# EIA QUALITY REVIEW & DECISION READINESS REPORT

TIERS Limited EIA Document

Review run

ffd8a47e-6ef2-4f5d-8156-b620bbaa0cfe

AI-assisted • Professional determination required

## EXECUTIVE REVIEW SUMMARY

RQEIA quality, evidence and decision-readiness position

| QUALITY INDEX | COMPLIANT | PARTIAL | NEEDS WORK | MISSING |
|---------------|-----------|---------|------------|---------|
| 19%           | 0         | 7       | 23         | 92      |

Overall score 1.89/10. Multiple checklist items remain missing, so the document is not yet review-ready.

## RQEIA AREA ASSESSMENT

Detailed assessment across all eight methodology areas

### 1 DESCRIPTION OF THE PROJECT

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 0%       | 48        | 0         | 0       | 0          | 48      |

DESCRIPTION OF THE PROJECT has missing checklist coverage and requires substantive drafting before review sign-off.

### 2 CONSIDERATION OF ALTERNATIVES

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 39%      | 4         | 0         | 1       | 3          | 0       |

CONSIDERATION OF ALTERNATIVES is partially developed but still contains weak checklist responses.

### 3 DESCRIPTION OF THE ENVIRONMENT LIKELY TO BE AFFECTED

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 2%       | 20        | 0         | 0       | 1          | 19      |

DESCRIPTION OF THE ENVIRONMENT LIKELY TO BE AFFECTED has missing checklist coverage and requires substantive drafting before review sign-off.

### 4 DESCRIPTION OF THE LIKELY SIGNIFICANT EFFECTS

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 10%      | 23        | 0         | 0       | 8          | 15      |

DESCRIPTION OF THE LIKELY SIGNIFICANT EFFECTS has missing checklist coverage and requires substantive drafting before review sign-off.

### 5 DESCRIPTION OF MITIGATION

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 15%      | 6         | 0         | 0       | 3          | 3       |

DESCRIPTION OF MITIGATION has missing checklist coverage and requires substantive drafting before review sign-off.

### 6 NON-TECHNICAL SUMMARY

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 45%      | 5         | 0         | 3       | 1          | 1       |

NON-TECHNICAL SUMMARY has missing checklist coverage and requires substantive drafting before review sign-off.

## 7 REGULATORY FRAMEWORK

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 6%       | 5         | 0         | 0       | 1          | 4       |

REGULATORY FRAMEWORK has missing checklist coverage and requires substantive drafting before review sign-off.

## 8 QUALITY OF PRESENTATION

| Coverage | Questions | Compliant | Partial | Needs work | Missing |
|----------|-----------|-----------|---------|------------|---------|
| 34%      | 11        | 0         | 3       | 6          | 2       |

QUALITY OF PRESENTATION has missing checklist coverage and requires substantive drafting before review sign-off.

## DETAILED FINDINGS & EVIDENCE TRACEABILITY

Requirement → Evidence → Assessment → Finding → Recommended action → Reviewer decision

### 1.1.2 Is the programme for implementation described (timeline, start/finish dates for construction, operation, commissioning, including phases)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not include any description or details of the programme for implementation such as timeline, start/finish dates for construction, operation, commissioning, or phases.

**Assessment:** The draft content covers various aspects of project description including need, objectives, alternatives, components, construction, operation, inputs, outputs, and cumulative impacts. However, there is no specific information or narrative addressing the project implementation schedule or timeline. Without explicit mention of start and finish dates or phased implementation plans, the checklist item is not supported by the draft.

**Recommended action:** Include a dedicated subsection detailing the project implementation programme, specifying timelines, start and finish dates for construction, operation, commissioning, and any phased approach to the project.

Sources: 1.1.2

### 1.1.3 Are all main components of the project described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes general guidance and illustrative responses related to project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, and associated facilities. However, it does not contain any specific descriptions of the main components of the project itself.

**Assessment:** The draft sections focus on the structure and expected content for describing project components and related aspects but lack actual project-specific descriptions of the main components. Without concrete details or descriptions of the project's main components, the checklist item cannot be considered addressed.

**Recommended action:** Include detailed, project-specific descriptions of all main components, supported by design drawings, field surveys, permits, and specialist studies to fully address this checklist item.

Sources: 1.1.3

### 1.1.4 Is the location of each project component identified (maps, plans, diagrams)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections discuss project need, objectives, alternatives, and various aspects of project description such as components, layout, design, construction, operation, and cumulative impacts. However, none of the sections explicitly mention or provide maps, plans, or diagrams identifying the location of each project component. There is a general mention of project design drawings and coordinates needing confirmation, but no direct evidence that the location of each project component is identified with maps, plans, or diagrams.

**Assessment:** The draft content emphasizes the importance of project design drawings and coordinates but lacks explicit inclusion or reference to maps, plans, or diagrams that identify the location of each project component. Without such explicit evidence, it is not possible to confirm that this checklist item is addressed. The absence of direct mention or inclusion of location identification materials indicates a gap in the documentation for this specific requirement.

**Recommended action:** Include detailed maps, plans, or diagrams that clearly identify the location of each project component. Ensure these visuals are referenced in the project description sections and confirm that coordinates and spatial data are accurate and verified against approved design data.

Sources: 1.1.4; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.1.5 Is the layout of the site(s) described (ground levels, buildings, structures, underground works, storage, water features, planting, access, boundaries)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections focus on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, other developments, cumulative effects, greenhouse gas emissions, and climate risk. However, none of these sections explicitly describe the layout of the site(s) in terms of ground levels, buildings, structures, underground works, storage, water features, planting, access, or boundaries.

**Assessment:** The draft content does not contain specific descriptions or details about the physical layout of the project site(s). There is no mention of ground levels, buildings, structures, underground works, storage areas, water features, planting schemes, access routes, or site boundaries. Without these details, the checklist item 1.1.5 is not addressed. The draft mainly outlines the scope and structure for project description and assessment but lacks the actual descriptive content required for this item.

**Recommended action:** Include a detailed description of the site layout covering ground levels, buildings, structures, underground works, storage, water features, planting, access, and boundaries. Provide supporting project design drawings and field survey records to substantiate the description.

Sources: 1.1.5

### 1.1.6 For tunneling and earthworks - are activities properly described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any description or details about tunneling or earthworks activities. There is no information on the nature, methods, extent, or specifics of tunneling or earthworks in the project description or any other section.

**Assessment:** The evaluation of whether tunneling and earthworks activities are properly described requires explicit details about these activities in the project description. The supplied content focuses on general project description structure, alternatives assessment, and quality assurance but lacks any mention or description of tunneling or earthworks. Therefore, the checklist item is not addressed at all in the provided content.

**Recommended action:** Include a dedicated subsection in the project description detailing tunneling and earthworks activities. Provide technical descriptions, drawings, and schedules to fully address this checklist item.

Sources: 1.1.6; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.1.7 Are all construction activities described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft includes sections on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, and associated facilities. However, there is no specific description or detailed information about all construction activities.

**Assessment:** The draft outlines the general structure and types of information to include in the project description, but it lacks explicit details or descriptions of the construction activities themselves. Without such details, it is not possible to confirm that all construction activities are described as required by the checklist item.

**Recommended action:** Include a comprehensive description of all construction activities, covering phases, methods, equipment, and scheduling to fully address the checklist item.

Sources: 1.1.7

### 1.1.8 Are all operation activities described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft includes sections on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, and associated facilities. However, there is no specific description or detailed information about all operation activities of the project.

**Assessment:** The draft outlines the general structure and information to include in the project description but does not provide explicit details or descriptions of all operational activities. Without such details, it is not possible to confirm that all operation activities are described. The absence of routed source chunks or linked source notes further limits the ability to verify this checklist item.

**Recommended action:** Include a comprehensive description of all operation activities, covering procedures, schedules, equipment used, and workforce roles during the operation phase to fully address this checklist item.

Sources: 1.1.8

### 1.1.10 Are additional services required described (transport, water, sewerage, waste, electricity, telecoms, roads, harbors, power-lines, etc.)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information describing additional services required for the project such as transport, water, sewerage, waste, electricity, telecoms, roads, harbors, or power-lines.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, inputs/outputs, workforce, cumulative impacts, and climate considerations. However, it lacks any explicit description or assessment of additional services infrastructure or requirements associated with the project. This is a critical omission for a comprehensive project description in an EIA.

**Recommended action:** Include a dedicated subsection in the project description that details all additional services required for the project, their current status, planned upgrades or new infrastructure, and associated environmental and social considerations.

Sources: 1.1.10

### 1.1.11 Are any developments likely to occur as a consequence of the project identified?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections focus on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, and climate-related issues. However, there is no explicit mention or discussion of developments likely to occur as a consequence of the project.

**Assessment:** The draft content does not address or identify any secondary or induced developments that might arise as a consequence of the project. There is no analysis or evidence regarding potential follow-on developments, land use changes, or economic activities triggered by the project. This is a key aspect of cumulative impact assessment and should be included to fully address the checklist item.

**Recommended action:** Include a dedicated subsection that identifies and assesses any developments likely to occur as a consequence of the project, supported by evidence such as planning documents, consultation records, or specialist studies. This should be integrated within the cumulative impacts or project description sections.

Sources: 1.1.11

### 1.1.12 Are existing activities which will alter or cease identified?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft and routed source chunks do not contain any information or discussion about existing activities which will alter or cease due to the project.

**Assessment:** The draft sections focus on project need, objectives, alternatives, components, construction, inputs/outputs, workforce, cumulative impacts, and climate considerations. However, there is no mention or identification of existing activities that will be altered or cease as a result of the project. This is a critical element for understanding project impacts and is absent from the provided content.

**Recommended action:** Include a dedicated subsection in the project description that explicitly identifies existing activities on the project site or in the vicinity that will be altered or cease due to the project. Provide supporting evidence such as field surveys, stakeholder consultations, or permits to substantiate these changes.

Sources: 1.1.12

### 1.1.13 Are other existing or planned developments with potential cumulative effects identified?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information or discussion regarding identification of other existing or planned developments with potential cumulative effects. There is no mention of cumulative effects assessment or listing of other developments in the project description or cumulative impacts sections.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, inputs, workforce, and general cumulative impacts sections. However, it lacks specific identification or analysis of other developments that could contribute to cumulative effects. Without this, the checklist item about identifying other developments with potential cumulative effects is not addressed.

**Recommended action:** Include a dedicated subsection or table listing other existing and planned developments in the project area that may contribute to cumulative effects. Provide analysis or discussion of their potential combined impacts with the project.

Sources: 1.1.13

### 1.2.1 Is the area of land occupied by permanent components quantified and shown on scaled maps?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not include any specific information quantifying the area of land occupied by permanent project components, nor do they mention scaled maps showing this information.

**Assessment:** The draft content focuses on general guidance for project description, alternatives assessment, and evidence requirements but lacks explicit details or data on the quantification of land area occupied by permanent components or the inclusion of scaled maps illustrating this. Without such specifics, the checklist item is not addressed.

**Recommended action:** Include detailed quantification of the land area occupied by permanent project components and provide scaled maps illustrating this information in the project description section.

Sources: 1.2.1

### 1.3.1 Is the area of land required temporarily for construction quantified and mapped?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information quantifying or mapping the area of land required temporarily for construction. There is no mention of land area measurements, temporary land use, or mapping related to construction activities.

**Assessment:** The evaluation of the checklist item requires specific evidence that the temporary land area needed for construction is quantified and mapped. The supplied content focuses on general project description, alternatives

assessment, and API support for inventory management, none of which address the spatial quantification or mapping of temporary construction land use. Therefore, the checklist item is not supported by the provided content.

**Recommended action:** Include detailed project design drawings or maps that specify the temporary land area required for construction, along with quantified measurements. This should be supported by field survey records or specialist studies to fully address the checklist item.

**Sources:** 1.3.1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.3.2 Is restoration and after-use of temporarily occupied land described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 2.5, 9.1, 9.2, 10.1, 10.2) do not contain any information or discussion regarding restoration and after-use of temporarily occupied land.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, greenhouse gas emissions, and climate resilience. However, there is no mention or description of restoration plans or after-use strategies for land temporarily occupied during the project. This is a critical aspect of environmental management and should be explicitly addressed in the EIA to ensure land is returned to a suitable condition post-construction or use.

**Recommended action:** Include a dedicated subsection in the project description or construction/decommissioning sections that details the restoration and after-use plans for temporarily occupied land. This should cover methods, timelines, responsible parties, and monitoring to ensure land is returned to an acceptable condition.

**Sources:** 1.3.2

### 1.3.4 Is the size of structures/works identified (floor area, height, excavations, embankments, stacks, water depth, etc.)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any specific information about the size of structures or works such as floor area, height, excavations, embankments, stacks, or water depth. The text mainly discusses assessment responses, demonstration scope, information to include, evidence and limitations, and section contexts, but lacks concrete project-specific data or descriptions related to structural dimensions.

