stakeholder identification, engagement methods, issues raised, responses, and commitments. Provide consultation records or summaries as evidence.	Pending

Requirement	Source	Finding	Gap	Action	Decision
4.1.4 Comments and views of consultees presented?	4.1.4	Missing	Presentation or summary of comments and views from consultees; Reference to consultation records or stakeholder engagement outcomes; Explanation of how consultee feedback influenced the assessment or project design	Include a dedicated subsection summarizing the comments and views of consultees, supported by consultation records and demonstrating how these inputs have been considered in the assessment process.	Pending
4.4.1 Secondary effects described?	4.4.1	Missing	Identification and description of secondary (indirect) effects of the project; Assessment of how primary impacts may lead to secondary effects; Mitigation measures for secondary effects if identified; Evidence or studies supporting the analysis of secondary effects	Include a dedicated subsection or integrate into existing impact assessment sections a clear description and evaluation of secondary effects associated with the project. Provide evidence or references to support the identification and assessment of these effects, and outline any mitigation or management measures.	Pending
4.4.2 Temporary/short-term effects described?	4.4.2	Missing	Explicit description of temporary or short-term effects during construction or other phases; Identification and characterization of temporary impacts on environment and communities; Mitigation measures specific to temporary or short-term effects; Summary of residual temporary effects after mitigation	Include a dedicated subsection or paragraphs explicitly describing temporary and short-term effects, their significance, mitigation measures, and residual impacts to fully address this checklist item.	Pending
4.4.3 Permanent effects described?	4.4.3	Missing	Explicit description of permanent effects resulting from the project; Identification and characterization of which effects are permanent versus temporary; Summary of the nature, extent, and duration of permanent effects; Mitigation measures related to permanent effects if any; Evidence or data supporting the assessment of permanent effects	Include a dedicated subsection or content explicitly describing the permanent effects of the project, detailing their nature, extent, duration, and any mitigation or management measures. Provide supporting evidence such as specialist studies or field survey data to substantiate the description.	Pending

Requirement	Source	Finding	Gap	Action	Decision
4.4.4 Long-term effects described?	4.4.4	Missing	Explicit description of long-term environmental effects; Assessment of the duration and persistence of impacts beyond the operational phase; Discussion of cumulative and residual long-term effects; Mitigation measures specifically targeting long-term impacts; Evidence or data supporting long-term effect predictions	Include a dedicated section or subsection explicitly describing and assessing the long-term effects of the project, supported by evidence and clear explanations. This should cover the nature, duration, significance, and mitigation of long-term impacts to meet EIA requirements.	Pending
4.4.5 Ancillary activities effects described?	4.4.5	Missing	Description of ancillary activities associated with the project; Assessment of likely significant effects from ancillary activities; Mitigation measures for ancillary activities effects; Summary of residual effects related to ancillary activities	Include a dedicated subsection describing ancillary activities, their potential environmental and social effects, mitigation measures, and residual impacts to fully address this checklist item.	Pending
4.4.6 Indirect/consequential development effects described?	4.4.6	Missing	Identification and description of indirect or consequential development effects; Assessment of the significance of indirect effects; Mitigation measures for indirect effects; Evidence or studies supporting indirect effects analysis; Summary of residual indirect effects after mitigation	Include a dedicated section or subsection explicitly addressing indirect and consequential development effects, supported by relevant evidence and analysis. This should cover identification, assessment, mitigation, and residual effects to fully comply with EIA requirements.	Pending
4.4.7 Cumulative effects with other developments described (including worst-case)?	4.4.7	Missing	Identification and description of other developments in the area; Assessment of cumulative effects including worst-case scenarios; Mitigation measures for cumulative impacts; Summary of residual cumulative effects; Supporting evidence such as studies or consultation records related to cumulative impacts	Include a dedicated section that identifies other developments in the vicinity, assesses cumulative effects including worst-case scenarios, and discusses mitigation and residual risks. Provide supporting evidence and references to specialist studies or consultation records.	Pending
4.4.8 Geographic extent, duration, frequency, reversibility, probability described?	4.4.8	Missing	Description of geographic extent of effects; Description of duration of effects; Description of frequency of effects; Description of reversibility of effects; Description of probability of effects	Include detailed descriptions and analyses of the geographic extent, duration, frequency, reversibility, and probability of the likely significant effects in the impact assessment sections to fully address this checklist item.	Pending

Requirement	Source	Finding	Gap	Action	Decision
4.5.1 Primary and secondary effects on human health and welfare described/quantified?	4.5.1	Missing	Description of primary effects on human health (e.g., exposure to pollutants, noise, accidents); Description of secondary effects on human welfare (e.g., social, economic, psychological impacts); Quantification or qualitative assessment of health and welfare impacts; Mitigation measures specifically targeting health and welfare effects; Evidence from health risk assessments or specialist studies related to human health and welfare	Include a dedicated section that explicitly describes and quantifies the primary and secondary effects of the project on human health and welfare. This should incorporate specialist health risk assessments, exposure analysis, and consideration of social and economic welfare impacts, along with proposed mitigation measures.	Pending
4.5.2 Impacts on biodiversity, climate change, and sustainable development discussed?	4.5.2	Needs Improvement	Explicit assessment of biodiversity impacts; Discussion of climate change impacts and greenhouse gas emissions; Consideration of sustainable development principles; Mitigation measures for biodiversity and climate change impacts; Summary of residual effects related to biodiversity and climate change; Evidence from specialist studies or field surveys specific to these impacts	Develop detailed, project-specific sections explicitly addressing impacts on biodiversity, climate change, and sustainable development. Include evidence from specialist studies, mitigation strategies, and residual effect summaries to fully address this checklist item.	Pending
4.6.1 Significance discussed in terms of legal compliance and sensitivity of receptors?	4.6.1	Missing	Discussion of relevant environmental laws, regulations, and standards applicable to the project impacts; Identification and characterization of sensitive receptors potentially affected by the project; Analysis of impact significance explicitly linked to legal compliance and receptor sensitivity; Clear explanation of how legal thresholds and receptor sensitivity influence the significance determination	Include a dedicated section that explicitly discusses impact significance in the context of applicable legal requirements and the sensitivity of identified receptors. This should reference relevant laws, standards, and receptor characteristics to justify significance conclusions.	Pending

Requirement	Source	Finding	Gap	Action	Decision
4.6.2 Appropriate standards and guidance used?	4.6.2	Missing	Identification and citation of relevant environmental standards and guidelines used in the assessment; Explanation of how these standards guided the methodology and impact evaluation; Reference to regulatory or authority requirements that inform the assessment process; Demonstration of adherence to recognized EIA frameworks or protocols	Include explicit references to the environmental standards, guidelines, and regulatory requirements used to guide the assessment methodology and impact evaluation. Provide explanations of how these standards were applied to ensure the assessment's appropriateness and compliance.	Pending
4.6.3 Positive effects described as well as negative?	4.6.3	Needs Improvement	Explicit description of positive effects or benefits of the project; Balanced discussion of both positive and negative effects; Summary of positive residual effects after mitigation	Include explicit descriptions of positive effects and benefits of the project alongside the negative effects and mitigation measures to fully address the checklist item.	Pending
4.6.4 Significance of each effect clearly explained?	4.6.4	Needs Improvement	Clear explanation of the significance of each identified effect; Criteria or methodology used to determine significance; Summary of significance for each effect in plain language; Linkage between effects, mitigation measures, and residual significance; Explanation accessible to non-technical readers	Include a dedicated subsection that clearly explains the significance of each identified effect, the criteria used to assess significance, and a plain language summary of the residual significance after mitigation. Ensure this explanation is accessible to non-technical readers and linked to the mitigation measures described.	Pending
4.7.1 Methods used to predict effects described and justified?	4.7.1	Needs Improvement	Detailed description of methods used to predict effects; Justification for the choice of predictive methods; Explanation of modeling or analytical approaches; Discussion of assumptions and limitations of methods	Include a dedicated subsection that clearly describes the methods used to predict environmental effects, including any modeling or analytical tools, and provide justification for their selection. Discuss assumptions, limitations, and how these methods ensure reliable predictions.	Pending