**Assessment:** The draft content focuses on general guidance for project description and assessment but does not provide any details or data on the physical dimensions or sizes of project components. Without explicit mention or data on sizes of structures or works, the checklist item cannot be considered addressed.

**Recommended action:** Include detailed descriptions and quantitative data on the size of all relevant structures and works in the project description section, supported by design drawings or technical specifications.

**Sources:** 1.3.4

### 1.6.3 Locations for final disposal of solid wastes discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information or discussion regarding locations for final disposal of solid wastes. There is no mention of waste disposal sites, methods, or plans for final solid waste management.

**Assessment:** The draft content focuses on project need, objectives, location, components, construction, operation, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, and climate considerations. However, it lacks any specific details or discussion about the final disposal locations for solid wastes generated by the project. This is a critical aspect of waste management that should be explicitly addressed in the

EIA to ensure environmental impacts are properly assessed and mitigated.

**Recommended action:** Include a dedicated subsection in the project description or waste management section that clearly identifies and discusses the locations for final disposal of solid wastes, supported by relevant studies, permits, and assessments.

Sources: 1.6.3

### 1.3.5 Is the form and appearance of structures described (materials, colors, design, plant species, etc.)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any description of the form and appearance of structures, including materials, colors, design, or plant species. The content focuses on project need, objectives, location, components, layout, design alternatives, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, and climate-related issues, but lacks specific details on structural aesthetics or landscaping.

**Assessment:** The draft sections reviewed do not address the checklist item 1.3.5 regarding the form and appearance of structures. There is no mention of materials, colors, design elements, or plant species used in the project. This information is essential to assess visual impacts and integration with the environment, which is a key aspect of the EIA. Without this, the assessment is incomplete for this item.

**Recommended action:** Include a detailed description of the form and appearance of all project structures, specifying materials, colors, design features, and landscaping plant species to fully address this checklist item.

Sources: 1.3.5

### 1.3.6 For urban projects - numbers and characteristics of new populations/businesses described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information regarding the numbers and characteristics of new populations or businesses for urban projects. There is no mention or data describing new populations or business characteristics in the project description or any other sections.

**Assessment:** The evaluation of checklist item 1.3.6 requires specific details about the numbers and characteristics of new populations and businesses resulting from the urban project. The supplied content focuses on general project description elements such as project need, objectives, alternatives, construction, operation, and cumulative impacts, but lacks any demographic or business-related data. Therefore, the checklist item is not addressed in the provided content.

**Recommended action:** Include a detailed section in the project description that quantifies and characterizes the new populations and businesses expected as a result of the urban project. This should include demographic data, business types, sizes, and any relevant socio-economic characteristics to fully address the checklist item.

Sources: 1.3.6; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.3.7 For displacement projects - numbers and characteristics of displaced people/businesses described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information regarding displacement of people or businesses, nor do they describe numbers or characteristics of displaced entities.

**Assessment:** The draft content focuses on project need, objectives, alternatives, design, construction, operation, emissions, workforce, cumulative impacts, and climate considerations. There is no mention of displacement impacts or social assessments related to displaced people or businesses. Therefore, the checklist item about displacement is not

addressed in the supplied content.

**Recommended action:** Include a dedicated subsection in the project description or social impact assessment that details the numbers and characteristics of displaced people and businesses, supported by field surveys, consultation records, and specialist studies.

Sources: 1.3.7; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.3.8 For transport projects - type, volume, temporal pattern, and distribution of traffic described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the type, volume, temporal pattern, or distribution of traffic for the transport project. There is no mention or description of traffic characteristics in any of the sections provided.

**Assessment:** The draft content focuses on general project description elements such as project need, objectives, alternatives, components, construction, operation, inputs/outputs, workforce, cumulative impacts, and climate considerations. However, it lacks any specific details or data related to traffic for transport projects, which is essential to address checklist item 1.3.8. Without this information, the EIA cannot assess traffic-related impacts adequately.

**Recommended action:** Include a dedicated subsection in the project description that details the type, volume, temporal pattern, and distribution of traffic associated with the transport project. This should be supported by traffic studies, surveys, or modeling data to fully address the checklist item.

Sources: 1.3.8

### 1.4.1 Are all operating processes described (manufacturing, extraction, etc.)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes sections on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, and associated facilities. However, there is no specific description or detailed information about the operating processes such as manufacturing or extraction processes.

**Assessment:** The draft does not contain any explicit description of the operating processes involved in the project. While it covers various aspects of project description and alternatives assessment, it lacks the necessary details on how the project will operate, including manufacturing or extraction steps, which are critical for understanding environmental impacts.

**Recommended action:** Include a comprehensive description of all operating processes involved in the project, detailing manufacturing, extraction, or other relevant operational activities. Provide process flow diagrams or stepwise explanations to clarify the operations for environmental impact assessment.

Sources: 1.4.1

### 1.4.2 Are types and quantities of outputs described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any specific information describing the types and quantities of outputs of the project. The sections focus on project need, objectives, alternatives, components, construction, operation, decommissioning, inputs, emissions, waste, resources, and other related topics, but none explicitly describe the outputs in terms of types and quantities.

**Assessment:** The draft content includes general guidance and illustrative responses for various project description aspects but lacks concrete data or descriptions about the outputs produced by the project. Without explicit mention or data on output types and quantities, the checklist item cannot be considered addressed. This is a critical omission as understanding outputs is essential for impact assessment and mitigation planning.

**Recommended action:** Include a dedicated subsection detailing the types and quantities of outputs generated by the project, supported by design data, calculations, or specialist studies to enable thorough impact assessment.

Sources: 1.4.2

### 1.4.3 Are types and quantities of raw materials and energy needed discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any specific information or discussion about the types and quantities of raw materials and energy needed for the project. The sections focus on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, and climate-related issues, but none explicitly address raw material and energy requirements.

**Assessment:** The draft content lacks explicit mention or detailed discussion of the types and quantities of raw materials and energy required for the project. While section 2.4 mentions inputs, outputs, emissions, waste, and resources, it only provides a general illustrative response framework without project-specific data or descriptions. Therefore, the checklist item 1.4.3 is not supported by the current draft content.

**Recommended action:** Include a dedicated subsection or detailed content within section 2.4 or a related section that explicitly identifies and quantifies the raw materials and energy inputs required for the project. Provide supporting data, calculations, and references to design documents or supplier information to substantiate the quantities and types discussed.

Sources: 1.4.3

### 1.4.4 Are environmental implications of sourcing raw materials discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 2.5, 9.1, 9.2, 10.1, 10.2) do not contain any discussion or information regarding the environmental implications of sourcing raw materials for the project.

**Assessment:** The draft focuses on project need, objectives, location, components, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, cumulative impacts, and climate-related issues. However, there is no explicit mention or analysis of the environmental impacts associated with sourcing raw materials, such as extraction impacts, supply chain considerations, or sustainability of raw material procurement. This is a critical aspect of environmental assessment that appears to be unaddressed in the current draft.

**Recommended action:** Include a dedicated subsection in the project description or inputs/resources section that explicitly addresses the environmental implications of sourcing raw materials. This should cover extraction impacts, supply chain sustainability, alternatives considered, and mitigation measures. Supporting evidence such as specialist studies or supplier information should be incorporated.

Sources: 1.4.4

### 1.4.5 Is efficiency in use of energy and raw materials discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any discussion or information specifically addressing efficiency in the use of energy and raw materials. The sections focus on project need, objectives, location, components, layout, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, and other related topics, but none explicitly mention energy or raw material efficiency.

**Assessment:** The draft content lacks any explicit mention or analysis of energy efficiency or raw material efficiency in the project description or alternatives assessment. Without such information, it is not possible to confirm that the EIA adequately discusses efficiency in the use of energy and raw materials as required by checklist item 1.4.5.

**Recommended action:** Include a dedicated section or subsection that explicitly addresses efficiency in the use of energy and raw materials. This should cover design choices, operational practices, and alternatives assessment criteria related to resource efficiency.

Sources: 1.4.5

### 1.5.1 Are hazardous materials identified and quantified (construction, operation, commissioning)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the identification or quantification of hazardous materials during construction, operation, or commissioning phases of the project.

**Assessment:** The draft content focuses on project need, objectives, alternatives assessment, project components, construction, operation, inputs, outputs, emissions, waste, workforce, cumulative impacts, and climate-related issues. However, there is no mention or discussion of hazardous materials, their identification, or quantification in any phase of the project. This is a critical omission for the checklist item 1.5.1, which specifically requires hazardous materials to be identified and quantified.

**Recommended action:** Include a dedicated subsection in the project description or inputs/outputs section that explicitly identifies and quantifies hazardous materials associated with all project phases. Provide supporting evidence such as safety studies, inventories, and compliance documentation.

Sources: 1.5.1

### 1.5.2 Is transport of raw materials and traffic movements discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 2.5, 9.1, 9.2, 10.1, 10.2) do not contain any discussion or mention of transport of raw materials or traffic movements related to the project. There is no information on transport logistics, traffic impact assessments, routes, volumes, or mitigation measures for traffic.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, operation, inputs/outputs, workforce, cumulative impacts, and climate considerations. However, it lacks any specific discussion or analysis of transport of raw materials or traffic movements, which is a critical aspect of project description and environmental impact assessment. Without this information, the EIA cannot fully assess potential traffic-related impacts or mitigation.

**Recommended action:** Include a dedicated subsection in the project description addressing transport of raw materials and traffic movements. Provide detailed information on transport logistics, traffic volumes, routes, timing, and potential impacts. Conduct and include traffic impact assessments and propose mitigation measures to manage traffic-related effects.

Sources: 1.5.2

### 1.5.3 Is employment created or lost discussed (by phase)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 2.5, 9.1, 9.2, 10.1, 10.2) do not contain any information or discussion regarding employment creation or loss by project phase (construction, operation, decommissioning).

**Assessment:** The draft focuses on project need, objectives, alternatives, components, layout, design, inputs, outputs, emissions, waste, resources, programme, workforce, associated facilities, cumulative impacts, and climate-related issues. However, none of these sections explicitly address employment impacts, such as jobs created or lost during different project phases. Employment effects are a critical social impact and should be discussed explicitly in the EIA to understand socio-economic implications.

**Recommended action:** Include a dedicated subsection within the project description or social impact assessment that details employment impacts by phase, supported by workforce estimates and analysis of local socio-economic effects.

Sources: 1.5.3

#### 1.5.4 Are access arrangements and worker/visitor traffic movements estimated?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information regarding access arrangements or estimates of worker/visitor traffic movements for the project.

**Assessment:** The evaluation of access arrangements and worker/visitor traffic movements is not addressed in any of the provided content. The structured draft focuses on project need, objectives, alternatives, components, construction, inputs/outputs, workforce, cumulative impacts, and climate considerations, but does not mention traffic or access logistics. The routed source chunk is unrelated to the checklist item, discussing API support contacts.

**Recommended action:** Include a dedicated subsection in the project description that details access arrangements and provides estimates of worker and visitor traffic movements. Support this with traffic studies, site layout plans, and any relevant consultation or permits related to traffic management.

Sources: 1.5.4; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

#### 1.5.5 Is housing and services for employees discussed (if relevant)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 10.2) do not contain any information or discussion regarding housing and services for employees. There is no mention of employee accommodation, related facilities, or services in any of the project description or associated sections.

**Assessment:** The evaluation of the checklist item 'Is housing and services for employees discussed (if relevant)?' requires explicit information about employee housing and services within the project documentation. The supplied draft content focuses on project need, components, construction, inputs/outputs, workforce, cumulative impacts, and climate considerations but lacks any reference to employee housing or services. Therefore, the checklist item is not addressed in the provided content.

**Recommended action:** Include a dedicated subsection in the project description or workforce section that details housing and services for employees, if relevant to the project. This should cover the type, location, capacity, and management of employee accommodation and associated services, along with any environmental or social impacts and mitigation measures.

Sources: 1.5.5; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

#### 1.5.6 Are types and quantities of solid waste identified (by phase)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the types and quantities of solid waste generated by the project during any phase. There is no mention or data related to solid waste identification, classification, or quantification in construction, operation, or decommissioning phases.

**Assessment:** The draft content focuses on project need, objectives, alternatives, design, inputs, outputs, emissions, waste, resources, and other environmental aspects but lacks specific details on solid waste types and quantities by phase. Without explicit data or descriptions, the checklist item about solid waste identification remains unaddressed.

**Recommended action:** Include a detailed section specifying the types and quantities of solid waste expected to be generated during each project phase, supported by waste inventories or calculations. This should be integrated into the project description or waste management sections to fully address the checklist item.