Requirement	Source	Finding	Gap	Action	Decision
4.7.2 Worst-case predictions used where uncertain?	4.7.2	Missing	Explicit use of worst-case predictions or scenarios in the assessment methodology; Discussion on how uncertainty is handled in predictions; Evidence or examples of worst-case scenario modeling or analysis; Explanation of rationale for using worst-case predictions where uncertainty exists	Include a clear statement and explanation in the impact assessment methodology section that worst-case predictions are used where there is uncertainty, supported by examples or references to modeling approaches. This will strengthen the robustness and credibility of the assessment.	Pending
4.7.3 Difficulties in data compilation acknowledged?	4.7.3	Missing	Explicit acknowledgment of difficulties or limitations in data compilation; Discussion of data gaps or uncertainties encountered during assessment; Explanation of how data compilation challenges were addressed or mitigated	Include a dedicated subsection or statements within the impact assessment sections that explicitly acknowledge any difficulties or limitations encountered in data compilation, including data gaps, uncertainties, and how these were managed or mitigated to inform the assessment conclusions.	Pending
4.7.4 Level of treatment appropriate to importance?	4.7.4	Needs Improvement	Explicit explanation or demonstration of how the level of assessment treatment is matched to the importance or significance of effects; Evidence of prioritization or tiering of assessment effort based on effect magnitude or sensitivity; Clear rationale for the chosen level of detail in studies and mitigation measures relative to effect importance; Examples or references to assessment thresholds or criteria guiding treatment level	Include a dedicated subsection or statements explicitly describing how the assessment methodology and level of detail are tailored to the importance of each effect. Provide rationale or criteria used to determine assessment depth and mitigation effort proportional to effect significance.	Pending
4.7.5 Emphasis given to most severe effects?	4.7.5	Needs Improvement	Explicit identification and emphasis on the most severe or significant effects; Clear prioritization or ranking of effects by severity; Summary sections that highlight the most critical impacts distinctly from less severe ones	Include explicit statements and summaries that identify and emphasize the most severe effects, possibly with a ranking or prioritization to guide readers on the relative significance of impacts.	Pending

Requirement	Source	Finding	Gap	Action	Decision
5.1 Significant adverse effects and potential for mitigation discussed?	5.1	Needs Improvement	Project-specific identification of significant adverse effects; Detailed mitigation measures tailored to the identified adverse effects; Verification of applicable legal and regulatory requirements for Pakistan; Clear linkage between adverse effects and proposed mitigation; Evidence from project design, specialist studies, or consultations supporting mitigation effectiveness	Include a detailed, project-specific discussion of significant adverse effects and corresponding mitigation measures. Verify and document applicable local legal and regulatory requirements. Provide evidence from studies, design, and consultations to support mitigation commitments before finalizing the report.	Pending
5.2 Effect of mitigation on magnitude and significance explained?	5.2	Missing	Explanation of how mitigation measures reduce or alter the magnitude of impacts; Discussion on changes in impact significance due to mitigation; Quantitative or qualitative evidence supporting mitigation effectiveness; Clear linkage between identified impacts and mitigation outcomes	Include a dedicated subsection that explicitly explains the effect of each mitigation measure on the magnitude and significance of environmental and social impacts. Provide evidence or rationale supporting these effects to demonstrate mitigation effectiveness.	Pending
5.3 Reasons for choosing proposed mitigation explained?	5.3	Missing	Explanation of rationale for selecting each proposed mitigation measure; Discussion of alternatives considered and reasons for rejection; Linkage between identified impacts and chosen mitigation; Justification based on effectiveness, feasibility, or regulatory requirements	Include a dedicated subsection that clearly explains the reasons for selecting each proposed mitigation measure, including consideration of alternatives and justification based on impact reduction effectiveness and compliance requirements.	Pending
5.4 Full range of mitigation approaches considered (avoid, reduce, remedy, compensate, etc.)?	5.4	Needs Improvement	Explicit consideration and description of the full range of mitigation approaches (avoidance, reduction, remedy, compensation); Project-specific mitigation measures demonstrating application of the mitigation hierarchy; Evidence of evaluation or selection process for mitigation options; Clear linkage between identified impacts and corresponding mitigation strategies	Include a dedicated section explicitly detailing the full range of mitigation approaches considered, with project-specific examples and justification for chosen measures. Verify and align mitigation strategies with applicable jurisdictional requirements and client standards.	Pending