Sources: 1.5.6

### 1.6.1 Composition and hazards of solid wastes discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the composition and hazards of solid wastes related to the project. There is no discussion or data on solid waste types, quantities, hazardous characteristics, or management measures.

**Assessment:** The draft focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions, waste, resources, and other environmental aspects, but lacks specific details on solid waste composition and hazards. Without explicit mention or analysis of solid waste characteristics, the checklist item is not addressed.

**Recommended action:** Include a dedicated subsection detailing the composition and hazards of solid wastes generated by the project, supported by waste inventories, safety studies, and licensed contractor records as applicable.

Sources: 1.6.1

### 1.6.2 Methods for collecting, storing, treating, transporting, and disposing of solid wastes described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information or description regarding methods for collecting, storing, treating, transporting, or disposing of solid wastes. There is no mention of waste management procedures or plans in the project description or related sections.

**Assessment:** The draft focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions, waste, resources, and cumulative impacts, but it lacks specific details on solid waste management methods. Without explicit information on how solid wastes will be handled, the checklist item cannot be considered addressed.

**Recommended action:** Include a dedicated subsection detailing the procedures and technologies for solid waste management throughout the project lifecycle, covering collection, storage, treatment, transportation, and disposal methods, supported by relevant permits and contractor information.

Sources: 1.6.2

### 1.6.4 Types and quantities of liquid effluents identified (by phase)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the types and quantities of liquid effluents generated by the project during any phase (construction, operation, or decommissioning). There is no mention or data on liquid effluent identification, characterization, or quantification.

**Assessment:** The draft content focuses on general project description elements such as project need, objectives, alternatives assessment, project components, construction and operation, inputs and outputs broadly, and cumulative impacts. However, it lacks specific details on liquid effluents, which are critical for assessing potential water pollution and environmental impacts. Without this information, the EIA cannot adequately evaluate effluent-related risks or mitigation measures.

**Recommended action:** Include a dedicated subsection detailing the types and quantities of liquid effluents expected from the project during each phase. Provide quantitative data supported by calculations or specialist studies. This information is essential for impact assessment and designing appropriate mitigation measures.

Sources: 1.6.4

### 1.6.5 Composition and hazards of liquid effluents discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the composition and hazards of liquid effluents. There is no discussion or data presented about liquid effluent characteristics, their chemical or physical composition, or associated hazards.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions, waste, workforce, cumulative impacts, and climate-related issues. However, it lacks any specific mention or analysis of liquid effluents, their composition, or hazards. This is a critical omission for environmental impact assessment, as liquid effluents can significantly affect water quality and ecosystem health. Without this information, the EIA cannot adequately assess potential pollution risks or necessary mitigation measures related to liquid effluents.

**Recommended action:** Include a dedicated subsection detailing the composition and hazards of liquid effluents expected from the project. Provide chemical analyses, hazard identification, and proposed management or treatment measures to address potential impacts.

Sources: 1.6.5

### 1.6.6 Methods for collecting, storing, treating, transporting, and disposing of liquid effluents described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding methods for collecting, storing, treating, transporting, or disposing of liquid effluents. There is no mention of liquid effluent management in any of the sections or subsections provided.

**Assessment:** The draft content focuses on project need, objectives, alternatives assessment, project components, construction, operation, inputs and outputs, workforce, cumulative impacts, and climate-related issues. However, it lacks any specific description or discussion of liquid effluent management methods, which is critical for addressing environmental impacts related to liquid waste. Without this information, the EIA cannot demonstrate how liquid effluents will be handled to prevent pollution or comply with regulatory requirements.

**Recommended action:** Include a dedicated subsection detailing the methods for collecting, storing, treating, transporting, and disposing of liquid effluents. Provide supporting evidence such as design drawings, treatment technology descriptions, permits, and compliance with relevant environmental standards.

Sources: 1.6.6

### 1.6.7 Locations for final disposal of liquid effluents discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information or discussion regarding the locations for final disposal of liquid effluents.

**Assessment:** The draft content focuses on project need, objectives, location, components, construction, operation, inputs, outputs, emissions, waste, programme, workforce, associated facilities, cumulative impacts, and climate-related issues. However, there is no mention or discussion about the final disposal locations for liquid effluents, which is critical for assessing environmental impacts related to liquid waste management.

**Recommended action:** Include a dedicated subsection detailing the locations for final disposal of liquid effluents, supported by design drawings, permits, and specialist studies. Assess environmental impacts and compliance with regulations, and describe mitigation measures to address potential risks.

Sources: 1.6.7

### 1.6.8 Types and quantities of gaseous and particulate emissions identified (by phase)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the types and quantities of gaseous and particulate emissions identified by phase for the project. There is no mention of emissions data, calculations, or descriptions related to construction, operation, or decommissioning phases.

**Assessment:** The draft content focuses on project need, objectives, alternatives, design, inputs/outputs, workforce, cumulative impacts, and climate-related issues but lacks specific details on gaseous and particulate emissions. Without explicit emissions data or analysis, the checklist item 1.6.8 is not addressed.

**Recommended action:** Include detailed emissions inventories and calculations for gaseous and particulate emissions for each project phase (construction, operation, decommissioning). Provide specialist studies or monitoring plans that quantify these emissions to fully address the checklist item.

Sources: 1.6.8

### 1.6.9 Composition and hazards of air emissions discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the composition and hazards of air emissions from the project. There is no discussion or data on air emission types, quantities, or associated hazards.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions in general, and other environmental aspects, but lacks specific details on air emissions composition and hazards. Without explicit mention or analysis of air emissions composition and hazards, this checklist item is not addressed.

**Recommended action:** Include a dedicated subsection detailing the types and quantities of air emissions expected from the project, their hazardous properties, potential impacts, and proposed mitigation measures.

Sources: 1.6.9

### 1.6.10 Methods for collecting, treating, and discharging air emissions described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information regarding methods for collecting, treating, and discharging air emissions related to the project.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions in general, and cumulative impacts, but does not specifically describe methods for air emissions management. There is no mention of air emission collection, treatment technologies, or discharge procedures. Without such details, the checklist item cannot be considered addressed.

**Recommended action:** Include a dedicated subsection detailing the methods for collecting, treating, and discharging air emissions, supported by design drawings, permits, and specialist studies as applicable.

Sources: 1.6.10; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.6.11 Locations and characteristics of air discharges identified (stack height, velocity, temperature)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding the locations and characteristics of air discharges such as stack height, velocity, or temperature. There is no mention of air emission points or their parameters in the project description or related sections.

**Assessment:** The draft focuses on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions in general, workforce, cumulative impacts, and climate considerations. However, it lacks specific details about air discharge locations and characteristics, which are critical for assessing air quality impacts. Without this information, the EIA cannot adequately evaluate potential air pollution or design appropriate mitigation measures.

**Recommended action:** Include detailed descriptions and specifications of all air discharge points, including stack height, velocity, and temperature, supported by design drawings and emission data to fully address this checklist item.

Sources: 1.6.11

### 1.6.12 Potential for resource recovery from wastes discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any discussion or mention of potential for resource recovery from wastes. There is no information on waste management strategies, recycling, reuse, or recovery options.

**Assessment:** The draft sections focus on project need, objectives, alternatives, components, construction, operation, inputs, outputs, emissions, waste, resources, and cumulative impacts, but none explicitly address resource recovery potential from wastes. Without explicit mention or analysis of resource recovery, this checklist item is not addressed.

**Recommended action:** Include a dedicated subsection in the EIA report that evaluates the potential for resource recovery from wastes generated by the project, supported by waste inventories and recovery feasibility studies.

Sources: 1.6.12

### 1.6.13 Sources of noise, heat, light, or electromagnetic radiation identified and quantified?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 10.2) do not contain any information or data related to identification or quantification of sources of noise, heat, light, or electromagnetic radiation associated with the project.

**Assessment:** The draft focuses on project need, objectives, alternatives, components, construction, emissions, cumulative impacts, and climate considerations but lacks any mention or assessment of noise, heat, light, or electromagnetic radiation sources. There is no specialist study, measurement, or quantification presented for these environmental factors, which are critical for a comprehensive environmental impact assessment.

**Recommended action:** Include a dedicated section or subsection that identifies and quantifies sources of noise, heat, light, and electromagnetic radiation from the project during construction, operation, and decommissioning phases. Incorporate specialist studies or measurements and compare results with relevant standards or guidelines. Document mitigation measures to address potential impacts.

Sources: 1.6.13

### 1.6.14 Methods for estimating residues/emissions and difficulties discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information regarding methods for estimating residues or emissions, nor do they discuss any difficulties associated with these methods.

**Assessment:** The draft content focuses on project need, objectives, alternatives, design, construction, operation, decommissioning, inputs, outputs, emissions, waste, resources, and cumulative impacts, but lacks specific details on the methodologies used to estimate residues or emissions. There is also no discussion of challenges or uncertainties in these estimation methods. Without such information, the checklist item cannot be considered addressed.

**Recommended action:** Include a detailed description of the methods used to estimate residues and emissions, along with a discussion of any difficulties or uncertainties encountered in these estimations. Provide supporting data, calculations, or references to specialist studies to substantiate the methods.

Sources: 1.6.14; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 1.6.15 Uncertainty attached to estimates discussed?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any discussion or mention of uncertainty attached to estimates related to the project description or any other aspect.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, construction, inputs/outputs, programme, cumulative impacts, and climate considerations, but does not address uncertainty in estimates. There is no evidence of quantitative or qualitative discussion of uncertainty, error margins, confidence intervals, or sensitivity analysis in the estimates presented.

**Recommended action:** Include a dedicated subsection discussing the uncertainty attached to key estimates in the project description and impact assessments. This should cover the nature and sources of uncertainty, methods used to quantify or qualify it, and implications for decision-making and risk management.

Sources: 1.6.15

### 1.7.1 Are risks associated with the project discussed (hazardous materials, spills, fire, explosion, traffic, process failure, natural disasters)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (2.1 to 2.5, 9.1, 9.2, 10.1, 10.2) do not contain any discussion or mention of risks associated with the project such as hazardous materials, spills, fire, explosion, traffic, process failure, or natural disasters.

**Assessment:** The draft content focuses on project need, objectives, alternatives, components, inputs/outputs, workforce, cumulative impacts, and climate-related issues. However, it lacks any explicit assessment or discussion of project-related risks including hazardous materials, spills, fire, explosion, traffic, process failure, or natural disasters. These risk factors are critical for a comprehensive environmental impact assessment and should be explicitly addressed with evidence such as safety studies, risk assessments, or mitigation plans.

**Recommended action:** Include a dedicated section or subsection that explicitly discusses all relevant project risks including hazardous materials, spills, fire, explosion, traffic, process failure, and natural disasters. Provide supporting evidence such as safety studies, risk assessments, and proposed mitigation measures to fully address this checklist item.

Sources: 1.7.1

### 1.7.2 Are measures to prevent and respond to accidents described (prevention, training, contingency, emergency plans)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections do not contain any information regarding measures to prevent and respond to accidents, including prevention, training, contingency, or emergency plans.

**Assessment:** The draft content focuses on project description, alternatives assessment, environmental and social criteria, and quality assurance processes. There is no mention or description of accident prevention measures, training programs, contingency plans, or emergency response strategies. These elements are essential for addressing the checklist item but are absent in the provided content.

**Recommended action:** Include a dedicated subsection detailing accident prevention measures, training protocols, contingency planning, and emergency response plans to fully address this checklist item.

Sources: 1.7.2

## 2.1 Is the process by which the project was developed described, and are alternatives considered?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The draft sections 4.1, 4.2, and 4.3 provide illustrative responses and guidance on assessing no-project alternatives, site/design/technology/process alternatives, and comparison/selection of preferred alternatives. They outline the expected structure, types of effects to consider, and information to include such as impact registers and assessment criteria. However, the content is demonstrative and lacks project-specific descriptions of the process by which the project was developed or actual alternatives considered.

**Assessment:** The draft provides a framework for addressing alternatives but does not contain actual descriptions or evidence of the project's development process or the alternatives considered. It lacks concrete details on how alternatives were identified, evaluated, or selected. Without project-specific information, the checklist item is only weakly addressed, as the requirement is to describe the process and alternatives, not just the assessment methodology.

**Recommended action:** Include a detailed narrative describing the project development process and the specific alternatives considered, supported by evidence such as design documents and consultation records. Provide a comparative analysis of alternatives and rationale for the preferred option to fully address the checklist item.

Sources: 2.1

## 2.2 Are the alternatives realistic and genuine?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The draft provides illustrative responses for no-project, site, design, technology, and process alternatives, emphasizing assessment structure and potential effects. However, it lacks specific details or examples demonstrating that the alternatives considered are realistic and genuine for the project in question.