Requirement	Source	Finding	Gap	Action	Decision
5.5 Arrangements to monitor and manage residual impacts proposed?	5.5	Needs Improvement	Project-specific monitoring arrangements for residual impacts; Defined monitoring indicators, methods, and locations tailored to residual impacts; Clear responsibilities and resources allocated for monitoring residual impacts; Thresholds, frequency, reporting mechanisms, and response plans for residual impacts; Legal register and regulatory compliance specific to the project jurisdiction	Develop and include detailed, project-specific arrangements for monitoring and managing residual impacts, including indicators, methods, responsibilities, thresholds, reporting, and response plans. Confirm and document applicable legal and regulatory requirements relevant to the project location to ensure compliance.	Pending
5.6 Any negative effects of the proposed mitigation described?	5.6	Missing	Description of any negative effects or adverse impacts caused by the proposed mitigation measures; Assessment or evaluation of these negative effects; Discussion on how negative effects will be managed or minimized	Include a dedicated subsection or content that explicitly identifies and discusses any negative effects of the proposed mitigation measures, supported by evidence or specialist studies if available.	Pending
6.1 Does the EIA include a Non-Technical Summary?	6.1; ShipStation_V2_Inventory_API_Support_Summary.docx	Partially Compliant	Final design basis and footprint confirmation; Approved layout drawings and access routes; Quantified material, water, energy, waste, emission, and traffic estimates by phase; Project-specific values and finalized data	Verify and include finalized project-specific data and approved design documents in the Non-Technical Summary to fully address the checklist item.	Pending
6.2 Is it concise but comprehensive (project, environment, effects, mitigation)?	6.2	Partially Compliant	Project-specific quantitative data for materials, water, energy, waste, emissions, and traffic; Detailed description of environmental baseline conditions; Specific mitigation measures and their effectiveness; Clear summary of residual impacts after mitigation; Inclusion of approved layout drawings and access routes	Incorporate project-specific quantitative data and detailed mitigation measures to enhance comprehensiveness. Include approved layout drawings and a clear summary of residual impacts to fully address the checklist item.	Pending
6.3 Does it explain the development consent process and role of EIA?	6.3	Missing	Explanation of the development consent process; Description of the role and importance of the EIA in the consent process; Information on how the EIA influences decision-making and approvals	Include a clear, non-technical explanation of the development consent process and the role of the EIA within that process in the Non-Technical Summary section to meet checklist requirements.	Pending

Requirement	Source	Finding	Gap	Action	Decision
6.4 Does it provide an overview of the assessment approach?	6.4	Needs Improvement	Explicit description of the assessment approach; Methodologies used in the assessment; Criteria or standards applied; Steps or phases of the assessment process	Include a clear and concise overview of the assessment approach in the non-technical summary, detailing the methodologies, criteria, and process steps used to conduct the environmental and social impact assessment.	Pending
6.5 Is it written in non-technical language?	6.5	Partially Compliant	Simplified explanations avoiding technical jargon; Clear definitions or explanations of technical terms; Use of plain language suitable for general public understanding; Examples or analogies to aid comprehension	Revise the executive summary to replace technical terms with plain language and include explanations or analogies to improve accessibility for non-technical readers. Verify with target audience feedback to ensure clarity.	Pending
7.1 Relevant Kuwait regulations (KEPA, Ministry of Oil, etc.) provided?	7.1	Missing	Identification and listing of relevant Kuwait regulations applicable to the project; References to KEPA (Kuwait Environment Public Authority) regulations; References to Ministry of Oil regulations or other Kuwait authorities; Project-specific compliance requirements under Kuwait law; Evidence of permits, approvals, or compliance obligations specific to Kuwait	Include a dedicated section or content explicitly listing and describing the relevant Kuwait regulations applicable to the project, including KEPA and Ministry of Oil requirements. Provide evidence such as permits, approvals, or compliance documentation specific to Kuwait to fully address this checklist item.	Pending
7.2 Applicable environmental standards discussed (Noise, Air, Effluent, Waste, Soil, Biodiversity, etc.)?	7.2	Needs Improvement	Identification and discussion of specific applicable environmental standards for noise, air, effluent, waste, soil, biodiversity, etc.; Reference to national or local environmental standards or guidelines relevant to the project; Details on how these standards are integrated into the project assessment or compliance strategy.; Evidence of permits or approvals referencing these environmental standards.	Include a detailed section listing and discussing all applicable environmental standards relevant to the project, such as noise limits, air quality standards, effluent discharge criteria, waste management regulations, soil protection guidelines, and biodiversity conservation requirements. Provide references to national and local regulations, international standards if applicable, and demonstrate how the project complies with or plans to meet these standards.	Pending