**Assessment:** While the draft outlines the expected structure and assessment criteria for alternatives, it does not present concrete evidence or project-specific analysis to confirm that the alternatives are realistic and genuine. The absence of detailed descriptions, feasibility assessments, or justification for the alternatives weakens the evaluation of this checklist item.

**Recommended action:** Include detailed, project-specific descriptions and feasibility assessments of each alternative to demonstrate their realism and genuineness. Provide justification and comparative analysis to support the selection of alternatives.

Sources: 2.2

## 2.3 Are the main reasons for choice of the proposed project explained (including environmental reasons)?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft provides illustrative responses for alternatives assessment sections including no-project alternative, site/design/technology/process alternatives, and comparison and selection of preferred alternative. However, it lacks explicit explanation of the main reasons for choosing the proposed project, particularly including environmental reasons. The draft focuses on assessment methodology and information to include but does not present actual reasons or justification for the preferred project choice.

**Assessment:** The draft outlines the framework for assessing alternatives and suggests including impact registers and evidence but does not contain substantive content explaining why the proposed project was selected over alternatives. Environmental reasons for the choice are not explicitly discussed, making the response insufficient to fully address the checklist item 2.3.

**Recommended action:** Include a clear narrative explaining the main reasons for selecting the proposed project, emphasizing environmental considerations and how alternatives were comparatively evaluated leading to the preferred

choice.

Sources: 2.3

## 2.4 Are the main environmental effects of the alternatives compared with the proposed project?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 90%        | Pending           |

**Evidence:** The draft sections 4.1, 4.2, and 4.3 provide a structured approach to assessing alternatives including no-project, site/design/technology/process alternatives, and comparison/selection of preferred alternatives. Each section emphasizes linking project activities to environmental or social receptors, considering significance factors, and covering a range of effect types. They also recommend including impact registers, prediction methods, assessment criteria, and separating pre- and post-mitigation effects. However, the draft is illustrative and lacks project-specific data or explicit comparative analysis of environmental effects between alternatives and the proposed project.

**Assessment:** The draft outlines the necessary framework and components for comparing environmental effects of alternatives with the proposed project but does not present actual comparative data or results. It highlights the need for impact registers and detailed assessment criteria but stops short of demonstrating that the main environmental effects of alternatives have been compared with those of the proposed project. Therefore, while the approach is appropriate, the content is incomplete for fully addressing the checklist item.

**Recommended action:** Incorporate project-specific data and a clear comparative analysis of the main environmental effects of each alternative relative to the proposed project. Include detailed impact registers, assessment criteria, and separate pre- and post-mitigation effects to fully address the checklist item.

Sources: 2.4

### 3.1.1 Existing land uses and people using the land described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) outline general guidance on environmental and social baseline assessments, including social, health, cultural heritage, and land use, but do not specifically describe existing land uses or identify the people using the land. There is no direct information or data on current land uses or the demographics or activities of land users in the study area.

**Assessment:** The draft content focuses on methodological approaches, mitigation hierarchies, and types of evidence to be collected (e.g., census data, stakeholder records) but lacks explicit description or presentation of existing land uses and the people using the land. Without this specific information, the checklist item 3.1.1 is not addressed. The absence of concrete data or narrative on land use and land users indicates a gap in the environmental baseline description relevant to this item.

**Recommended action:** Include a dedicated subsection detailing existing land uses and the people using the land, supported by relevant data such as census information, stakeholder consultations, land use maps, and livelihood studies. This should be integrated into the social and land use baseline section to fully address the checklist item.

Sources: 3.1.1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 3.1.2 Topography, geology, and soils described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes general guidance on environmental and social baseline sections, including study area, methods, sources, limitations, and various environmental components such as physical environment, biodiversity, social aspects, and sensitive receptors. However, there is no specific description or information related to topography, geology, or soils in the content provided.

**Assessment:** The draft content does not contain any direct or indirect information describing the topography, geology, or soils of the project area. The sections focus on procedural and methodological guidance rather than substantive

environmental baseline data. Therefore, the checklist item 3.1.2 is not addressed in the supplied content.

**Recommended action:** Include a dedicated subsection describing the topography, geology, and soils of the project area, supported by field surveys, maps, and specialist studies as appropriate. This should provide baseline data necessary for impact assessment and mitigation planning.

Sources: 3.1.2

### 3.1.3 Significant topographic/geological features and soil conditions (quality, stability, erosion, contamination) described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided draft sections (5.1 to 5.5) focus on study area, methods, sources, limitations, physical environment, biodiversity, social aspects, and sensitive receptors, but do not specifically describe significant topographic or geological features, nor soil conditions such as quality, stability, erosion, or contamination.

**Assessment:** The draft content lacks any direct description or assessment of topographic or geological features and soil conditions relevant to the project area. There is no mention of soil quality, stability, erosion potential, or contamination status. Without this information, the checklist item 3.1.3 is not addressed. The content mainly outlines general assessment approaches and mitigation hierarchies but does not provide the environmental baseline data required for this item.

**Recommended action:** Include a dedicated subsection describing the significant topographic and geological features of the project area, along with detailed information on soil conditions including quality, stability, erosion risks, and contamination status. Support this with relevant field survey data, specialist studies, and maps.

Sources: 3.1.3

### 3.1.4 Fauna, flora, and habitats described and mapped?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes sections on study area, methods, physical environment, biodiversity and ecosystem services, social and cultural aspects, and sensitive receptors. However, there is no specific information or description regarding fauna, flora, or habitats, nor any mapping of these elements.

**Assessment:** The draft does not contain any direct description or mapping of fauna, flora, or habitats. While it mentions biodiversity and ecosystem services in section 5.3, it only outlines the expected structure and types of information to include, without providing actual data or maps. Therefore, the checklist item 3.1.4 is not addressed in the supplied content.

**Recommended action:** Include detailed descriptions and mapping of fauna, flora, and habitats based on seasonally appropriate ecological surveys and species records. Provide habitat maps and conservation status information to fully address the checklist item.

Sources: 3.1.4

### 3.1.5 Species populations and protected areas/species defined?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes general guidance on environmental and social baseline sections, including biodiversity and ecosystem services, but does not specifically define or describe species populations or protected areas/species relevant to the project.

**Assessment:** The draft outlines the need for seasonally appropriate ecological surveys, habitat maps, species records, and conservation-status sources under biodiversity and ecosystem services. However, it lacks any specific information or data on species populations or protected areas/species. There is no mention of identified species, their population status, or protected areas within the study area. Therefore, the checklist item 3.1.5 is not addressed in the provided content.

**Recommended action:** Include detailed ecological survey results and mapping that identify species populations and protected areas/species relevant to the project. Provide conservation status and any relevant protection designations to fully address this checklist item.

Sources: 3.1.5

### 3.1.6 Water environment described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) cover study area, methods, physical environment, biodiversity, social aspects, and sensitive receptors, but do not include any description or assessment of the water environment.

**Assessment:** The draft content lacks any specific information or discussion related to the water environment such as surface water, groundwater, hydrology, water quality, or aquatic ecosystems. There is no mention of water environment baseline data, potential impacts, or mitigation measures. Therefore, the checklist item 3.1.6 regarding description of the water environment is not addressed in the supplied content.

**Recommended action:** Include a dedicated subsection describing the water environment baseline conditions, potential impacts, and mitigation measures. Provide relevant data, maps, and references to specialist studies or surveys on water resources.

Sources: 3.1.6

### 3.1.7 Hydrology, water quality, and water uses described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) do not contain any specific information or description related to hydrology, water quality, or water uses. There is no mention of water bodies, hydrological data, water quality parameters, or water use patterns in the study area.

**Assessment:** The draft focuses on general environmental baseline topics such as physical environment, biodiversity, social aspects, and sensitive receptors, but lacks any content addressing hydrology or water-related issues. Without explicit description or data on hydrology, water quality, or water uses, the checklist item 3.1.7 is not supported by the provided content.

**Recommended action:** Include a dedicated subsection describing the hydrology, water quality, and water uses in the project area, supported by relevant data and studies. Add commitments and monitoring plans related to water resources as per the general guidance in the draft.

Sources: 3.1.7

### 3.1.8 Local climate, meteorology, and air quality described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) cover study area, methods, physical environment, biodiversity, social aspects, and sensitive receptors, but do not include any description or data related to local climate, meteorology, or air quality.

**Assessment:** The draft lacks any specific information or discussion on local climate conditions, meteorological data, or air quality parameters. These are critical components for understanding the environmental baseline and potential impacts of the project. Without this information, the EIA cannot adequately assess potential effects related to air emissions, weather patterns, or climate influences.

**Recommended action:** Include a dedicated subsection in the environmental baseline that provides detailed descriptions and data on local climate, meteorology, and air quality. Incorporate relevant monitoring data, specialist studies, and authoritative sources to support the assessment. Define commitments for ongoing monitoring and management of air quality and meteorological factors.

Sources: 3.1.8

### 3.1.9 Existing noise climate described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) do not contain any information or description related to the existing noise climate. There is no mention of noise measurements, baseline noise levels, noise sources, or any noise-related environmental baseline data.

**Assessment:** The draft focuses on general environmental baseline topics such as physical environment, biodiversity, social and cultural aspects, and sensitive receptors, but it lacks any specific content addressing the existing noise climate. Without baseline noise data or description, the EIA cannot adequately assess potential noise impacts or plan mitigation measures related to noise.

**Recommended action:** Include a dedicated subsection describing the existing noise climate with baseline noise measurements, sources, and relevant standards. Add commitments for noise monitoring and mitigation as appropriate.

Sources: 3.1.9

### 3.1.10 Existing light, heat, and electromagnetic radiation described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) focus on study area, methods, physical environment, biodiversity, social aspects, and sensitive receptors, but do not mention or describe existing light, heat, or electromagnetic radiation conditions.

**Assessment:** The draft content lacks any specific information or data regarding baseline levels or descriptions of existing light, heat, or electromagnetic radiation in the environment likely to be affected by the project. These parameters are important for assessing potential impacts related to artificial lighting, thermal emissions, or electromagnetic interference. Without this information, the EIA cannot adequately evaluate potential effects or propose mitigation measures related to these factors.

**Recommended action:** Include a dedicated subsection in the environmental baseline describing existing conditions of light, heat, and electromagnetic radiation, supported by field measurements or credible data sources. This should cover ambient levels, sources, spatial and temporal variations, and relevance to sensitive receptors.

Sources: 3.1.10

### 3.1.11 Material assets (buildings, minerals, water resources) described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) focus on study area, methods, physical environment, biodiversity, social aspects, and sensitive receptors, but do not specifically describe material assets such as buildings, minerals, or water resources.

**Assessment:** The draft content does not include any description or assessment of material assets like buildings, minerals, or water resources. There is no mention of these assets in the baseline environmental description or in the evidence and limitations sections. Therefore, the checklist item 3.1.11 is not addressed in the provided content.

**Recommended action:** Include a dedicated subsection describing material assets (buildings, minerals, water resources) within the project area, supported by relevant surveys, maps, and studies to fully address this checklist item.

Sources: 3.1.11

### 3.2.1 Archaeological, historic, architectural, or cultural features described (including protected sites)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) cover study area, physical environment, biodiversity, social and cultural heritage, and sensitive receptors, but none specifically describe archaeological, historic, architectural, or cultural features including protected sites. There is no mention or description of such features in the draft content.

**Assessment:** The draft content lacks any direct reference to archaeological, historic, architectural, or cultural features, which are critical to address checklist item 3.2.1. Although section 5.4 mentions cultural heritage generally, it does not provide descriptions or assessments of specific features or protected sites. Therefore, the checklist item is not addressed in the current draft.

**Recommended action:** Include a dedicated subsection describing archaeological, historic, architectural, and cultural features within the project area, supported by specialist surveys and consultation with relevant authorities. Provide details on protected sites and their status, and incorporate commitments for mitigation and monitoring as appropriate.

Sources: 3.2.1

### 3.2.2 Demographic, social, and socio-economic conditions described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft includes sections on environmental and social baseline, with subsections on physical environment, biodiversity, and social, health, cultural heritage and land use. However, there is no specific information or data describing demographic, social, or socio-economic conditions relevant to the project area.

**Assessment:** The draft outlines general approaches and types of information to include in environmental and social baseline assessments, but it lacks any actual demographic, social, or socio-economic data or descriptions. There is no mention of population characteristics, social structures, economic activities, or related baseline conditions. Therefore, the checklist item 3.2.2 is not addressed in the provided content.

**Recommended action:** Include a dedicated subsection or content that provides detailed demographic, social, and socio-economic baseline information for the study area, supported by relevant data sources such as census data, livelihood surveys, and stakeholder consultations.

Sources: 3.2.2

### 3.2.3 Future changes in the environment without the project (No Project / Moving Baseline) described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) cover study area, methods, sources, limitations, physical environment, biodiversity, social aspects, and sensitive receptors including future baseline. However, none explicitly describe or analyze future changes in the environment without the project (the no project or moving baseline scenario).

**Assessment:** The draft includes a section on 'Sensitive Receptors and Future Baseline' (5.5) which might be the most relevant to future environmental conditions, but it does not explicitly address or describe the future environmental changes expected without the project. There is no clear discussion or evidence of a no project scenario or moving baseline analysis, which is critical to understand the context for impact assessment. This is a key omission for item 3.2.3.

**Recommended action:** Include a dedicated subsection that explicitly describes the future environmental conditions expected without the project, supported by relevant data or projections. This should cover anticipated changes due to natural processes, other developments, or trends, to establish a moving baseline for impact assessment.

Sources: 3.2.3

### 3.3.1 Study area defined widely enough?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) discuss assessment responses, mitigation hierarchies, information to include, and evidence and limitations for various environmental baseline topics. However, none explicitly define or discuss the study area extent or whether it is defined widely enough for the environmental impact assessment.

**Assessment:** The draft content lacks any direct mention or description of the study area boundaries or rationale for their extent. There is no evidence that the study area has been defined or justified as sufficiently wide to capture all relevant environmental and social factors potentially affected by the project. Without this, the checklist item 3.3.1 cannot be considered addressed.

**Recommended action:** Include a clear and detailed description of the study area boundaries with justification for their extent to ensure it is sufficiently wide to capture all relevant environmental and social factors potentially affected by the project. Provide maps or coordinates and explain how the study area relates to the project footprint and potential impact zones.

Sources: 3.3.1

### 3.3.2 All relevant agencies contacted?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) focus on study area, methods, sources, limitations, physical environment, biodiversity, social aspects, and sensitive receptors. They mention the need for consultation records and permits but do not explicitly state that all relevant agencies have been contacted or provide evidence of such contact.

**Assessment:** The draft includes references to consultation records as part of evidence and limitations but lacks explicit mention or documentation of contacting all relevant agencies. Without specific statements or records confirming agency engagement, the checklist item is not adequately addressed.

**Recommended action:** Include a dedicated section or appendix listing all relevant agencies contacted, dates and methods of contact, and summaries of their input or responses to demonstrate compliance with this checklist item.

Sources: 3.3.2

### 3.3.3 Sources of data adequately referenced?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft provides general guidance on types of evidence and data sources relevant to environmental baseline sections, such as project design drawings, field survey records, permits, specialist studies, consultation records, ecological surveys, habitat maps, species records, census and livelihood data, and stakeholder records. However, it does not explicitly reference or cite specific data sources used in the assessment, nor does it demonstrate adequate referencing of these sources.

**Assessment:** While the draft outlines the kinds of data and evidence that should be included and referenced, it lacks explicit citations or references to actual data sources. Adequate referencing requires clear identification and citation of data sources to support the environmental description. The absence of such referencing means the checklist item is only weakly addressed, as the presence of data types alone does not confirm adequate referencing.

**Recommended action:** Include explicit citations and references for all data sources used in the environmental baseline description to ensure transparency and verifiability.

Sources: 3.3.3

### 3.3.4 Survey methods, difficulties, and uncertainties described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided draft sections (5.1 to 5.5) describe general assessment responses, mitigation hierarchies, information to include, and types of evidence and limitations for various environmental baseline topics. However, none of these sections explicitly describe survey methods, difficulties encountered during surveys, or uncertainties related to survey data.

**Assessment:** The draft content outlines the structure and types of information expected in environmental baseline assessments but lacks specific details on survey methodologies, challenges faced during data collection, or uncertainties inherent in the survey results. Without explicit mention or description of survey methods, difficulties, or uncertainties, the checklist item 3.3.4 is not addressed in the provided content.

**Recommended action:** Include a dedicated subsection detailing the survey methods employed, any difficulties or limitations experienced during data collection, and an assessment of uncertainties affecting the survey findings to fully address checklist item 3.3.4.

Sources: 3.3.4

### 3.3.5 Methods appropriate for the purpose?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) outline general expectations for study area, methods, sources, limitations, and mitigation commitments but do not specify or describe the methods used for environmental assessment. There is no detailed description or evaluation of the appropriateness of methods applied for the purpose of the environmental baseline description.

**Assessment:** The draft content focuses on the structure and types of information to include, such as commitments registers, monitoring details, and evidence types, but lacks any concrete description or justification of the methods employed. Without explicit mention of methods or their appropriateness, the checklist item regarding whether methods are appropriate for the purpose is not addressed. The routed source chunks are unrelated to environmental assessment methods and do not provide relevant information.

**Recommended action:** Include a detailed description of the methods used for environmental baseline studies, explaining why they are appropriate for the project context and objectives. Provide justification for method selection, any limitations encountered, and how these methods ensure reliable and relevant data collection.

Sources: 3.3.5; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

### 3.3.6 Important data gaps identified and how they were handled explained?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (5.1 to 5.5) include general guidance on study area, methods, sources, limitations, and types of evidence to be included for various environmental components. However, there is no explicit mention or explanation of identification of important data gaps or how these gaps were handled in the environmental baseline description.

**Assessment:** The draft sections focus on the types of data and evidence to be collected and the need for commitments and monitoring but do not address the identification or management of data gaps. Without explicit discussion or examples of data gaps and their handling, the checklist item 3.3.6 is not supported by the provided content.

**Recommended action:** Include a dedicated subsection or statements within the environmental baseline description that explicitly identify any important data gaps encountered during data collection and explain the methods or approaches used to handle these gaps (e.g., additional surveys, expert judgment, assumptions). This will improve transparency and robustness of the baseline assessment.

Sources: 3.3.6

### 4.1.1 Scoping process described?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The structured draft includes a section titled '6.1 Scoping and Assessment Methodology' which provides a demonstration scope and general guidance on what to include, such as location figures, project layout, summaries of effects, mitigation, residual effects, and explanation of the approval process. However, it does not explicitly describe the actual scoping process undertaken for the project, such as how key issues were identified, stakeholder involvement in scoping, or the criteria used to define the scope of the assessment.

**Assessment:** While the draft outlines the expected structure and information to include in the scoping and assessment methodology section, it lacks a clear description of the scoping process itself. There is no evidence of a systematic approach to scoping, stakeholder engagement during scoping, or documentation of scoping decisions. This limits the ability to confirm that the scoping process has been adequately described.

**Recommended action:** Include a detailed description of the scoping process, including how key issues were identified, stakeholder engagement during scoping, and the rationale for defining the scope of the assessment. Provide supporting documentation or references to consultation records to demonstrate a robust scoping process.

Sources: 4.1.1

#### 4.1.2 Systematic approach to scoping evident?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft includes multiple sections related to impact assessment (sections 6.1 to 6.5) that mention the need for summarizing effects, mitigation, residual effects, and approval processes. However, there is no explicit description or demonstration of a systematic approach to scoping, such as a defined methodology, criteria for identifying significant effects, or a clear scoping process.

**Assessment:** While the draft outlines the general topics to be covered in the impact assessment and mentions the need for evidence and limitations, it lacks a clear, systematic approach to scoping. There is no detailed explanation of how scoping was conducted, what methods or criteria were used to identify significant effects, or how the scope was refined. This is a critical gap for demonstrating a systematic scoping approach.

**Recommended action:** Include a dedicated subsection explicitly describing the systematic scoping approach, detailing methods, criteria, and decision-making processes used to define the scope of the assessment. Provide evidence of how scoping was conducted and refined, including stakeholder involvement if applicable.

Sources: 4.1.2

#### 4.1.3 Full consultation carried out during scoping?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft and routed source chunks do not contain any information or evidence regarding whether full consultation was carried out during the scoping phase of the EIA process. There is no mention of consultation activities, stakeholder engagement, or records of consultation in the provided content.

**Assessment:** The evaluation of checklist item 4.1.3 requires explicit evidence of full consultation during scoping, such as records of stakeholder engagement, consultation meetings, or summaries of issues raised and responses. The supplied content focuses on general assessment responses and methodology but lacks any details on consultation processes or outcomes during scoping. Therefore, the item cannot be considered addressed based on the current information.

**Recommended action:** Include a dedicated section detailing the consultation process carried out during the scoping phase, including stakeholder identification, engagement methods, issues raised, responses, and commitments. Provide consultation records or summaries as evidence.

Sources: 4.1.3; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

#### 4.1.4 Comments and views of consultees presented?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft and routed source chunks do not contain any information or references regarding the comments and views of consultees. There is no mention of consultation records, summaries of consultee feedback, or how these comments have been incorporated or presented in the assessment.

**Assessment:** The draft sections focus on impact assessments, methodologies, and general project descriptions but lack any explicit content on stakeholder consultation outcomes or presentation of consultee comments and views. Without evidence of consultation feedback being documented or summarized, this checklist item is not addressed.

**Recommended action:** Include a dedicated subsection summarizing the comments and views of consultees, supported by consultation records and demonstrating how these inputs have been considered in the assessment process.

Sources: 4.1.4

#### 4.4.1 Secondary effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) describe various impact assessments including construction, operational, decommissioning impacts, cumulative effects, greenhouse gas emissions, climate risk, and stakeholder engagement. However, none of these sections explicitly mention or describe secondary effects resulting from the project.

**Assessment:** The draft content focuses on primary impacts such as land disturbance, emissions, resource use, and community effects, but does not address secondary or indirect effects that may arise as a consequence of the project. Secondary effects typically include indirect impacts on ecosystems, socio-economic conditions, or other environmental components that are not immediate but result from primary impacts. The absence of any mention or analysis of secondary effects indicates this checklist item is not addressed in the current draft.

**Recommended action:** Include a dedicated subsection or integrate into existing impact assessment sections a clear description and evaluation of secondary effects associated with the project. Provide evidence or references to support the identification and assessment of these effects, and outline any mitigation or management measures.

Sources: 4.4.1

#### 4.4.2 Temporary/short-term effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not explicitly describe or address temporary or short-term effects related to the project. While construction impacts are mentioned generally, there is no specific discussion or description of temporary or short-term effects in the text.

**Assessment:** The draft includes general descriptions of potential impacts such as land disturbance, construction traffic, emissions, and waste, but lacks explicit mention or detailed description of temporary or short-term effects. Without specific content addressing the duration and nature of temporary impacts, the checklist item is not adequately covered.

**Recommended action:** Include a dedicated subsection or paragraphs explicitly describing temporary and short-term effects, their significance, mitigation measures, and residual impacts to fully address this checklist item.

Sources: 4.4.2

#### 4.4.3 Permanent effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not contain any specific information or description regarding permanent effects of the project. The text mainly outlines general assessment scopes, methodology, and types of impacts (construction, operational, decommissioning, accidents) but does not explicitly describe permanent effects or their characterization.

**Assessment:** The draft content lacks explicit discussion or description of permanent effects resulting from the project. While it mentions potential effects related to land disturbance, emissions, waste, biodiversity, and communities, it does not clarify which effects are permanent, their nature, extent, or duration. Therefore, the checklist item regarding permanent effects being described is not supported by the provided content.

**Recommended action:** Include a dedicated subsection or content explicitly describing the permanent effects of the project, detailing their nature, extent, duration, and any mitigation or management measures. Provide supporting evidence such as specialist studies or field survey data to substantiate the description.

Sources: 4.4.3

#### 4.4.4 Long-term effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not contain any specific information or discussion about long-term effects of the project. The text mainly outlines general assessment scopes, potential effects during construction, operation, decommissioning, and other impact categories, but does not explicitly describe or analyze long-term effects.

**Assessment:** The draft content lacks explicit treatment or description of long-term effects related to the project. While it mentions principal potential effects and mitigation measures in general terms, there is no dedicated section or detailed explanation addressing the duration, persistence, or long-term significance of effects. This is a critical gap for a comprehensive EIA, as understanding long-term impacts is essential for informed decision-making and sustainable project management.

**Recommended action:** Include a dedicated section or subsection explicitly describing and assessing the long-term effects of the project, supported by evidence and clear explanations. This should cover the nature, duration, significance, and mitigation of long-term impacts to meet EIA requirements.

Sources: 4.4.4

#### 4.4.5 Ancillary activities effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft and routed source chunks do not contain any specific information or discussion about ancillary activities or their effects related to the project.

**Assessment:** There is no mention or description of ancillary activities effects in the supplied content. The sections focus generally on construction, operational, decommissioning impacts, and other broad impact categories but do not explicitly address ancillary activities. Therefore, the checklist item regarding ancillary activities effects is not supported by the provided text.

**Recommended action:** Include a dedicated subsection describing ancillary activities, their potential environmental and social effects, mitigation measures, and residual impacts to fully address this checklist item.