Requirement	Source	Finding	Gap	Action	Decision
7.3 KOC HSE MS Policy, Vision & Mission clearly described?	7.3	Missing	Description of KOC HSE MS Policy; Description of KOC HSE MS Vision; Description of KOC HSE MS Mission; Explanation of how these elements guide project HSE management	Include a dedicated subsection that clearly describes the KOC HSE Management System Policy, Vision, and Mission statements. Provide context on how these elements integrate into the project's HSE management and compliance framework.	Pending
7.4 Applicable features of KOC EIA Procedure implemented?	7.4	Missing	Identification of applicable KOC EIA Procedure features relevant to the project; Demonstration or description of how these KOC EIA Procedure features have been implemented; Evidence such as permits, approvals, or compliance documentation referencing KOC EIA Procedure; Cross-references or compliance matrix entries linking project activities to KOC EIA Procedure requirements	Include a dedicated section explicitly identifying the applicable features of the KOC EIA Procedure and provide evidence of their implementation within the project. This should include references to permits, approvals, compliance documentation, and a compliance matrix demonstrating adherence to KOC EIA requirements.	Pending
7.5 Relevant HSE MS Procedures utilized or referenced?	7.5	Missing	Identification and description of relevant HSE MS procedures utilized or referenced; Explanation of how HSE MS procedures are integrated into project management and compliance; References or citations to specific HSE MS documents or standards applied to the project	Include a dedicated subsection or content explicitly detailing the relevant HSE MS procedures that are utilized or referenced for the project. This should include how these procedures align with regulatory requirements and project commitments, and provide references to the specific HSE MS documents or standards.	Pending
8.1 Information available in clearly defined document(s)?	8.1	Partially Compliant	Explicit confirmation that the EIA information is compiled into finalized, clearly defined document(s); Details on document formatting, indexing, and accessibility for reviewers; Evidence of document control measures such as versioning or approval status	Verify that the final EIA submission includes clearly defined, finalized documents with appropriate formatting, indexing, and document control to ensure clarity and accessibility for reviewers.	Pending

Requirement	Source	Finding	Gap	Action	Decision
8.2 Logically organized and clearly structured?	8.2	Partially Compliant	Project-specific values and data to replace placeholders and repeated text; Distinct content per section to avoid repetition; Completion of truncated sections; Clear transitions or summaries to guide the reader through the document structure	Revise the draft to include project-specific information and reduce repetitive text. Complete all sections fully and consider adding summaries or transitions to enhance logical flow and clarity.	Pending
8.3 Table of contents present?	8.3	Missing	Table of contents listing all major sections and subsections of the EIA document; Reference or inclusion of the table of contents in the draft document	Include a clearly structured table of contents at the beginning of the EIA document that lists all major sections and subsections with page numbers or links to facilitate navigation and review.	Pending
8.4 Clear description of process followed?	8.4	Needs Improvement	Explicit step-by-step description of the EIA process followed; Details on methodology and assessment approach; Information on stakeholder consultation and engagement process; Description of decision-making and review steps; Flow or timeline of the assessment activities	Include a dedicated section or subsection that clearly outlines the process followed in preparing the EIA, including methodology, stakeholder engagement, assessment steps, and decision-making framework to improve clarity and transparency.	Pending
8.5 Comprehensive but concise?	8.5	Partially Compliant	Explicit confirmation that the EIA is comprehensive yet concise overall; Project-specific finalized data and values to verify completeness; Summary or evaluation of presentation quality regarding conciseness and comprehensiveness; Evidence of editing or review to ensure no redundant or excessive information	Include a clear summary statement confirming that the EIA is comprehensive but concise, supported by finalized project-specific data. Conduct a review to ensure no unnecessary repetition or excessive detail, and document this in the presentation quality section.	Pending
8.6 Effective use of tables, figures, maps, photos?	8.6	Needs Improvement	Explicit inclusion of tables summarizing data; Figures illustrating key impacts or mitigation measures; Maps showing project location, footprint, and sensitive receptors; Photographs supporting baseline or impact descriptions; Demonstration of effective integration and explanation of visual aids within the text	Include and clearly reference tables, figures, maps, and photos within the EIA document. Ensure these visual aids are well-labeled, relevant, and effectively integrated to support the narrative and improve reader comprehension.	Pending