Sources: 4.4.5

#### 4.4.6 Indirect/consequential development effects described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not contain any specific information or discussion regarding indirect or consequential development effects. There is no mention or description of indirect effects arising from the project, nor any assessment or mitigation measures related to such effects.

**Assessment:** The draft focuses on direct impacts such as construction, operational, decommissioning impacts, cumulative effects, greenhouse gas emissions, climate risk, and stakeholder engagement. However, it lacks any explicit treatment of indirect or consequential development effects, which are important to understand the broader implications of the project beyond immediate direct impacts. Without this, the assessment is incomplete in addressing the full scope of likely significant effects.

**Recommended action:** Include a dedicated section or subsection explicitly addressing indirect and consequential development effects, supported by relevant evidence and analysis. This should cover identification, assessment, mitigation, and residual effects to fully comply with EIA requirements.

Sources: 4.4.6

#### 4.4.7 Cumulative effects with other developments described (including worst-case)?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any specific information or discussion regarding cumulative effects with other developments, including worst-case scenarios. There is no mention of cumulative impact assessment, identification of other developments, or analysis of combined effects.

**Assessment:** The draft content focuses on general impact assessment methodology, construction, operational, decommissioning impacts, and other topics but lacks any explicit treatment of cumulative effects with other developments. Without explicit evidence or discussion on cumulative effects, the checklist item 4.4.7 is not addressed in the provided content.

**Recommended action:** Include a dedicated section that identifies other developments in the vicinity, assesses cumulative effects including worst-case scenarios, and discusses mitigation and residual risks. Provide supporting evidence and references to specialist studies or consultation records.

Sources: 4.4.7

#### 4.4.8 Geographic extent, duration, frequency, reversibility, probability described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not contain any specific information describing the geographic extent, duration, frequency, reversibility, or probability of the likely significant effects of the project. The text is largely illustrative and generic, focusing on the structure and level of explanation expected, without project-specific details or descriptions of these impact characteristics.

**Assessment:** The draft sections focus on general assessment methodology, types of impacts (construction, operational, decommissioning), and procedural elements such as stakeholder engagement and cumulative impacts. However, there is no explicit description or analysis of the geographic extent, duration, frequency, reversibility, or probability of effects, which are critical for understanding the significance and management of impacts. Without these details, the assessment lacks essential information to fully evaluate the likely significant effects.

**Recommended action:** Include detailed descriptions and analyses of the geographic extent, duration, frequency, reversibility, and probability of the likely significant effects in the impact assessment sections to fully address this checklist item.

Sources: 4.4.8

#### 4.5.1 Primary and secondary effects on human health and welfare described/quantified?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) describe general assessment methodologies, impacts (construction, operational, decommissioning), cumulative effects, climate considerations, and stakeholder engagement for the TIERS Limited project. However, none of these sections explicitly describe or quantify primary and secondary effects on human health and welfare.

**Assessment:** The draft content focuses on general impact categories such as land disturbance, emissions, biodiversity, and community concerns but lacks specific analysis or quantification of direct (primary) or indirect (secondary) effects on human health and welfare. There is no mention of health risk assessments, exposure pathways, health outcome predictions, or welfare impacts. Therefore, the checklist item regarding primary and secondary effects on human health and welfare is not addressed in the provided content.

**Recommended action:** Include a dedicated section that explicitly describes and quantifies the primary and secondary effects of the project on human health and welfare. This should incorporate specialist health risk assessments, exposure analysis, and consideration of social and economic welfare impacts, along with proposed mitigation measures.

Sources: 4.5.1

#### 4.5.2 Impacts on biodiversity, climate change, and sustainable development discussed?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The draft sections repeatedly mention potential effects related to biodiversity and emissions, implying some consideration of biodiversity and climate change impacts. However, there is no explicit discussion or detailed assessment of impacts on biodiversity, climate change, or sustainable development. The content is largely illustrative and generic, lacking project-specific analysis or mitigation measures related to these topics.

**Assessment:** The provided draft content does not explicitly address impacts on biodiversity, climate change, or sustainable development in a detailed or structured manner. While biodiversity and emissions are mentioned as potential effects, there is no substantive discussion or evidence of assessment, mitigation, or residual effects related to these issues. The draft appears to be a template or illustrative example rather than a completed assessment for these specific impacts.

**Recommended action:** Develop detailed, project-specific sections explicitly addressing impacts on biodiversity, climate change, and sustainable development. Include evidence from specialist studies, mitigation strategies, and residual effect summaries to fully address this checklist item.

Sources: 4.5.2

#### 4.6.1 Significance discussed in terms of legal compliance and sensitivity of receptors?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not contain any explicit discussion or analysis of impact significance in terms of legal compliance or sensitivity of receptors. The text mainly provides illustrative responses about project impacts, mitigation, and assessment methodology without specific reference to legal frameworks or receptor sensitivity.

**Assessment:** The draft lacks any direct mention or evaluation of legal compliance related to environmental impacts or the sensitivity of receptors (such as protected species, vulnerable communities, or critical habitats). Without this, the assessment does not meet the checklist requirement to discuss significance in these terms. This is a critical gap as legal compliance and receptor sensitivity are fundamental to determining impact significance in an EIA.

**Recommended action:** Include a dedicated section that explicitly discusses impact significance in the context of applicable legal requirements and the sensitivity of identified receptors. This should reference relevant laws, standards, and receptor characteristics to justify significance conclusions.

Sources: 4.6.1

#### 4.6.2 Appropriate standards and guidance used?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections (6.1 to 11.2) do not explicitly mention or demonstrate the use of appropriate standards and guidance in the assessment methodology or impact evaluation. There is no direct reference to specific standards, guidelines, or regulatory frameworks applied in the EIA process.

**Assessment:** The draft content focuses on general descriptions of assessment scope, potential effects, mitigation measures, and documentation requirements but lacks explicit mention of the standards or guidance documents used to ensure the assessment's appropriateness and compliance. Without such references, it is unclear whether recognized standards or best practices have been followed.

**Recommended action:** Include explicit references to the environmental standards, guidelines, and regulatory requirements used to guide the assessment methodology and impact evaluation. Provide explanations of how these standards were applied to ensure the assessment's appropriateness and compliance.

Sources: 4.6.2

#### 4.6.3 Positive effects described as well as negative?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The provided draft sections repeatedly mention the principal potential effects of the project, including land disturbance, construction traffic, resource use, emissions, waste, biodiversity, and nearby communities. They also mention preferred design and management measures to avoid sensitive areas, control pollution, monitor performance, and provide a route for concerns to be raised and resolved. However, there is no explicit mention or description of positive effects of the project alongside the negative effects.

**Assessment:** The draft content focuses primarily on identifying potential negative impacts and mitigation measures but lacks explicit discussion or description of positive effects or benefits of the project. The checklist item requires that both positive and negative effects be described, but the current content only partially addresses this by focusing on negative effects and mitigation. Therefore, the response is weak in addressing the requirement to describe positive effects as well as negative ones.

**Recommended action:** Include explicit descriptions of positive effects and benefits of the project alongside the negative effects and mitigation measures to fully address the checklist item.

Sources: 4.6.3

#### 4.6.4 Significance of each effect clearly explained?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The draft sections provide a general illustrative response about the project and its potential effects, mentioning land disturbance, traffic, resource use, emissions, waste, biodiversity, and communities. They suggest including simple location figures, summaries of effects and mitigation, and explanation of the approval process. However, there is no specific explanation or clear demonstration of the significance of each effect or how significance is determined or communicated.

**Assessment:** The provided draft content lacks explicit explanation or clear articulation of the significance of each identified effect. While it outlines the types of effects and mentions mitigation and residual effects, it does not clearly explain the criteria or rationale for determining significance, nor does it provide a clear summary of significance for each effect. This is a critical gap for fulfilling the checklist item requirement.

**Recommended action:** Include a dedicated subsection that clearly explains the significance of each identified effect, the criteria used to assess significance, and a plain language summary of the residual significance after mitigation. Ensure this explanation is accessible to non-technical readers and linked to the mitigation measures described.

Sources: 4.6.4

#### 4.7.1 Methods used to predict effects described and justified?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft includes general descriptions of assessment responses for various impact categories and mentions the need for project design drawings, field survey records, permits, specialist studies, and consultation records as evidence. However, it does not specifically describe or justify the methods used to predict effects in the impact assessment sections. There is no detailed explanation of the predictive methodologies, modeling approaches, or justification for their selection.

**Assessment:** The draft provides a broad overview of the assessment scope and types of evidence but lacks explicit detail on the methods used to predict environmental effects. Without clear description and justification of predictive methods, the assessment does not fully meet the checklist requirement. This is a critical gap because understanding the methods is essential for evaluating the reliability and validity of the predicted effects.

**Recommended action:** Include a dedicated subsection that clearly describes the methods used to predict environmental effects, including any modeling or analytical tools, and provide justification for their selection. Discuss assumptions, limitations, and how these methods ensure reliable predictions.

Sources: 4.7.1

#### 4.7.2 Worst-case predictions used where uncertain?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 90%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any information or discussion regarding the use of worst-case predictions where there is uncertainty in the impact assessment.

**Assessment:** The draft sections focus on general impact assessment methodology, construction, operational impacts, decommissioning, cumulative impacts, climate considerations, and stakeholder engagement. However, there is no explicit mention or evidence that worst-case scenario predictions are used to address uncertainty in the assessment of likely significant effects. This is a critical aspect of robust environmental impact assessment to ensure that potential risks are not underestimated.

**Recommended action:** Include a clear statement and explanation in the impact assessment methodology section that worst-case predictions are used where there is uncertainty, supported by examples or references to modeling approaches. This will strengthen the robustness and credibility of the assessment.

Sources: 4.7.2

#### 4.7.3 Difficulties in data compilation acknowledged?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections and routed source chunks do not contain any explicit mention or discussion of difficulties in data compilation or acknowledgment thereof.

**Assessment:** The draft sections focus on general assessment responses, information to include, and evidence and limitations related to various impact categories, but none explicitly address or acknowledge difficulties encountered in compiling data for the EIA. This is a critical aspect to ensure transparency and understanding of data quality and limitations, but it is absent in the provided content.

**Recommended action:** Include a dedicated subsection or statements within the impact assessment sections that explicitly acknowledge any difficulties or limitations encountered in data compilation, including data gaps, uncertainties, and how these were managed or mitigated to inform the assessment conclusions.

Sources: 4.7.3

#### 4.7.4 Level of treatment appropriate to importance?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The structured draft provides general descriptions of assessment responses for various impact categories (construction, operational, decommissioning, cumulative effects, climate, stakeholder engagement) with emphasis on including location figures, summaries of effects and mitigation, and explanation of approval processes. However, it lacks explicit discussion or demonstration of the level of treatment or assessment rigor appropriate to the importance of each identified effect, which is the core of checklist item 4.7.4.

**Assessment:** The draft outlines the expected structure and content for impact assessments but does not explicitly address how the level of treatment or detail in the assessment is calibrated to the significance or importance of the effects. There is no clear evidence of a tiered or prioritized approach to assessment depth or mitigation based on effect importance. This is a critical element for demonstrating proportionality and adequacy in environmental impact assessment.

**Recommended action:** Include a dedicated subsection or statements explicitly describing how the assessment methodology and level of detail are tailored to the importance of each effect. Provide rationale or criteria used to determine assessment depth and mitigation effort proportional to effect significance.

Sources: 4.7.4

#### 4.7.5 Emphasis given to most severe effects?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 80%        | Pending           |

**Evidence:** The structured draft sections repeatedly mention summarizing the most important effects, mitigation, and residual effects in plain language, and providing a simple location figure and project layout. However, there is no explicit mention or emphasis on prioritizing or giving special emphasis to the most severe effects within the impact descriptions or summaries.

**Assessment:** While the draft outlines the need to summarize important effects and mitigation measures, it lacks clear guidance or demonstration that the most severe effects are distinctly emphasized or highlighted. The absence of explicit prioritization or emphasis on severity suggests that this checklist item is only weakly addressed.

**Recommended action:** Include explicit statements and summaries that identify and emphasize the most severe effects, possibly with a ranking or prioritization to guide readers on the relative significance of impacts.

Sources: 4.7.5

## 5.1 Significant adverse effects and potential for mitigation discussed?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The draft sections 7.1 to 7.3 and 8.1 to 8.2 provide illustrative responses on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs. However, these responses are generic, refer to a different jurisdiction (Kuwait) than the project location (Pakistan), and explicitly state that regulatory applicability is unresolved and must be verified. There is no project-specific discussion of significant adverse effects or detailed mitigation measures.

**Assessment:** The draft content lacks project-specific evidence and detailed discussion of significant adverse effects and their potential mitigation. The references to Kuwait regulatory frameworks are not applicable to the project in Pakistan, and the text highlights the need for verification and alignment with local laws before issuance. Therefore, the mitigation description is weak and incomplete for the checklist item requiring discussion of significant adverse effects and mitigation potential.

**Recommended action:** Include a detailed, project-specific discussion of significant adverse effects and corresponding mitigation measures. Verify and document applicable local legal and regulatory requirements. Provide evidence from studies, design, and consultations to support mitigation commitments before finalizing the report.

Sources: 5.1

## 5.2 Effect of mitigation on magnitude and significance explained?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided draft sections (7.1 to 8.2) focus on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs. However, there is no explicit explanation or discussion on the effect of mitigation measures on the magnitude and significance of environmental impacts.

**Assessment:** The draft content does not contain any specific analysis or explanation regarding how mitigation measures influence the magnitude or significance of identified impacts. While mitigation and management plans are mentioned, the critical linkage explaining the effect of mitigation on impact significance is absent. This is a key element for demonstrating the effectiveness of mitigation and for impact significance reassessment.

**Recommended action:** Include a dedicated subsection that explicitly explains the effect of each mitigation measure on the magnitude and significance of environmental and social impacts. Provide evidence or rationale supporting these effects to demonstrate mitigation effectiveness.

Sources: 5.2

## 5.3 Reasons for choosing proposed mitigation explained?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (7.1 to 8.2) focus on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs. However, none of these sections explicitly explain the reasons for choosing the proposed mitigation measures.

**Assessment:** The draft content does not contain any explanation or rationale for why specific mitigation measures were selected. It mainly outlines procedural and administrative aspects of mitigation and monitoring without discussing the decision-making process or justification for the chosen mitigation strategies. Therefore, the checklist item regarding explanation of reasons for choosing proposed mitigation is not addressed.

**Recommended action:** Include a dedicated subsection that clearly explains the reasons for selecting each proposed mitigation measure, including consideration of alternatives and justification based on impact reduction effectiveness and compliance requirements.

Sources: 5.3

## 5.4 Full range of mitigation approaches considered (avoid, reduce, remedy, compensate, etc.)?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The draft sections provided focus on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs. However, there is no explicit discussion or demonstration that the full range of mitigation approaches (avoid, reduce, remedy, compensate, etc.) have been considered or addressed comprehensively.

**Assessment:** The content primarily addresses procedural and administrative aspects of mitigation and environmental management, including legal applicability, responsibilities, and monitoring. It lacks substantive detail on the actual mitigation strategies or a clear demonstration that all mitigation approaches have been evaluated. The references to jurisdictional mismatches and the need for verification further indicate that the mitigation approach coverage is incomplete or illustrative rather than definitive.

**Recommended action:** Include a dedicated section explicitly detailing the full range of mitigation approaches considered, with project-specific examples and justification for chosen measures. Verify and align mitigation strategies with applicable jurisdictional requirements and client standards.

Sources: 5.4

## 5.5 Arrangements to monitor and manage residual impacts proposed?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The draft sections 7 and 8 provide illustrative responses on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs including indicators, methods, locations, thresholds, frequency, reporting, and response. However, these are generic and illustrative, not project-specific, and repeatedly note that regulatory applicability and legal registers must be confirmed by qualified local practitioners. There is no direct evidence of specific arrangements to monitor and manage residual impacts proposed for the project.

**Assessment:** The draft content outlines the expected structure and types of information that should be included to address monitoring and management of residual impacts, such as confirming competent authorities, legal registers, and detailed monitoring plans. However, it lacks concrete, project-specific details or commitments regarding arrangements to monitor and manage residual impacts. The repeated emphasis on the need for verification and alignment with local laws indicates that the current draft does not yet provide sufficient evidence of these arrangements.

**Recommended action:** Develop and include detailed, project-specific arrangements for monitoring and managing residual impacts, including indicators, methods, responsibilities, thresholds, reporting, and response plans. Confirm and document applicable legal and regulatory requirements relevant to the project location to ensure compliance.

Sources: 5.5

## 5.6 Any negative effects of the proposed mitigation described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (7.1 to 8.2) focus on mitigation hierarchy, environmental and social management plans, responsibilities, resources, corrective actions, and monitoring programs. However, none of these sections include any description or discussion of any negative effects of the proposed mitigation measures.

**Assessment:** The draft content does not address whether the proposed mitigation measures themselves have any negative effects. There is no mention or evaluation of potential adverse impacts resulting from the mitigation actions, which is a key aspect of item 5.6. Without this information, the checklist item cannot be considered addressed.

**Recommended action:** Include a dedicated subsection or content that explicitly identifies and discusses any negative effects of the proposed mitigation measures, supported by evidence or specialist studies if available.

Sources: 5.6

## 6.1 Does the EIA include a Non-Technical Summary?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 85%        | Pending           |

**Evidence:** The draft includes a section titled '1.1 Non-Technical Executive Summary' which demonstrates the expected structure and level of explanation for a non-technical summary. It outlines the project scope, activities, and the need to control environmental and social impacts. It also lists information to include such as design basis, layout drawings, and quantified estimates by phase. However, it is noted as an illustrative response with project-specific values requiring verification.

**Assessment:** The draft provides a clear framework and content expectations for a Non-Technical Summary, indicating that such a summary is included in the EIA documentation. However, the content is demonstrative and not project-specific, lacking finalized data and confirmed design details. Therefore, while the presence of a Non-Technical Summary is evident, its completeness and adequacy for decision-making cannot be fully confirmed from the draft alone.

**Recommended action:** Verify and include finalized project-specific data and approved design documents in the Non-Technical Summary to fully address the checklist item.

Sources: 6.1; ShipStation\_V2\_Inventory\_API\_Support\_Summary.docx, page 1

## 6.2 Is it concise but comprehensive (project, environment, effects, mitigation)?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 85%        | Pending           |

**Evidence:** The draft includes a non-technical executive summary that outlines the project scope, activities (construction, commissioning, operation, closure), and the intent to control environmental and social impacts. It mentions the need to confirm final design basis, footprint, schedule, workforce profile, and to include layout drawings and quantitative estimates of materials, water, energy, waste, emissions, and traffic by phase. However, the content is illustrative and lacks project-specific values and detailed mitigation measures.

**Assessment:** The draft provides a structured and concise summary covering the project description, environment, and potential effects. It also references mitigation through controlling impacts over the project lifecycle. However, it remains illustrative without concrete data or comprehensive coverage of all elements. The mitigation discussion is general and not detailed. The summary is concise but not fully comprehensive as it lacks specific quantitative data and detailed mitigation strategies.

**Recommended action:** Incorporate project-specific quantitative data and detailed mitigation measures to enhance comprehensiveness. Include approved layout drawings and a clear summary of residual impacts to fully address the checklist item.

Sources: 6.2

## 6.3 Does it explain the development consent process and role of EIA?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft for the Non-Technical Summary sections 1.1 and 1.2 does not contain any explanation of the development consent process or the role of the EIA.

**Assessment:** The draft focuses on project description, impacts, mitigation, and decision readiness but lacks any mention or explanation of the development consent process or how the EIA fits into that process. This is a critical element for a non-technical summary to help stakeholders understand the regulatory context and decision-making framework.

**Recommended action:** Include a clear, non-technical explanation of the development consent process and the role of the EIA within that process in the Non-Technical Summary section to meet checklist requirements.

Sources: 6.3

## 6.4 Does it provide an overview of the assessment approach?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The provided draft includes a non-technical executive summary describing the project scope, phases, and general environmental and social interactions. However, it lacks a clear, explicit overview of the assessment approach itself, such as methodologies, criteria, or steps taken in the assessment process.

**Assessment:** While the draft outlines the project activities and impacts, it does not explicitly provide an overview of the assessment approach. There is no description of how the assessment was conducted, what methods or frameworks were used, or how data was gathered and analyzed. This is a critical element for transparency and understanding of the EIA process, and its absence weakens the completeness of the non-technical summary.

**Recommended action:** Include a clear and concise overview of the assessment approach in the non-technical summary, detailing the methodologies, criteria, and process steps used to conduct the environmental and social impact assessment.

Sources: 6.4

## 6.5 Is it written in non-technical language?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 85%        | Pending           |

**Evidence:** The draft includes a non-technical executive summary section that describes the project scope, activities, and impacts in general terms. It mentions the need to control environmental and social impacts through the project lifecycle and outlines information to include such as design basis, layout drawings, and quantification of resources and emissions. However, the language used includes technical terms like 'footprint', 'workforce profile', 'emissions', and 'thresholds' which may not be fully accessible to a non-technical audience.

**Assessment:** While the draft demonstrates an attempt to provide a non-technical summary by describing the project and its impacts in broad terms, the presence of technical jargon and lack of simplified explanations suggest that the language may not be fully non-technical. The summary appears more illustrative and requires project-specific verification and simplification to ensure accessibility to non-technical readers.

**Recommended action:** Revise the executive summary to replace technical terms with plain language and include explanations or analogies to improve accessibility for non-technical readers. Verify with target audience feedback to ensure clarity.

Sources: 6.5

## 7.1 Relevant Kuwait regulations (KEPA, Ministry of Oil, etc.) provided?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections focus on general regulatory framework topics such as applicable national and local requirements, international standards, permits, approvals, compliance obligations, and compliance

matrices. However, there is no specific mention or evidence of relevant Kuwait regulations, including those from KEPA or the Ministry of Oil, or any project-specific references to Kuwait regulatory frameworks.

**Assessment:** The draft content does not address the checklist item 7.1 regarding relevant Kuwait regulations. The sections appear to be illustrative and generic, referencing a different location (Pakistan / MIOSUMER BOULAVARD) and do not include any Kuwait-specific regulatory information or documentation. Therefore, the checklist item is not supported by the provided content.

**Recommended action:** Include a dedicated section or content explicitly listing and describing the relevant Kuwait regulations applicable to the project, including KEPA and Ministry of Oil requirements. Provide evidence such as permits, approvals, or compliance documentation specific to Kuwait to fully address this checklist item.

Sources: 7.1

## 7.2 Applicable environmental standards discussed (Noise, Air, Effluent, Waste, Soil, Biodiversity, etc.)?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft sections 3.1 to 3.3 and 12.1 to 12.2 discuss the regulatory framework broadly, including national and local requirements, international standards, permits, approvals, and compliance obligations. However, there is no specific mention or detailed discussion of applicable environmental standards related to noise, air, effluent, waste, soil, biodiversity, or other environmental media.

**Assessment:** While the draft outlines the need to cover baseline environmental conditions and regulatory requirements, it lacks explicit identification or discussion of specific environmental standards applicable to noise, air quality, effluent discharge, waste management, soil protection, biodiversity conservation, or similar areas. The absence of these details means the checklist item is not fully addressed. The draft appears to be a template or illustrative response without project-specific values or standards referenced, which weakens its adequacy for this checklist item.

**Recommended action:** Include a detailed section listing and discussing all applicable environmental standards relevant to the project, such as noise limits, air quality standards, effluent discharge criteria, waste management regulations, soil protection guidelines, and biodiversity conservation requirements. Provide references to national and local regulations, international standards if applicable, and demonstrate how the project complies with or plans to meet these standards.

Sources: 7.2

## 7.3 KOC HSE MS Policy, Vision & Mission clearly described?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (3.1 to 3.3 and 12.1 to 12.2) focus on national/local requirements, international standards, permits, approvals, compliance obligations, and compliance matrices. However, there is no mention or description of the KOC HSE MS Policy, Vision, or Mission within these sections.

**Assessment:** The draft content does not include any information about the KOC HSE Management System Policy, Vision, or Mission. These elements are critical to understanding the project's health, safety, and environmental management framework and should be clearly described to meet the checklist item requirements. Without explicit references or descriptions, the checklist item cannot be considered addressed.

**Recommended action:** Include a dedicated subsection that clearly describes the KOC HSE Management System Policy, Vision, and Mission statements. Provide context on how these elements integrate into the project's HSE management and compliance framework.

Sources: 7.3

## 7.4 Applicable features of KOC EIA Procedure implemented?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (3.1, 3.2, 3.3, 12.1, 12.2) discuss national/local requirements, international standards, permits, approvals, compliance obligations, and compliance matrix requirements generally, but do not specifically mention or demonstrate implementation of the Kuwait Oil Company (KOC) EIA Procedure or its applicable features.

**Assessment:** The draft content lacks any direct reference to the KOC EIA Procedure or evidence that its applicable features have been identified and implemented in the project. Without explicit mention or demonstration of adherence to KOC-specific EIA procedural requirements, the checklist item cannot be considered addressed. The content focuses on general regulatory frameworks and compliance processes but does not confirm alignment with KOC EIA Procedure.