Requirement	Source	Finding	Gap	Action	Decision
8.7 Effective use of annexes/appendices?	8.7	Missing	Description or listing of annexes/appendices included in the EIA; Explanation of the purpose and content of annexes/appendices; Demonstration of how annexes/appendices support or clarify the main report; Evidence of organization, clarity, and accessibility of annexes/appendices	Include a dedicated section or references to annexes and appendices in the EIA report. Provide a clear list and description of annexes/appendices, demonstrating their relevance and effective use to support the main text.	Pending
8.8 All analyses and conclusions supported by evidence?	8.8	Needs Improvement	Specific analyses with data and results; Clear linkage of conclusions to supporting evidence; Final verified project-specific values and data; Explicit presentation of evidence supporting each conclusion; Documentation of assumptions and limitations related to analyses	Include detailed, project-specific analyses and clearly link all conclusions to supporting evidence such as survey data, specialist studies, and permits. Ensure that all data are verified and final, and document any assumptions or limitations to strengthen the support for conclusions.	Pending
8.9 Consistent terminology used?	8.9	Needs Improvement	Explicit statement or policy on consistent terminology use; Glossary or list of defined terms; Examples or evidence of consistent terminology application across sections; Review or quality control process for terminology consistency	Include a dedicated section or statement on consistent terminology use, provide a glossary of terms, and implement a review process to ensure terminology consistency throughout the EIA document.	Pending
8.10 Reads as a single document with good cross-referencing?	8.10	Needs Improvement	Explicit cross-referencing between sections; Hyperlinks or references to related sections; Consistent and non-repetitive content integration; Navigational aids such as a table of contents or index; Clear indicators that the document reads as a cohesive single document	Enhance the document by adding explicit cross-references between related sections, reduce repetitive content, and include navigational aids such as a table of contents or hyperlinks to improve the flow and integration of the document.	Pending

Requirement	Source	Finding	Gap	Action	Decision
8.11 Presentation fair, impartial, and objective?	8.11	Needs Improvement	Explicit statement or evidence that the presentation is fair, impartial, and objective; Discussion of measures to ensure unbiased reporting; Transparency about assumptions and limitations affecting objectivity; Inclusion of multiple viewpoints or stakeholder perspectives to support impartiality	Include a dedicated section or statements affirming that the EIA presentation is fair, impartial, and objective, supported by transparent methodology, balanced reporting, and acknowledgment of assumptions and limitations.	Pending
1.1.1 Are the need and objectives of the project explained?	1.1.1; ShipStation_V2_Inventory_API_Support_Summary.docx	Missing	Explicit explanation of the project's need; Clear statement of project objectives; Rationale for why the project is necessary; Contextual background supporting the need and objectives	Include a dedicated subsection clearly explaining the need for the project and its objectives, supported by relevant background information and rationale.	Retained

CONCLUSIONS & DECISION READINESS

Professional determination and controlled issue status

Overall score 1.89/10. Multiple checklist items remain missing, so the document is not yet review-ready.