**Recommended action:** Include a dedicated section explicitly identifying the applicable features of the KOC EIA Procedure and provide evidence of their implementation within the project. This should include references to permits, approvals, compliance documentation, and a compliance matrix demonstrating adherence to KOC EIA requirements.

Sources: 7.4

## 7.5 Relevant HSE MS Procedures utilized or referenced?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft sections (3.1 to 3.3 and 12.1 to 12.2) focus on national and local requirements, international standards, permits, approvals, compliance obligations, and compliance matrix but do not mention or reference any Health, Safety, and Environmental Management System (HSE MS) procedures utilized or referenced for the project.

**Assessment:** There is no explicit mention or discussion of relevant HSE MS procedures in the supplied content. The sections address regulatory frameworks, permits, and compliance but lack any reference to specific HSE MS procedures or their application in the project context. Therefore, the checklist item regarding relevant HSE MS procedures being utilized or referenced is not supported by the provided draft.

**Recommended action:** Include a dedicated subsection or content explicitly detailing the relevant HSE MS procedures that are utilized or referenced for the project. This should include how these procedures align with regulatory requirements and project commitments, and provide references to the specific HSE MS documents or standards.

## 8.1 Information available in clearly defined document(s)?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 80%        | Pending           |

**Evidence:** The structured draft provides a detailed outline of the EIA document sections, including executive summary, project description, policy framework, and other relevant topics. Each section includes an 'Assessment response' that demonstrates the expected structure and level of explanation, along with lists of information to include and evidence and limitations. This indicates that the information is organized into clearly defined documents or sections, with guidance on content and evidence. However, the draft is illustrative and notes that project-specific values require verification. There is no explicit confirmation that the final EIA documents are compiled into clearly defined, finalized documents ready for review.

**Assessment:** The draft shows a well-structured approach to presenting EIA information, with clear sectioning and guidance on content and evidence. This suggests that the information is intended to be available in clearly defined documents. However, since the draft is illustrative and lacks confirmation of finalization or compilation into a single or set of clearly defined documents, the adequacy is partial rather than full. The absence of routed source chunks or linked source notes further limits confirmation.

**Recommended action:** Verify that the final EIA submission includes clearly defined, finalized documents with appropriate formatting, indexing, and document control to ensure clarity and accessibility for reviewers.

Sources: 8.1

## 8.2 Logically organized and clearly structured?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 85%        | Pending           |

**Evidence:** The structured draft provides a clear hierarchical organization with numbered sections and subsections, each with headings and subheadings such as 'Assessment response', 'Information to include in the controlled issue', and 'Evidence and limitations'. This indicates an attempt at logical organization and clear structure. However, the content is repetitive across sections, with many subsections repeating the same text about alternatives assessment and evidence requirements without project-specific details or clear differentiation between sections. There is also an abrupt cutoff in the last section, suggesting incomplete content.

**Assessment:** The draft shows a logical framework and consistent formatting, which supports clarity and organization. However, the repetitive nature of the text and lack of project-specific details reduce the effectiveness of the structure. The absence of unique content per section and incomplete ending weaken the overall presentation quality. The draft would benefit from more distinct, detailed content per section and completion of truncated text to fully demonstrate logical organization and clear structure.

**Recommended action:** Revise the draft to include project-specific information and reduce repetitive text. Complete all sections fully and consider adding summaries or transitions to enhance logical flow and clarity.

Sources: 8.2

### 8.3 Table of contents present?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft does not include any mention or presentation of a table of contents for the EIA document. There is no section or subsection that lists or references a table of contents.

**Assessment:** The checklist item 8.3 requires confirmation that a table of contents is present in the EIA document. The supplied draft content includes various sections and subsections with headings and assessment responses, but there is no explicit table of contents or indication that one is included. Without a table of contents, navigation and overview of the document structure would be hindered, which is a key aspect of quality presentation.

**Recommended action:** Include a clearly structured table of contents at the beginning of the EIA document that lists all major sections and subsections with page numbers or links to facilitate navigation and review.

Sources: 8.3

### 8.4 Clear description of process followed?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The structured draft includes multiple sections describing project scope, activities, alternatives assessment, and information to include such as design basis, layout, schedule, workforce profile, and environmental considerations. However, there is no explicit, clear, and step-by-step description of the process followed for the EIA preparation or assessment. The draft mostly outlines what information should be included and the context but lacks a clear narrative or flowchart of the process followed.

**Assessment:** The draft provides a broad overview of the project and the types of information to be included in various sections, but it does not clearly describe the process followed in preparing the EIA. There is no detailed explanation of the methodology, sequence of steps, stakeholder engagement process, or decision-making framework. This makes it difficult to understand how the assessment was conducted from start to finish.

**Recommended action:** Include a dedicated section or subsection that clearly outlines the process followed in preparing the EIA, including methodology, stakeholder engagement, assessment steps, and decision-making framework to improve clarity and transparency.

Sources: 8.4

### 8.5 Comprehensive but concise?

| Status              | Adequacy            | Confidence | Reviewer decision |
|---------------------|---------------------|------------|-------------------|
| Partially Compliant | Partially Addressed | 85%        | Pending           |

**Evidence:** The structured draft provides illustrative responses for multiple sections of the EIA, demonstrating expected structure and level of explanation. It emphasizes the need for concise yet comprehensive information, including project design, impacts, mitigation, alternatives, and compliance. However, the content is largely demonstrative and requires project-specific values and verification. There is no explicit statement or evaluation confirming that the entire EIA is both comprehensive and concise as a whole.

**Assessment:** The draft shows an organized approach with clear headings and structured information, which supports clarity and conciseness. It includes key elements expected in an EIA, suggesting comprehensiveness. However, the responses are illustrative and lack finalized, project-specific data, which limits the ability to fully assess comprehensiveness and conciseness. The absence of explicit summary or evaluation on the overall quality of presentation leaves the checklist item only partially addressed.

**Recommended action:** Include a clear summary statement confirming that the EIA is comprehensive but concise, supported by finalized project-specific data. Conduct a review to ensure no unnecessary repetition or excessive detail, and document this in the presentation quality section.

Sources: 8.5

## 8.6 Effective use of tables, figures, maps, photos?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The structured draft includes multiple sections with references to project design drawings, field survey records, permits, specialist studies, and consultation records. However, there is no explicit mention or demonstration of the effective use of tables, figures, maps, or photos within the draft content provided. The draft outlines the types of information to include but does not show actual visual aids or their effective integration.

**Assessment:** While the draft references the inclusion of drawings and maps as part of the evidence and information to include, it lacks concrete examples or descriptions of how these visual elements are effectively used to enhance understanding. The absence of actual tables, figures, maps, or photos or commentary on their clarity, relevance, or integration weakens the assessment of this checklist item.

**Recommended action:** Include and clearly reference tables, figures, maps, and photos within the EIA document. Ensure these visual aids are well-labeled, relevant, and effectively integrated to support the narrative and improve reader comprehension.

Sources: 8.6

## 8.7 Effective use of annexes/appendices?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Pending           |

**Evidence:** The provided structured draft and routed source chunks do not contain any information regarding the use of annexes or appendices in the EIA document. There is no mention of annexes or appendices, their content, or how effectively they are used to support the main text.

**Assessment:** The evaluation of effective use of annexes or appendices requires evidence of their inclusion, relevance, clarity, and how they complement the main EIA report. Since the supplied content lacks any reference or example of annexes or appendices, it is not possible to assess this checklist item.

**Recommended action:** Include a dedicated section or references to annexes and appendices in the EIA report. Provide a clear list and description of annexes/appendices, demonstrating their relevance and effective use to support the main text.

Sources: 8.7

## 8.8 All analyses and conclusions supported by evidence?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 85%        | Pending           |

**Evidence:** The structured draft provides general statements about the types of evidence that should be included, such as project design drawings, field survey records, permits, specialist studies, and consultation records. However, it does not present specific analyses or conclusions supported by concrete evidence within the text. The draft repeatedly notes that project-specific values require verification and that final quantities and thresholds must be confirmed against approved data, indicating that the current content is illustrative rather than definitive.

**Assessment:** The draft outlines the expected structure and types of evidence that should support analyses and conclusions but lacks actual evidence or detailed analyses within the provided content. There is an emphasis on the need for verification and confirmation of data, suggesting that the current document is a template or demonstration rather than a finalized assessment. Therefore, the item 'All analyses and conclusions supported by evidence' is only weakly addressed, as the necessary supporting evidence and detailed analyses are not explicitly included or demonstrated in the draft.

**Recommended action:** Include detailed, project-specific analyses and clearly link all conclusions to supporting evidence such as survey data, specialist studies, and permits. Ensure that all data are verified and final, and document any assumptions or limitations to strengthen the support for conclusions.

Sources: 8.8

## 8.9 Consistent terminology used?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 90%        | Pending           |

**Evidence:** The structured draft provides multiple sections with assessment responses and information to include, but none explicitly address the use of consistent terminology throughout the document. There is no direct mention or demonstration of terminology consistency or a glossary to ensure uniform language use.

**Assessment:** The draft includes detailed guidance on content and evidence for various sections but lacks explicit reference to consistent terminology usage. Consistent terminology is critical for clarity and comprehension in an EIA report, yet the draft does not show evidence of this being addressed or monitored. This is a notable gap in the quality of presentation.

**Recommended action:** Include a dedicated section or statement on consistent terminology use, provide a glossary of terms, and implement a review process to ensure terminology consistency throughout the EIA document.

Sources: 8.9

## 8.10 Reads as a single document with good cross-referencing?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 80%        | Pending           |

**Evidence:** The structured draft provides multiple sections with headings and content that appear to be part of a single document, including references to section contexts and consistent formatting. However, there is no explicit mention or demonstration of good cross-referencing between sections or within the document. The draft shows repeated content in some sections, which may indicate a lack of cohesive integration. There is no clear evidence of hyperlinks, references, or navigational aids that would support the claim of good cross-referencing.

**Assessment:** While the draft is organized into sections and subsections, the absence of explicit cross-referencing or navigational elements weakens the presentation quality. The repetition of similar content across different sections suggests that the document may not read seamlessly as a single integrated document. Good cross-referencing typically involves clear pointers between related sections, which is not evident here. Therefore, the quality of presentation regarding reading as a single document with good cross-referencing is weak based on the provided content.

**Recommended action:** Enhance the document by adding explicit cross-references between related sections, reduce repetitive content, and include navigational aids such as a table of contents or hyperlinks to improve the flow and integration of the document.

Sources: 8.10

## 8.11 Presentation fair, impartial, and objective?

| Status            | Adequacy | Confidence | Reviewer decision |
|-------------------|----------|------------|-------------------|
| Needs Improvement | Weak     | 80%        | Pending           |

**Evidence:** The provided structured draft includes multiple sections describing the project, its impacts, mitigation measures, and regulatory context. However, there is no explicit statement or discussion regarding the fairness, impartiality, or objectivity of the presentation of the EIA information. The draft focuses on content scope and information to include but does not address presentation quality or bias.

**Assessment:** The draft demonstrates thoroughness in covering project description, impacts, and regulatory frameworks but lacks any explicit assurance or evidence that the presentation is fair, impartial, and objective. Without statements on methodology transparency, balanced reporting, or avoidance of bias, the checklist item is weakly addressed.

**Recommended action:** Include a dedicated section or statements affirming that the EIA presentation is fair, impartial, and objective, supported by transparent methodology, balanced reporting, and acknowledgment of assumptions and limitations.

Sources: 8.11

### 1.1.1 Are the need and objectives of the project explained?

| Status  | Adequacy | Confidence | Reviewer decision |
|---------|----------|------------|-------------------|
| Missing | Missing  | 95%        | Retained          |

**Evidence:** The provided structured draft sections focus on project description elements such as alternatives assessment, project components, construction, inputs/outputs, programme, and cumulative impacts. However, none explicitly explain or demonstrate the need and objectives of the project. The routed source chunks are unrelated to the project need or objectives, focusing instead on API support for ShipStation.

**Assessment:** The draft content lacks any direct explanation or description of the project's need or objectives. While it outlines the structure and information to include for project description and alternatives assessment, it does not provide actual content or evidence that the need and objectives have been explained. The routed source chunks are irrelevant to the checklist item. Therefore, the checklist item is not addressed in the provided content.

**Recommended action:** Include a dedicated subsection clearly explaining the need for the project and its objectives, supported by relevant background information and rationale.

# REVIEWER DETERMINATION

Final approval remains with the authorised human reviewer

This AI-assisted review does not constitute regulatory approval. Findings may only be closed or retained by an authorised reviewer after examining the revised content and supporting evidence.

| Role                 | Name | Decision / signature | Date |
|----------------------|------|----------------------|------|
| EIA Lead             |      |                      |      |
| Independent Reviewer |      |                      |      |
| Project Director     |      |                      |      |
